Essay Questions

1. According to Marx's theory of society, what social classes are in constant competition? What characterizes each of these social classes and overall class conflict in society? Finally, how can you apply this theory to contemporary social life?

Answer: Karl Marx identifies the two classes of society under capitalism as the bourgeoisie and the proletariat. The basis of the conflict between these two classes is the bourgeoisie's greater access to special resources that Marx refers to as capital. Capital allows the bourgeoisie to make investments, own property, and hire workers. The proletariat, or working class, must seek employment and sell their labour to make ends meet. This social arrangement has a polarizing effect on these two groups, resulting in inequality. The owners and executives of large corporations that control the production and distributions of goods, services, and cultural ideas are modern-day examples of the bourgeoisie; everyone else in society would be equivalent to the proletariat.

2. Emile Durkheim's definition of religion is centred on those parts of society that are considered sacred. How does Durkheim explain the sacred in society? In your answer describe at least three examples of sacred elements in contemporary society.

Answer: Durkheim believed that particular parts of society were treated with exceptional deference and held in higher regard by members of society than everyday objects. In Durkheim's estimation, objects, places, beliefs and behaviours can all be considered sacred to particular groups. For example, a place such as the baseball stadium in Boston called Fenway Park might be considered sacred by a dedicated Red Sox fan, the American flag is also considered to be a sacred object with no real direct connection to religion, and finally, the ritual of marriage can be enacted in a church or at the town hall, but it is still seen as a sacred ritual despite its location. Examples will vary.

3. Georg Simmel discusses social circles and social distance to demonstrate how individuals are connected to the rest of society. Explain what a social circle is using two that you are a member of. Include in your explanation how the idea of social distance applies to your two example social circles.

Answer: A social circle describes the network of connections an individual develops through the people they regularly interact with. Two examples of social circles are the family and Facebook friends. Social distance describes how strong or weak our connections to others are in our social circles. In the case of the family connections should be strong, resulting in close social distance. Facebook friends would likely have weaker connections and as a result have greater social distance. Simmel uses these ideas to explain the power of social relationships over the individual.

4. The "dramaturgical" approach to social life outlined by Erving Goffman uses the stage as a metaphor for understanding how individuals behave in society. He argues that social actors use "impression management" to present themselves to others in all social situations. Explain "impression management" and present an example of how you have used this in your own life.

Answer: Impression management describes how we manipulate the ways we present ourselves to others to create the best possible impression as we understand it. In other words, we consider the social situation we are in and we act accordingly to satisfy how we want to be seen by others as well as how we can achieve particular goals. For example, a person who dresses up for a job interview and presents her most professional behaviour is engaging in impression management. Also, a person going on a first date is likely to carefully present who he is based on whether or not he wishes to have a second date.

5. One perspective from feminist theory points to the interlocking nature of inequality. This perspective is referred to as intersectionality. Using yourself as an example, apply the concept of intersectionality to three aspects of your identity.

Answer: Intersectionality, by focusing on the connections between disadvantaged groups, looks at the way inequalities are experienced together. For example, if I were to consider my gender, as a woman of colour from the workingclass, my experience with gender inequality will be significantly different from a white woman in the middleclass, or even a black woman in poverty. To truly understand the nuances of inequality we must look at how all these elements contribute to the inequality an individual or group experiences.
