

Chapter 02 Biological Beginnings

Multiple Choice Questions

1.

Red-feathered and blue-feathered birds occupy the same environment. The birds with the red feathers are better able to survive and avoid predators. This means that the population of red-feathered birds should increase in future generations. This illustrates the process of _____.

A.

genetic selection

B.

natural adaptation

C.

natural selection

D.

genetic survival

APA LO: 1.3

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Natural selection

Chapter 02 - Biological Beginnings

2.

_____ introduced the theory of evolution by natural selection in 1859.

A.

Sigmund Freud

B.

Charles Darwin

C.

Stephen Hawking

D.

Wilhelm Wundt

APA LO: 1.1

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Natural selection

Chapter 02 - Biological Beginnings

3.

If a baboon learns to eat many different kinds of fruit instead of relying on only one kind for its nutritive needs, we would argue that this behavior promotes its survival. Thus, the behavior is _____.

A.

adaptive

B.

aggressive

C.

dominant

D.

submissive

APA LO: 1.3

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Adaptive behavior

Chapter 02 - Biological Beginnings

4.

Evolution takes place:

A.

over the course of many generations.

B.

almost immediately.

C.

when a species is ready for it.

D.

due to active attempts at change on the part of a species.

APA LO: 1.1

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Adaptive behavior

Chapter 02 - Biological Beginnings

5.

Psychology's newest approach, _____, emphasizes the importance of adaptation, reproduction, and "survival of the fittest" in shaping behavior.

A.

behavioral psychology

B.

humanistic psychology

C.

cognitive psychology

D.

evolutionary psychology

APA LO: 1.1

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary psychology

Chapter 02 - Biological Beginnings

6.

According to evolutionary developmental psychologists, many evolved psychological mechanisms are _____. That is, the mechanisms apply only to a specific aspect of a person's makeup.

A.

domain-specific

B.

maladjusted

C.

non-operational

D.

unconditional

APA LO: 1.1

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary developmental psychology

Chapter 02 - Biological Beginnings

7.

Which of the following statements is true about evolutionary developmental psychology?

A.

Many evolved psychological mechanisms apply only to a specific aspect of a person's makeup.

B.

The mind is a general-purpose device that can be applied equally to a vast array of problems.

C.

All behaviors that were adaptive for our prehistoric ancestors serve us well today.

D.

Evolution has not impacted human development.

APA LO: 1.2

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary developmental psychology

Chapter 02 - Biological Beginnings

8.

The food-scarce environment of our ancestors likely led to humans' propensity to gorge when food is available and to crave high-caloric foods—a trait that might lead to an epidemic of obesity when food is plentiful. This illustrates how:

A.

socialization influences the development of behavior and cognitive skills in human beings.

B.

evolved mechanisms are not always adaptive in contemporary society.

C.

organisms pass on characteristics they had acquired during their lifetime to their offspring.

D.

the benefits of evolutionary selection decrease with age.

APA LO: 1.2

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty Level: Hard

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary developmental psychology

Chapter 02 - Biological Beginnings

9.

According to Paul Baltes, the benefits conferred with evolutionary selection _____ with age.

A.

increase

B.

stay the same

C.

decrease

D.

fluctuate

APA LO: 1.1

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolution and life-span development

Chapter 02 - Biological Beginnings

10.

According to life-span developmentalist Paul Baltes, the benefits conferred by evolutionary selection decrease with age. Natural selection has not weeded out many harmful conditions and nonadaptive characteristics that appear among older adults. Why?

A.

Degeneration aids in the transmission of desirable traits to future generations.

B.

Natural selection operates primarily on characteristics that are tied to reproductive fitness.

C.

Human evolution has no effect on previous generations.

D.

Evolved mechanisms are always adaptive in contemporary society.

APA LO: 1.2

Accessibility: Keyboard Navigation

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolution and life-span development

Chapter 02 - Biological Beginnings

11.

Paul Baltes says that natural selection among humans operates mainly during the _____ of life.

A.

second half

B.

last years

C.

first half

D.

first year

APA LO: 1.1

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Mitosis

Chapter 02 - Biological Beginnings

25.

Which of the following is true of mitosis?

A.

Mitosis is the cellular reproduction that occurs to form the sperm and the egg cells.

B.

Mitosis results in the formation of four new cells.

C.

Mitosis results in the formation of new cells with 23 pairs of chromosomes.

D.

Mitosis results in the formation of three new cells.

APA LO: 1.2

Chapter 02 - Biological Beginnings

39.

Ethel is 50 years old but appears much more aged. Most of Ethel's relatives have not lived past the age of 60. Which of the following genes are responsible for the accelerated aging that is observed in Ethel and her family members?

A.

Susceptibility genes

B.

Longevity genes

C.

Vulnerability genes

D.

Mutated genes

APA LO: 1.3

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Sources of variability

Chapter 02 - Biological Beginnings

40.

_____ genes are those that make an individual less vulnerable to certain diseases and make it more likely for him/her to live till an older age.

A.

Susceptibility

B.

Longevity

C.

Vulnerability

D.

Mutated

APA LO: 1.1

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Sources of variability

Chapter 02 - Biological Beginnings

42.

Emma and Anna are identical twins who were adopted by different families a few weeks after birth. Although genetically identical, they grew up with different physical and psychological characteristics. For example, though both inherited a tendency to grow large, Anna was slim and athletic due to the active lifestyle practiced in her adoptive family. This variability can be explained by how:

A.

each zygote is unique.

B.

longevity genes can make an individual less vulnerable to certain diseases.

C.

for each genotype, a range of phenotypes can be expressed.

D.

mutated genes can be a source of genetic variability.

Topic: Sources of variability

Chapter 02 - Biological Beginnings

49.

In some cases, one gene of a pair always exerts its effects overriding the potential influence of the other gene. This is the _____ principle.

A.

sex-linked genes

B.

dominant-recessive genes

C.

genetic imprinting

D.

polygenic inheritance

APA LO: 1.1

Accessibility: Keyboard Navigation

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Dominant-recessive genes

50. Clark's genotype contains a dominant gene for brown eye color and recessive gene for blue eye color. According to the dominant-recessive gene principle, which of the following phenotypes is most likely to be observed in Clark?

A.

black eyes

B.

blue eyes

C.

grey eyes

D.

brown eyes

APA LO: 1.3

Topic: Dominant-recessive genes

Chapter 02 - Biological Beginnings

51. Mary's mother has blonde hair and her father has brown hair. Mary has a gene for brown hair and a gene for blonde hair. She has brown hair. This indicates that the gene for brown hair is a(n) _____.

A.

dominant gene

B.

recessive gene

C.

susceptible gene

D.

longevity gene

APA LO: 1.3

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Dominant-recessive genes

Chapter 02 - Biological Beginnings

52. Carrie's parents have brown hair. However, Carrie gets genes for blond hair from both of her parents, and as a result she has blonde hair. This indicates that the gene for blonde hair is

a:

A.

recessive gene.

B.

dominant gene.

C.

susceptibility gene.

D.

longevity gene.

APA LO: 1.3

Accessibility: Keyboard Navigation

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Dominant-recessive genes

Chapter 02 - Biological Beginnings

53.

A(n) _____ gene overrides the potential influence of a recessive gene.

A.

longevity

B.

dominant

C.

susceptible

D.

aggressive

APA LO: 1.1

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Evocative genotype-environment correlations

Chapter 02 - Biological Beginnings

116.

Timothy is a quiet 6-year-old who is usually withdrawn in class. As a result, he does not receive much attention from his peers and mostly plays by himself. According to Sandra Scarr, this is an example of a(n) _____.

A.

passive genotype-environment correlation

B.

active (niche-picking) genotype-environment correlation

C.

gene x environment interaction

D.

evocative genotype-environment correlation

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Active genotype-environment correlations

Chapter 02 - Biological Beginnings

118.

According to Sandra Scarr, passive genotype-environment correlations are relatively more common in the lives of:

A.

infants and young children.

B.

older children.

C.

adolescents.

D.

adults.

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Evocative genotype-environment correlations

Chapter 02 - Biological Beginnings

119.

Which of the following is an example of a passive genotype-environment correlation?

A.

Uncooperative, distractible children receive more unpleasant and disciplinary action from parents and teachers.

B.

Outgoing children tend to seek out social contexts in which to interact with people.

C.

Parents who have a genetic predisposition to be musically inclined encourage their children to learn how to play a music instrument.

D.

Infants who smile more receive more attention from the individuals in their social environment.

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Nonshared environmental influences

Chapter 02 - Biological Beginnings

122.

Behavior geneticist Robert Plomin has found that shared environment:

A.

is independent of heredity influences.

B.

accounts for most of the variation in children's personality or interests.

C.

is responsible for higher incidence of rivalry and aggression between siblings.

D.

accounts for little of the variation in children's personality or interests.

APA LO: 1.2

Chapter 02 - Biological Beginnings

123.

Leila and Alexander are siblings. Every Saturday morning, Leila and her grandmother cook breakfast together and then do some errands and shopping together. During that time, Alexander and his grandfather spend some quality "male bonding" time. They like to play miniature golf or do yard work. The interactions that each child has with the grandparent would be known as what type of environmental experience?

A.

Shared environmental experiences

B.

Evocative genotype-environment correlations

C.

Nonshared environmental experiences

D.

Shared experiences with peers

APA LO: 1.3

Short Answer Questions

Chapter 02 - Biological Beginnings

126.

Name the theorist who published *On the Origin of Species*, in 1859, that outlined his/her theory of natural selection.

Charles Darwin

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Natural selection

127.

What is the behavior that promotes an organism's survival in the natural habitat?

Adaptive behavior

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Adaptive behavior

Chapter 02 - Biological Beginnings

128.

What is the psychological perspective that emphasizes the importance of adaptation, reproduction, and "survival of the fittest" in shaping human behavior?

Evolutionary psychology

APA LO: 1.1

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.1: Discuss the evolutionary perspective on life-span development.

Topic: Evolutionary psychology

129.

What is a complex molecule, with a double helix shape, that contains genetic information?

DNA (deoxyribonucleic acid)

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Genes

Chapter 02 - Biological Beginnings

130.

What are the short segments of DNA that are located on the chromosomes, and which are considered to be the basic units of hereditary information?

Genes

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Genes

131.

Cell division in the eggs and sperms. A cell duplicates its chromosomes and divides twice. This leads to the formation of four cells that contain only half of the genetic material of the parent cell. What is this process called?

Meiosis

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Meiosis

Chapter 02 - Biological Beginnings

132.

Palomar is pregnant. During the early stages of her pregnancy, the single zygote splits into two genetically identical replicas. Her doctor tells her she is going to have _____ twins.

identical (monozygotic)

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Sources of variability

133.

Xiomarra is tall with dark curly hair and brown eyes. She is outgoing and friendly. Name these observable characteristics of her genetic makeup.

Phenotype

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Sources of variability

Chapter 02 - Biological Beginnings

134.

A chromosomal abnormality is characterized by an extra copy of chromosome 21. A person with this disorder typically has a round face, a flattened skull, an extra fold of skin over the eyelids, a protruding tongue, short limbs, and retardation of motor and mental abilities. What is this disorder called?

Down syndrome

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Down syndrome

135.

Violet is undergoing a prenatal test where the Doctor takes a small sample of the placenta and then analyzes it to detect genetic defects and chromosomal abnormalities. Name the procedure she is undergoing.

Chorionic villus sampling (CVS)

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.3: Identify some important reproductive challenges and choices.

Topic: Chorionic villus sampling

Chapter 02 - Biological Beginnings

136.

Name a prenatal medical procedure in which a sample of amniotic fluid is withdrawn by a syringe and tested for chromosomal or metabolic disorders.

Amniocentesis

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.3: Identify some important reproductive challenges and choices.

Topic: Amniocentesis

137.

Yelena is an outgoing person; therefore, people naturally tend to like her and find her personable. According to Scarr-McCartney, which genotype-environment interaction does this best represent?

Evocative genotype-environment correlation

APA LO: 1.2

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Evocative genotype-environment correlations

Chapter 02 - Biological Beginnings

138.

Deshawn believes that development is the result of an ongoing, bidirectional interchange between heredity and the environment. He has most likely adopted which theoretical perspective?

Epigenetic view

APA LO: 1.2

Bloom's: Understand

Difficulty Level: Medium

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Epigenetic view

139.

List the four genetic principles. In your opinion, which do you think is the most serious and why?

Students' answers may vary.

The four genetic principles are: dominant-recessive genes principle, sex-linked genes (X-linked inheritance), genetic imprinting, and polygenic inheritance.

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Medium

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Dominant-recessive genes

Topic: Genetic imprinting

Topic: Polygenic imprinting

Topic: Sex-linked genes

Chapter 02 - Biological Beginnings

140.

List four sex-linked chromosomal abnormalities.

Klinefelter syndrome, fragile X syndrome, Turner syndrome, and XYY syndrome are all sex-linked chromosomal abnormalities.

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Sex-linked genes

141.

List five gene-linked abnormalities.

Cystic fibrosis, diabetes, hemophilia, Huntington's disease, sickle-cell anemia, spina bifida, Tay-Sachs disease, and phenylketonuria (PKU).

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.2: Describe the mechanisms of heredity in normal and abnormal human development.

Topic: Gene-linked abnormalities

Chapter 02 - Biological Beginnings

142.

Name and describe three prenatal diagnostic tests.

Prenatal diagnostic tests include:

- 1) Ultrasound sonography where high-frequency sound waves are directed into the pregnant woman's abdomen and the echo from the sounds is transformed into a visual representation of the fetus's inner structures.
- 2) Fetal magnetic resonance imaging (MRI) where a powerful magnet and radio images are used to generate detailed images of the body's organs and structures.
- 3) Chorionic villus sampling (CVS) where a small sample of the placenta is removed to test for genetic defects and chromosomal abnormalities.

APA LO: 1.1

Bloom's: Remember

Difficulty Level: Easy

Learning Objective: 2.3: Identify some important reproductive challenges and choices.

Topic: Chorionic villus sampling

Topic: Ultrasound sonography

143.

List three possible causes of infertility in women and in men. What are the two strategies that can be used to overcome infertility?

Lack of ovulation, producing abnormal ova, blocked fallopian tubes, and disease preventing implantation of the ova in the uterus, are some of the causes of infertility in women. Sperm lacking motility, low sperm count, and blocked passageways could be causes of infertility in men.

APA LO: 1.2

Bloom's: Understand

Difficulty Level: Hard

Learning Objective: 2.3: Identify some important reproductive challenges and choices.

Topic: Infertility and reproductive technology

Chapter 02 - Biological Beginnings

144.

Identify and describe the two common studies used by behavior geneticists to investigate the influence of heredity on behavior.

To study the influence of heredity on behavior, behavior geneticists often use either twins or adoption situations. In the most common twin study, the behavioral similarity of identical twins (who are genetically identical) is compared with the behavioral similarity of fraternal twins. In an adoption study, investigators seek to discover whether the behavior and psychological characteristics of adopted children are more like those of their adoptive parents, who have provided a home environment, or more like those of their biological parents, who have contributed their heredity. Another form of adoption study compares adoptive and biological siblings.

APA LO: 1.2

Bloom's: Understand

Difficulty Level: Hard

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Behavior genetics

145.

What are the three ways that heredity and environment are correlated as described by behavior geneticist Sandra Scarr.

Behavior geneticist Sandra Scarr described three ways that heredity and environment are correlated:

- 1) Passive genotype-environment correlations that occur because biological parents, who are genetically related to the child, provide a rearing environment for the child.
- 2) Evocative genotype-environment correlations that occur because a child's characteristics elicit certain types of environments.
- 3) Active (niche-picking) genotype-environment correlations that occur when children seek out environments that they find compatible and stimulating.

APA LO: 1.3

Bloom's: Remember

Difficulty Level: Medium

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Active genotype-environment correlations

Topic: Evocative genotype-environment correlations

Topic: Passive genotype-environment correlations

Chapter 02 - Biological Beginnings

146.

Assume that in the case study of the Jim and Jim twins, it was found that their similar development trajectories were a result of similar temperament and interests which caused them to seek out similar environments, which were compatible and stimulating to them. Which heredity-environment correlation is reflected in this scenario?

This would reflect the active (niche-picking) genotype-environment correlation that occurs when children seek out environments that they find compatible and stimulating.

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Active genotype-environment correlations

147.

Define shared and nonshared environmental experience. Provide an example of each and point out how that example exemplifies the concept?

Shared environmental experiences are siblings' common experiences, such as their parents' personalities or intellectual orientation, the family's socioeconomic status, and the neighborhood in which they live. Nonshared environmental experiences are a child's unique experiences, both within the family and outside the family, that are not shared with a sibling. Different peer groups, different teachers, and different friends are examples.

APA LO: 1.2

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Nonshared environmental influences

Topic: Shared environmental influences

Chapter 02 - Biological Beginnings

148.

Define Gene \times environment (G \times E) interaction. Give an example of a study (either your own or one from the book) that could illustrate the interaction between genes and the environment.

Gene \times environment (G \times E) interaction refers to the interaction of a specific measured variation in the DNA and a specific measured aspect of the environment. In a study, adults who experienced parental loss as young children were more likely to have unresolved attachment issues as adults only when they had the short version of the 5-HTTLPR gene. The long version of the serotonin transporter gene apparently provided some protection and ability to cope better with parental loss.

APA LO: 1.3

Bloom's: Apply

Difficulty Level: Hard

Learning Objective: 2.4: Explain how heredity and environment interact in human development.

Topic: Gene X environment interaction
