

Chapter 2: Research Methods

Total Assessment Guide

Topic		Factual	Conceptual	Applied
Quick Quiz 1	Multiple Choice	1, 3, 5, 7, 9	6, 10	2, 4, 8
Quick Quiz 2	Multiple Choice	1, 3, 5–6, 9	7, 10	2, 4, 8
Introduction and Learning Objective 2.1a Identify two modes of thinking and their application to scientific reasoning.	Multiple Choice	6–9, 11	1–5	10
	Fill-in-the-Blank	1–2		
	Essay			
	Critical Thinking			
Learning Objective 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.	Multiple Choice	12, 14–16, 22, 26–27, 31, 33, 36, 42	23, 25, 28–29, 43, 46–47, 49	13, 17–21, 24, 30, 32, 34–35, 37–41, 44–45, 48, 50–52
	Fill-in-the-Blank		4, 6	3, 5
	Essay			
	Critical Thinking			
Learning Objective 2.2b Describe the role of correlational designs and distinguish correlation from causation.	Multiple Choice	54, 56, 62, 65–66, 70, 75–76	77, 79	53, 55, 57–61, 63–64, 67–69, 71–74
	Fill-in-the-Blank	7, 9	8, 10	
	Essay	1		2
	Critical Thinking			
Learning Objective 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control for these pitfalls.	Multiple Choice	78, 80–81, 83, 88–90, 97–98, 100, 103, 107, 109–110, 112	79, 96, 101–102, 106, 113–114	82, 84–87, 91–95, 99, 104–105, 108, 111, 115–116
	Fill-in-the-Blank	11–13, 17	14, 16	15
	Essay	1		
	Critical Thinking			
Learning Objective 2.3a Explain the ethical obligations of researchers toward their research participants.	Multiple Choice	117, 119, 122	120	118, 121, 123–125
	Fill-in-the-Blank	18		
	Essay	3		
	Critical Thinking			
Learning Objective 2.3b Describe both sides of the debate on the use of animals as research subjects.	Multiple Choice	126	128	127
	Fill-in-the-Blank			
	Essay			
	Critical Thinking			
Learning Objective 2.4a Identify uses of various measures of central tendency and variability.	Multiple Choice	129–132, 140–143	133, 137, 139	134–136, 138, 144
	Fill-in-the-Blank	22	21	19–20
	Essay		4	
	Critical Thinking		1	
Learning Objective 2.4b Explain how inferential statistics can help us to determine whether we can generalize from our sample to the full population.	Multiple Choice	146–147	148	145, 149–150
	Fill-in-the-Blank			
	Essay			
	Critical Thinking			

Topic		Factual	Conceptual	Applied
Learning Objective 2.4c Show how statistics can be misused for purposes of persuasion.	Multiple Choice			
	Fill-in-the-Blank			
	Essay			
	Critical Thinking			
Learning Objective 2.5a Identify flaws in research designs and how to correct.	Multiple Choice	151–152		23
	Fill-in-the-Blank			
	Essay			
	Critical Thinking			
Learning Objective 2.5b Identify skills for evaluating psychological claims in the popular media.	Multiple Choice		154, 156–157	153–155
	Fill-in-the-Blank		25	24
	Essay		5	
	Critical Thinking			

Name _____

Chapter 2 Quick Quiz 1

1. When a researcher tests his or her hypothesis, he or she is often hoping to gather information that is consistent with a particular theory. What, more specifically, allows a researcher to say that he or she has “proven” a theory?
 - A) Any time a hypothesis is confirmed, a theory is automatically “proven.”
 - B) Any time a hypothesis confirms one theory and simultaneously disconfirms at least one other theory, a theory has been “proven.”
 - C) Any time a hypothesis confirms one theory and simultaneously disconfirms all other known theories, a theory has been “proven.”
 - D) A researcher is never able to say that he or she has “proven” a theory.
2. Dr. Potter, an English professor, is curious about his students’ attitudes toward one of his favorite books. What research method is he most likely to use to gather this information?
 - A) survey
 - B) case study
 - C) experiment
 - D) naturalistic observation
3. A graph that can be used to represent the pattern of relationship between scores from two variables is called a _____.
 - A) bar graph
 - B) frequency polygon
 - C) histogram
 - D) scatterplot
4. Ryan, a professional bass fisherman, is trying to determine which lure is most effective on Wakeby Lake—the plastic worm he normally uses, or the new minnow-style lure he bought yesterday. Based on this scenario, what would constitute the control?
 - A) the new minnow lure
 - B) the plastic worm
 - C) neither the minnow lure nor the plastic worm
 - D) there is no control.
5. The _____ variable is what the researcher “manipulates,” or varies, in an experimental study.
 - A) control
 - B) dependent
 - C) operational
 - D) independent
6. Students of psychology are often frustrated because there are very few, if any, clear-cut answers to many of their questions. What is the primary limiting factor in obtaining firsthand knowledge of questions such as the long-term effects of child abuse or the effects of smoking marijuana on a pregnancy?
 - A) Most people in the general public are not concerned with these issues.
 - B) It is difficult to find people who are victims of abuse or mothers who smoke marijuana during pregnancy.
 - C) Ethical guidelines in research prevent psychologists from carrying out many of these studies.
 - D) Institutional review boards encourage participation in studies that may be harmful to participants either mentally or physically.
7. Which of the following is one of the two types of statistics that researchers use to analyze the data that they collect?
 - A) predictive statistics
 - B) constrictive statistics
 - C) descriptive statistics
 - D) computational statistics

8. A therapist wishes to show that his new therapy is a marked improvement over the current best available therapy. To do so, he examines the number of participants who improved with each. A total of 125 participants received his treatment (and 100 of them improved). A total of 80 participants received the alternative treatment (and 64 of them improved). What should the therapist conclude?

- A) His treatment is superior to the alternative because 100 is greater than 64.
- B) His treatment is no better than the alternative because the percentages are the same.
- C) His treatment is inferior because the percentages are the same.
- D) His treatment is superior because it included 125 people as opposed to 80.

9. A mechanism by which experts in a field carefully screen the work of their colleagues is known as _____.

- A) experimental validity
- B) experimenter bias effect
- C) peer review
- D) peer assessment

10. A major limitation in reading about the results of psychological research in the newspaper is that _____.

- A) reporters provide too much detailed information about the research study that the general public cannot comprehend in their articles
- B) reporters are so well trained to discuss research that they cannot easily communicate about it with the average lay person
- C) reporters create controversy where none exists by treating scientific evidence and dissenter's biased opinions as equally compelling
- D) reporters do not know how to identify experts to interview for many of their stories, and end up unintentionally misleading the public

Chapter 2 Quick Quiz 1 Answer Key

1. D Explanation: Because we can never be 100 percent certain that the theory we have forwarded is correct, the use of the term “prove” is generally incorrect. (Scientific Methodology: A Toolbox of Skills, Factual, APA LO 2.1, TEXT LO 2.2a)
2. A Explanation: The survey method is most appropriate when we are interested in people’s attitudes or opinions. (Scientific Methodology: A Toolbox of Skills, Applied, APA LO 1.3, TEXT LO 2.2a)
3. D Explanation: Scatterplots give an overall image of the correlation between variables. (Topic: Scientific Methodology: A Toolbox of Skills, Factual, APA LO 1.1, TEXT LO 2.2b)
4. B Explanation: A control receives no manipulation in an experiment. In this case, normal use of the plastic worm suggests lack of manipulation. (Scientific Methodology: A Toolbox of Skills, Applied, APA LO 1.3, TEXT LO 2.2c)
5. D Explanation: The independent variable is sometimes referred to as the manipulated variable. (Scientific Methodology: A Toolbox of Skills, Factual, APA LO 1.1, TEXT LO 2.2c)
6. C Explanation: Due to ethical considerations, we cannot randomly assign children to abusive or nonabusive homes, for example. Thus, it is impossible to say whether A causes B, in many cases. (Ethical Issues in Research Design, Conceptual, APA LO 3.1, TEXT LO 2.3a)
7. C Explanation: Descriptive and inferential statistics are the two basic types that are used in psychology. (Statistics: The Language of Psychological Research, Factual, APA LO 1.1, TEXT LO 2.4a)
8. B Explanation: He has found the same probability in both cases, so there is no statistical difference between the two participant groups. (Statistics: The Language of Psychological Research, Applied, APA LO 1.3, TEXT LO 2.4b)
9. C Explanation: Peer review is one of the most important safeguards against the dissemination of inappropriate or invalid research. (Evaluating Psychological Research, Factual, APA LO 1.1, TEXT LO 2.5a)
10. C Explanation: This is an important point to make, because those without basis for opinions are often given the same weight as those who do have scientific basis for opinions. (Evaluating Psychological Research, Conceptual, APA LO 1.3, TEXT LO 2.5b)

Name _____

Chapter 2 Quick Quiz 2

1. Which Nobel Prize–winning psychologist proposed the idea that there are two different types of thinking systems, one that works intuitively and another that works analytically?
A) Kahneman
B) Piaget
C) Newman
D) Zarski
2. Sarah, a graduate student in psychology, just heard about a five-year-old child who has already learned calculus. She is thinking about doing an in-depth study of the child for her dissertation because such early-life math skill is so rare. Sarah is considering which research method?
A) naturalistic observation
B) experiment
C) independent study
D) case study
3. The perception of a statistical association between two variables where none exists is known as _____.
A) confirmation bias
B) illusory correlation
C) existence proof
D) Type I error
4. Dr. Johansen randomly assigned research participants to three different groups during her last experiment. She then proceeded to give all the participants in the experiment a new study technique designed to enhance their learning for the upcoming test. What critical error did she make during her experiment?
A) She failed to identify the independent variable.
B) She failed to identify the dependent variable.
C) She failed to include an experimental group.
D) She failed to include a control group.
5. The variable that an experimenter assesses or measures to determine whether or not the manipulation has had an effect is the _____ variable.
A) causal
B) confounding
C) dependent
D) independent
6. What is the purpose of an institutional review board?
A) to help protect research participants from abuse
B) to hinder the research process by placing unnecessary hurdles in the way of researchers
C) to help protect the university from lawsuits from unhappy research participants
D) to encourage the use of deception in medical and psychological research with humans
7. In which situation would presenting the mean as one's measure of central tendency be least accurate?
A) when the distribution is normally distributed
B) when the distribution is negatively skewed
C) when the distribution is bimodal
D) when there are many scores in the data set
8. After carefully observing thousands of students, Dr. O'Brien revealed to his colleagues that students with brown eyes are statistically more likely to write with pens instead of pencils. Although his colleagues did not question his statistics, they did suggest that a finding such as this lacked _____.
A) authenticity
B) standardization
C) statistical measures
D) practical significance

9. The peer review process is designed to _____.
- A) block alternative therapies from being made available to the general public
 - B) identify flaws in a research study's methods, findings, and conclusions
 - C) make researchers feel bad when their article is not published
 - D) place obstacles in front of people whose theories differ from mainstream science
10. A key factor to consider when reading about the results of a study on the Internet, in a newspaper, or in a news magazine is to _____.
- A) consider the source of the information
 - B) determine how well it fits with what others have told you in the past.
 - C) rely on your common sense or "gut" intuition.
 - D) popular media outlets always have inaccurate information.

Chapter 2 Quick Quiz 2 Answer Key

1. A Explanation: Daniel Kahneman was the psychologist who proposed this idea. (The Beauty and Necessity of Good Research Design, Factual, APA LO 1.1, TEXT LO 2.1a)
2. D Explanation: Case studies involve in-depth analyses of one or a few participants. (Scientific Methodology: A Toolbox of Skills, Applied, APA LO 1.3, TEXT LO 2.2a)
3. B Explanation: We often fall victim to this illusion, even when no relationship has been shown to truly exist. (Scientific Methodology: A Toolbox of Skills, Factual, APA LO 1.1, TEXT LO 2.2b)
4. D Explanation: In an experiment, we need to ensure that there is a group that receives the “active” treatment and a group that receives a “placebo” treatment (in this case, a study technique that has already been tested). (Scientific Methodology: A Toolbox of Skills, Applied, APA LO 1.3, TEXT LO 2.2c)
5. C Explanation: This variable is sometimes called the outcome variable, or the measured variable. (Scientific Methodology: A Toolbox of Skills, Factual, APA LO 1.1, TEXT LO 2.2c)
6. A Explanation: IRBs represent a very important line of defense against intentional or unintentional abuse or harming of research participants. (Ethical Issues in Research Design, Factual, APA LO 3.1, TEXT LO 2.3a)
7. B Explanation: The mean is adversely affected by positively or negatively skewed data sets. (Statistics: The Language of Psychological Research, Conceptual, APA LO 1.3, TEXT LO 2.4a)
8. D Explanation: Practical significance refers to whether a statistical difference “makes a difference” in the real world. (Statistics: The Language of Psychological Research, Applied, APA LO 1.3, TEXT LO 2.4b)
9. B Explanation: It is important to have one’s peers put “objective eyes” on research to make sure that it is as free from errors and biases as possible. (Evaluating Psychological Research, Factual, APA LO 1.1, TEXT LO 2.5a)
10. A Explanation: Correct. One must always consider the source from which information is drawn. (Evaluating Psychological Research, Conceptual, APA LO 1.3, TEXT LO 2.5b)

Chapter 2: Research Methods

Test Bank

Multiple Choice

1. Your textbook discusses the issue of facilitated communication and its applicability to assisting children with autism spectrum disorder. One possibility for the early research results was that the children were communicating through the adults who were assisting them. As the text notes, another explanation for the miraculous findings was that the “facilitators” were simply guiding the hands of the children to communicate things that their parents would want to hear. This alternate explanation is consistent with the concept of _____.

A) replicability

Incorrect. Though replication of early findings was a problem for the issue of facilitated communication, it is not the answer to this particular question.

B) ruling out rival hypotheses

Correct. Before we accept a given explanation as accurate, we have to ask whether there are other feasible explanations that can better account for a given phenomenon.

C) falsifiability

D) correlation vs. causation

Answer: B

Diff: 2

Skill: Conceptual

APA LO: 2.1

TEXT LO: Introduction

Topic: Introduction

2. What is one take home message from the discussion of autism and facilitated communication?

A) Children with autism spectrum disorder want to communicate with their parents but need someone to facilitate the process.

B) In almost all cases researched, the data failed to support the idea that facilitated communication was truly effective.

Correct. Your authors note that in nearly 100% of cases tested, the picture flashed to the facilitator was the word typed.

C) Psychological research is dangerous because it allows anyone to find support for any idea or opinion.

Incorrect. While this may be true in some cases, this is not the prevailing message that the authors are trying to convey.

D) The scientific method is not an effective means for finding solutions for persons who live with autism and other psychological disorders.

Answer: B

Diff: 3

Skill: Conceptual

APA LO: 1.3

TEXT LO: Introduction

Topic: Introduction

3. Contradicting years of theory and practice, Douglas Biklen claimed that children with autism spectrum disorder could, in fact, communicate with the aid of a “facilitator.” With his help, these children gave messages of love and warmth to their parents, many of whom had been without such affection since their children were born. When the evidence of this “facilitated communication” is examined, which principle of critical thinking from your chapter is not supported?

- A) Occam’s Razor
- B) correlation vs. causation
- C) falsifiability

Incorrect. In this case, the claims were falsifiable as demonstrated by ongoing research.

D) extraordinary claims

Correct. The extraordinary claims that children with autism spectrum disorder could suddenly be given an avenue to communicate effectively was belied by the research evidence, which showed facilitated communication to be without validity of any kind.

Answer: D

Diff: 2

Skill: Conceptual

APA LO: 2.1

TEXT LO: Introduction

Topic: Introduction

4. The discussion on the topic of facilitated communication demonstrated the importance of which critical component of critical thinking?

- A) developing falsifiable hypotheses

Incorrect. In this case, the claims were falsifiable as demonstrated by ongoing research.

B) parsimonious theories

C) replication of earlier research findings

D) ruling out rival hypotheses

Correct. As it turned out, research demonstrated that facilitated communication had no true research validity, and an alternate explanation was needed. That explanation was that the “facilitators” were actually the ones doing the communicating, not the children with autism spectrum disorder.

Answer: D

Diff: 2

Skill: Conceptual

APA LO: 2.1

TEXT LO: Introduction

Topic: Introduction

5. The use of the prefrontal lobotomy was, for quite some time, regarded as a miracle treatment for people suffering from schizophrenia and other mental illnesses. The amazing nature of this treatment was not, however, supported by research into its effectiveness. Which concept of critical thinking is important to consider in this example?

- A) correlation vs. causation
- B) replicability

Incorrect. Because there was no scientific research that supported the claims of the effectiveness of the lobotomy, there would be nothing to be replicated. Therefore this answer is not the best choice.

- C) Occam's Razor
- D) extraordinary claims

Correct. Remember that extraordinary claims, including "miracle cures," must be supported by extraordinary evidence. That evidence was sorely lacking in the case of the prefrontal lobotomy.

Answer: D

Diff: 2

Skill: Conceptual

APA LO: 1.3

TEXT LO: 2.1a Identify two modes of thinking and their application to scientific reasoning.

Topic: The Beauty and Necessity of Good Research Design

6. Once controlled research studies were conducted on the effectiveness of prefrontal lobotomies, they were discovered to be _____.

- A) slightly effective
- B) sometimes effective, sometimes not
- C) universally effective
- D) essentially useless

Answer: D

Diff: 1

Skill: Factual

APA LO: 2.2

TEXT LO: 2.1a Identify two modes of thinking and their application to scientific reasoning.

Topic: The Beauty and Necessity of Good Research Design

7. When a psychologist is discussing a *heuristic*, he or she is referring to _____.

- A) biased information processing strategies
- B) a mental shortcut or rule of thumb
- C) a mental technique to improve memory recall
- D) a mental technique to increase deliberation in our decision making

Answer: B

Diff: 1

Skill: Factual

APA LO: 1.1

TEXT LO: 2.1a Identify two modes of thinking and their application to scientific reasoning.

Topic: The Beauty and Necessity of Good Research Design

8. A mental shortcut that helps us to streamline our thinking and make sense of our world is called a _____.

- A) theory
- B) heuristic
- C) schema
- D) mental reference

Answer: B

Diff: 1

Skill: Factual

APA LO: 1.1

TEXT LO: 2.1a Identify two modes of thinking and their application to scientific reasoning.

Topic: The Beauty and Necessity of Good Research Design

9. Which Nobel Prize–winning psychologist proposed the idea that there are two different types of thinking systems, one that works intuitively and another that works analytically?

- A) Kahneman

Correct. Daniel Kahneman was the psychologist who proposed this idea.

- B) Piaget

Incorrect. Piaget's contributions to cognitive theory do not include these ideas.

- C) Newman

- D) Zarski

Answer: A

Diff: 2

Skill: Factual

APA LO: 1.1

TEXT LO: 2.1a Identify two modes of thinking and their application to scientific reasoning.

Topic: The Beauty and Necessity of Good Research Design

10. When Anya sees an item at the toy store, she buys it without thinking. Her intuition tells her that her daughter will love it as a Christmas gift. This is an example of _____ thinking in Daniel Kahneman's model.

- A) divergent
- B) convergent
- C) System 2

Incorrect. System 2 thinking is analytical and deliberate.

- D) System 1

Correct. System 1 thinking is intuitive and somewhat automatic.

Answer: D

Diff: 3

Skill: Applied

APA LO: 1.3

TEXT LO: 2.1a Identify two modes of thinking and their application to scientific reasoning.

Topic: The Beauty and Necessity of Good Research Design

11. Stopping to take time, consider all of the details, and make a well-reasoned and careful decision are all features that typify Daniel Kahneman's _____ thinking.

A) System 2

Correct. System 2 thinking is analytical and deliberate.

B) functional

C) System 1

Incorrect. System 1 thinking is intuitive and somewhat automatic.

D) introspective

Answer: A

Diff: 3

Skill: Factual

APA LO: 1.1

TEXT LO: 2.1a Identify two modes of thinking and their application to scientific reasoning.

Topic: The Beauty and Necessity of Good Research Design

12. When a researcher tests his or her hypothesis, he or she is often hoping to gather information that is consistent with a particular theory. What, more specifically, allows a researcher to say that he or she has “proven” a theory?

A) Any time a hypothesis is confirmed, a theory is automatically “proven.”

B) Any time a hypothesis confirms one theory and simultaneously disconfirms at least one other theory, a theory has been “proven.”

C) Any time a hypothesis confirms one theory and simultaneously disconfirms all other known theories, a theory has been “proven.”

D) A researcher is never really able to say that he or she has “proven” a theory.

Answer: D

Diff: 3

Skill: Factual

APA LO: 2.1

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

13. Which of the following is one of the questions that a researcher should ask herself before conducting a research study?

A) “How can I avoid using statistics to analyze my results?”

B) “What research methods should I use to test my idea?”

Correct. In fact, this should be one of the first questions asked after the idea has been formulated.

C) “Will I be able to prove my hypothesis?”

Incorrect. Recall from your chapter that a true theory cannot be proven. It simply stands as the best model, based on the available data, until a better model replaces it.

D) “How can I guarantee that I obtain subjective results?”

Answer: B

Diff: 2

Skill: Applied

APA LO: 1.3

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

14. According to your text authors, what do researchers in psychology use to try to avoid making errors and get an accurate view of the world?

A) peer review

Incorrect. Peer review is an important part of the research and publishing process, but this is not the best answer to the question.

B) local and state laws regarding research methodologies

C) statistics

D) a variety of scientific methods

Correct. As your text notes, there is not one single scientific method but rather a "toolbox" of different scientific strategies.

Answer: D

Diff: 2

Skill: Factual

APA LO: 1.3

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

15. Which of the following statements is TRUE about naturalistic observation?

A) It re-creates natural conditions in the laboratory as closely as possible to make an experiment more valid.

B) It involves observing behavior in its real-world context.

C) It is basically the same process as objective introspection.

D) It involves observing behavior in the lab without taking formal notes or using technological equipment to measure the experimental findings.

Answer: B

Diff: 1

Skill: Factual

APA LO: 1.1

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

% correct 75 a = 14 b = 75 c = 0 d = 11 r = .53

% correct 74 a = 21 b = 74 c = 0 d = 5 r = .66

16. Watching behavior in real-world settings while doing your best to avoid influencing those you are watching is known as _____.

A) case study

B) correlation design

C) naturalistic observation

D) existence proof

Answer: C

Diff: 1

Skill: Factual

APA LO: 1.1

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

17. Dr. Watson wanted to know which gender was better at sharing at the sixth-grade level, so he went to the local middle school to observe groups of children during lunch periods. He did this while making sure that the children were not aware that they were being watched, but the school principal gave him permission for this activity. This is a form of _____.

A) case study

B) naturalistic observation

Correct. Naturalistic observation entails watching behavior in a real-world settings.

C) experimental design

Incorrect. Naturalistic observation takes place in the real world. Experimental designs take place in a laboratory setting.

D) confirmation bias

Answer: B

Diff: 2

Skill: Applied

APA LO: 1.3

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

18. A researcher is interested in determining how frequently bullying behavior occurs in real-life settings. This researcher would best be advised to use the _____ design.

A) case study

B) correlational

C) experimental

Incorrect. Naturalistic observation takes place in the real world. Experimental designs take place in a laboratory setting.

D) naturalistic observation

Correct. Naturalistic observation occurs in the real world, rather than in a laboratory.

Answer: D

Diff: 2

Skill: Applied

APA LO: 1.1

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

% correct 84 a = 11 b = 0 c = 5 d = 84 r = .32

19. A group of student researchers divide up the different times and buildings on their campus to attempt to observe when people will hold a door open for another person. These student researchers are most likely to use which research method design when conducting their study?

- A) case study design
- B) correlational design
- C) experimental design

Incorrect. Naturalistic observation takes place in the real world. Experimental designs take place in a laboratory setting.

- D) naturalistic observation design

Correct. Naturalistic observation occurs in the real world, rather than in a laboratory. This is how one can most effectively assess behaviors without influencing them.

Answer: D

Diff: 1

Skill: Applied

APA LO: 1.3

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

% correct 75 a = 6 b = 19 c = 0 d = 75 r = .23

20. Jason was conducting an evaluation of a restaurant waitress. He sat at the table with a list of things to observe in front of him, and the waitress noticed that he was assessing her every move. He noticed that she began acting more professionally around him, was friendlier, and gave him extra attention. Why would Jason have been better off using naturalistic observation for this assessment?

- A) So that he could have more experimental control over his independent variable.

Incorrect. Remember that naturalistic observation is not a form of experimental research, and so one of its drawbacks is a lack of control.

- B) So that he would be sure to “catch” the waitress behaving unprofessionally.

- C) So that he could have been sure to get enough data to use proper statistics.

- D) So that his observations would not have changed the waitress’s behaviors.

Correct. Naturalistic observation involves watching behaviors take place without influencing them.

This way the researcher can get a true and objective “picture” of how those behaviors take place.

Answer: D

Diff: 1

Skill: Applied

APA LO: 1.3

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

21. Professor Williams wants to know if “real” college students exhibit the same kinds of behaviors in class that subjects who were paid to act like college students do. She decides to have someone come in once a week to her classes to record the types of nonverbal behaviors that students engage in while listening to her lectures. This would be an example of which kind of study?

A) a formal experiment

Incorrect. In this study there is no manipulation of one variable to explore its effect on a second variable. This research is naturalistic observation.

B) naturalistic observation

Correct. Naturalistic observation involves watching and recording participants' behavior, often without their knowledge.

C) case study

D) survey research

Answer: B

Diff: 2

Skill: Applied

APA LO: 1.3

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

22. The extent to which it is possible to draw cause-and-effect conclusions from a given research project describes the study's _____ validity.

A) construct

B) cohesive

C) external

D) internal

Answer: D

Diff: 3

Skill: Factual

APA LO: 1.1

TEXT LO: 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Topic: Scientific Methodology: A Toolbox of Skills

23. Because they offer a high level of control over key variables, laboratory experiments tend to have a high level of _____.

A) internal validity

Correct. Internal validity is the extent to which we can draw cause-and-effect inferences from our research data.

B) test-retest reliability

Incorrect. Test-retest reliability refers to the consistency of findings from one administration of an assessment tool to the next.

C) external validity

D) confound reliability

Answer: A

24. Vincent is designing a research study as part of his master's thesis. He wants to do a laboratory study where he can control as many variables as possible, but he is concerned that his findings will not generalize very well from the laboratory setting to the real world. In technical terms, Vincent is concerned about the _____ of his study.

- A) internal validity
- B) test-retest reliability

Incorrect. Test-retest reliability refers to the consistency of findings from one administration of an assessment tool to the next.

- C) external validity

Correct. External validity refers to the extent to which we can generalize findings from a research study to real world settings.

- D) confound reliability

Answer: C

25. A student researcher wishes to maximize the external validity of his or her research design. What research method should you recommend to him or her?

- A) case study design
- B) correlational design
- C) experimental design

Incorrect. The primary benefit of experimental designs is that they are high in internal validity. The generalizability, or external validity, of such research is sometimes quite low.

- D) naturalistic observational design

Correct. Because naturalistic observations often generalize well to the real world, they are high in external validity.

Answer: D

% correct 67 a = 11 b = 5 c = 17 d = 67 r = .68

% correct 63 a = 21 b = 5 c = 11 d = 63 r = .63

34. Sue asked three of her friends after class if they thought the test they just finished taking was as easy as she thought it was. They all agreed that it was. She was surprised to find out the next day that, although she and her friends had indeed done well, a majority of the class had failed.

Why shouldn't Sue have been surprised?

A) Most of the students did not study for the test.

B) She did not use random selection when asking people about the test.

Correct. Without random selection, we can't be sure whether the group we've selected is representative of the larger group.

C) Students should have been randomly assigned to take the tests on different days.

Incorrect. The concept of randomness is important to answer this question, but the correct answer is random selection, not random assignment.

D) Her friends shouldn't have expressed their views regarding the test.

47. One difficulty of survey research is that people may not answer questions with complete honesty, and thus may skew the results of the study. If people give different answers to a survey question that is asked on different occasions, this would be a particular problem for the critical thinking concept of _____.

A) correlation vs. causation

Incorrect. There is nothing in the question that speaks to the nature of relationships (causal or otherwise) between variables.

B) replicability

Correct. If people give different answers to survey questions asked at different times, the outcomes of the research would be inconsistent. This would present a problem for replication, as the research will not give the same picture from study to study.

C) extraordinary claims

D) falsifiability

Answer: B

48. Alex, a freshman in college, wants to know how many of her dormmates have tried marijuana, so she decides to survey everyone on her floor. Despite rumors to the contrary, the results suggest that less than ten percent of her classmates have tried the drug. What is the most likely explanation for her findings?

A) People often distort their answers or fail to tell the complete truth when surveyed.

Correct. One downside of using self-report measures and surveys is that people often distort answers, either for lack of personal insight or because they want to appear more in a more positive light.

B) Her dormmates did not understand the question.

C) Alex did not calculate the findings correctly.

Incorrect. Alex may have calculated the findings correctly, but the findings may not represent the true behaviors of those with whom she spoke.

D) Surveys are not an acceptable means to gather new information.

63. Which correlation coefficient is most likely to describe the relationship between brushing one's teeth and the number of cavities one gets?

A) -.72

Correct. One would expect that as brushing increases, cavities tend to decrease. Thus, a negative correlation would best describe the relationship. Further, one would expect the relationship to be fairly strong and thus closer to 1.0 than to 0 in absolute value.

B) .93

Incorrect. This correlation coefficient would suggest that as brushing increases, the number of cavities increases. We would hope that the relationship between tooth brushing and the number of cavities one gets would be a strong negative correlation.

C) .08

D) .45

105. Lisa, a college student, had a great time at the party last night. She danced, sang karaoke, and even played the “rock band” video game—all behaviors that she had never exhibited in public before. She had been drinking the “punch” all night long, which she was told contained high levels of alcohol. Lisa was quite surprised to find out the next morning that the punch did NOT contain any alcohol. What concept may explain Lisa’s behavior?

- A) the Rosenthal effect
- B) illusory correlations
- C) the nocebo effect

Incorrect. The nocebo effect is harm resulting from the mere expectation of harm.

- D) the placebo effect

Correct. The placebo effect occurs when an inert treatment “works.” In this case, it would occur if the nonalcoholic punch produced more gregarious behavior.

Answer: D

Topic: Scientific Methodology: A Toolbox of Skills

113. How does conducting a double-blind study attempt to remedy the experimenter expectancy effect?

A) The experimenter does not know, but the participant does know, what condition the participant is assigned to.

Incorrect. This would be an example of a single blind study. In a double-blind study, neither the experimenter nor the participant knows which condition the participant has been assigned to.

B) The experimenter and the participant both know what condition the participant is assigned to.

C) The experimenter knows, but the participant does not know, what condition the participant is assigned to.

D) Neither the experimenter nor the participant knows what condition the participant is assigned to.

Correct. When neither the experimenter nor the participant knows what condition has been assigned, it eliminates the possibility of the placebo and experimenter effects.

114. In the case of Clever Hans, a teacher named Wilhelm von Oster claimed that he had taught his horse arithmetic, including square roots. As it turns out, the horse was merely responding to subtle, unintentional physical signals being given by von Oster. This demonstrates which principle of critical thinking?

A) extraordinary claims

Correct. It is certainly extraordinary to think that a horse can be taught to do higher math problems, but in this case, the evidence of the validity of the claims was not so extraordinary.

B) correlation vs. causation

C) replicability

D) Occam's Razor

Incorrect. The simplest explanation for the case of Clever Hans is that he was being unintentionally fed the correct answers, but the best answer to this case is extraordinary claims.

TEXT LO: 2.5a Identify flaws in research designs and how to correct them.

Topic: Evaluating Psychological Research

153. In one research project, a scientist gave students subliminal cassette tapes and told them to play them for 2 months. After 2 months, she assessed whether the tapes helped the self-esteem of her participants and found that self-esteem had indeed risen! While she may have attributed this to the tapes, it is also possible that those students may have found college life to be manageable and thus experienced an increase in self-esteem for that reason. This demonstrates which principle of critical thinking?

- A) correlation vs. causation
- B) extraordinary claims
- C) ruling out rival hypotheses

Correct. In this case, there are alternative explanations that must be considered before assuming that a research finding is accurate.

D) replicability

Incorrect. Nothing in this example addresses repeating the research with the goal of producing the same findings.

Answer: C

Topic: Evaluating Psychological Research

155. Professor Bowden is in the middle of her lecture on marital satisfaction when a student in the back interrupts her and says, "Dr. Phil doesn't agree with that theory!" Soon other students chime in to add fuel to the discussion. Professor Bowden just smiles and asks the original student to produce the research that Dr. Phil carried out to justify his statements. What lesson is Professor Bowden trying to teach?

A) Information from the media is always inaccurate.

B) One should never question a well-established theory.

Incorrect. It is one of the most important aspects of critical thinking that the theories should be questioned, whether they are or are not well-established.

C) Always check the source of your information before you believe it.

Correct. The authors discuss how we should be skeptical of psychology-related claims in the media, and look for scientific evidence.

D) Secondary sources are just as reliable as primary sources.

Topic: Evaluating Psychological Research

156. A key factor to consider when reading about the results of a study on the Internet, in a newspaper, or in a news magazine is to

A) consider the source of the information.

Correct. One must always consider the source from which information is drawn.

B) determine how well it fits with what others have told you in the past.

C) rely on your common sense or "gut" intuition.

D) popular media outlets always have inaccurate information.

Incorrect. It is entirely possible that the results of the study reported on the Internet, a newspaper, or in a newsmagazine are accurate. One must simply not accept that to be the case just because it is published.

Answer: A

Topic: Evaluating Psychological Research

% correct 88 a = 88 b = 12 c = 0 d = 0 r = .34

157. A major limitation in reading about the results of psychological research in the newspaper is that _____.

- A) reporters provide too much detailed information about the research study that the general public cannot comprehend in their articles
- B) reporters are so well-trained to discuss research that they cannot easily communicate about it with the average lay person
- C) reporters create controversy where none exists by treating scientific evidence and dissenter's biased opinions as equally compelling

Correct. This is an important point to make, because those without basis for opinions are often given the same weight as those who do have scientific basis for opinions.

- D) reporters do not know how to identify experts to interview for many of their stories and end up unintentionally misleading the public

Incorrect. Reporters may very well know how to interview people for their stories, but may choose to do so in such a way that makes the stories more sensational.

Essay

1. Why is it necessary for psychologists to have so many different research designs to study human behavior?

Answer: Answers will vary but should contain the following points for full credit.

- Each research design has its own important limitations. Students should identify at least two examples from two different designs to earn full credit.
- The goals of research differ (some focus on description, others on predictions, and others on establishing causation).
- If different methods produce similar results, this increases our confidence in our understanding of a particular phenomenon (idea of convergence).

Diff: 2

Skill: Factual

APA LO: 2.1

2. Discuss how the concept of the illusory correlation would explain a friend's complaint that his fraternity/her sorority (or other student group) is always being displayed in a negative light by the campus newspaper while other groups are not treated the same.

Answer: Answers will vary but should include the following to earn full credit.

- Student should define or describe what the illusory correlation is in his/her answer (either directly or demonstrate an understanding indirectly).
- The student should discuss the general ideas associated with the "Great Fourfold Table of Life" (Table 2.2).
- More specifically, he or she should focus on the fact that the student—in the question—is focusing on instances where negative portrayal of the fraternity/sorority are occurring but is neglecting stories about the fraternity/sorority that are positive or have no evaluative component. Likewise, the student—in the question—is also ignoring when other groups are discussed negatively or other negative stories that are irrelevant to friend's group are published.

3. Describe the roles of institutional review boards and statements of informed consent within the human research process.

Answer: Answers will vary but should contain the following for full credit.

- Institutional review boards (IRBs) exist to ensure that participants are protected against abuses from researchers. The members are drawn from different departments and must give their approval, and their concerns and requests for changes addressed, before research with human participants may begin.
- The informed consent ensures that participants understand what is being asked of them and what will be involved in their experience. Participants must be given enough information to make a decision to voluntarily participate in the research. If they are misled during the research, the missing information must be explained during a debriefing.

Diff: 2

Skill: Factual

APA LO: 3.1

TEXT LO: 2.3a Explain the ethical obligations of researchers toward their research participants.

Topic: Ethical Issues in Research Design

4. Explain why no single measure of central tendency and measure of dispersion exists that a researcher can use every single time.

Answer: Answers will vary but should contain the following information for full credit.

- Sometimes one measure is more appropriate than another. For example, the mean is distorted by the presence of outliers in a skewed distribution, so a researcher would be advised to report the median instead.
- It depends what information a researcher wants to highlight. For example, if a researcher wants to identify what was the most frequently endorsed option for a question, he or she would choose the mode. If he or she wants to report about how the scores were represented over all the possible answers, he or she would report the mean.
- Some people may wish to know the typical difference between scores and thus choose standard deviation, while others would look at the amount of difference from the most extreme scores and choose the range.
- A researcher cannot just report central tendency or dispersion because they each only tell part of the whole, either where scores are located (central tendency) or how much difference between scores is present (dispersion).

5. Illustrate why being an informed consumer about research, research designs, and statistics will be helpful in identifying incorrect statements about research in the media and on the Internet.

Answer: Answers will vary but should contain *at least four* of the following, and include the first idea, for full credit.

- Student should mention that understanding research designs will aid in identifying when statements of cause and effect are appropriate and when they are not. (Need to give supportive evidence for this and all statements to see that they truly demonstrate an understanding of each idea.)
- One will recognize misleading or inaccurate statistical statements.
- One will recognize when headlines are inaccurate summaries of the research results.
- One will recognize when reporters or writers have used sharpening or leveling.
- One will consider the source and whether the story coverage is balanced or whether it muddies the discussion.

Critical Thinking

Discuss why researchers need to be familiar with both descriptive and inferential statistics.

Answer: Answers will vary but should contain the following ideas for full credit.

- Student needs to mention that each gives a different kind of information because each has differing goals (organization and summarization for descriptive and generalization for inferential).
- Techniques in each can be misused in different ways to make effects appear that really are not accurate or appropriate.
- Often both are used in conjunction by the researcher rather than being two types that are chosen between (e.g., using the means of the groups to help see the statistically significant group differences).

CHAPTER 2: RESEARCH METHODS

Finding Relationships

1. A large group of people whom you want to know about is called a _____.

- a. control group
- b. treatment group
- c. population
- d. sample

Answer c % correct 79 a= 3 b= 3 c= 79 d= 16 r = .30

2. In an experiment to test the effects of anxiety on performance, the dependent variable is the _____.

- a. amount of anxiety
- b. age of the person
- c. person's performance
- d. cause of the anxiety

Answer c % correct 76 a= 18 b= 1 c= 76 d= 5 r = .30

3. A scientist, conducting a research study on sleep and learning, questions her own objectivity and decides to let a third person, not associated with conducting the experiment, score the tests. The scientist is probably trying to eliminate _____.

- a. experimenter bias
- b. sample bias
- c. control bias
- d. treatment bias

Answer a % correct 95 a= 95 b= 2 c= 3 d= 1 r = .25

4. Psychologists use research techniques based on _____.

- a. inductive reasoning
- b. objective introspection
- c. deductive reasoning
- d. the scientific method

Answer d % correct 86 a= 6 b= 3 c= 5 d= 86 r = .36

5. Research in which a carefully selected group of people is asked a set of predetermined questions in interviews or through questionnaires is known as _____.

- a. correlational research
- b. case study research
- c. survey research
- d. experimental research

Answer c % correct 83 a= 4 b= 13 c= 83 d= 0 r = .20

6. In an experiment, a researcher manipulates one variable to see how it affects a second variable. The second variable, which is observed for any possible effects, is called the _____.

- a. dependent variable
- b. control variable
- c. independent variable
- d. hypothetical variable

Answer a % correct 78 a= 78 b= 8 c= 9 d= 4 r = .47

7. A psychologist, studying pilot trainees, picks a select group of trainees who are hopefully representative of all other trainees. The group of trainees being studied by this psychologist are collectively known to researchers as a _____.

- a. sample
- b. population
- c. target group
- d. control group

Answer a % correct 81 a= 81 b= 8 c= 7 d= 4 r = .46

8. Expectations by the experimenter that might influence the results of an experiment or their interpretation are called _____.

- a. experimental blinds
- b. experimenter bias
- c. sample bias
- d. treatment bias

Answer b % correct 97 a= 1 b= 97 c= 1 d= 1 r = .29

9. In a controlled experiment, the group subjected to a change in the independent variable is called the _____ group.

- a. independent
- b. experimental
- c. dependent
- d. control

Answer b % correct 77 a= 2 b= 77 c= 9 d= 12 r = .34

10. A scientist, conducting a research study on sleep and learning, questions her own objectivity and decides to let a third person, not associated with conducting the experiment, score the tests. The scientist is probably trying to eliminate _____.

- a. experimenter bias
- b. sample bias
- c. control bias
- d. treatment bias

Answer a % correct 96 a= 96 b= 0 c= 4 d= 0 r = .21

11. A subset of cases selected from a larger population is a _____.

- a. control group
- b. target group
- c. treatment group
- d. sample

Answer d % correct 89 a= 1 b= 9 c= 1 d= 89 r = .28

12. If explanation of the causes of thoughts, feelings, and behavior is a psychologist's goal, then the _____ method of research should be used.

- a. correlational
- b. experimental
- c. survey
- d. naturalistic observation

Answer b % correct 45 a= 15 b= 45 c= 14 d= 26 r = .52

13. In a controlled experiment, the group not subjected to a change in the independent variable, and used for comparison with the group receiving the experimental change, is the _____ group.

- a. independent
- b. experimental
- c. dependent
- d. control

Answer d % correct 90 a= 3 b= 4 c= 4 d= 90 r = .42

14. A research method in which the real-life behavior of a pre-selected person or a group is studied at an in-depth level for some time through the use of observation, interviews, and writings (such as letters) is the _____ method of research.

- a. survey
- b. psychometric
- c. case study
- d. naturalistic observation

Answer c % correct 95 a= 3 b= 1 c= 95 d= 2 r = .20

15. In an experiment, a researcher manipulates one variable to see how it affects a second variable. The manipulated variable is called the:

- a. dependent variable.
- b. experimental variable.
- c. independent variable.
- d. placebo.

Answer c % correct 80 a= 14 b= 5 c= 80 d= 1 r = .45

16. A group of students was asked to write an essay in support of the legalization of marijuana. They were paid \$.50. Another group of students received \$2.00 for the same task. It was subsequently found that those students who received only \$.50 developed a more positive attitude towards the legalization of marijuana. The experiment in this study was using (the) _____.

- a. correlational method
- b. experimental method
- c. naturalistic observation
- d. survey research

Answer b % correct 44 a= 47 b= 44 c= 1 d= 8 r = .31

17. A sample that does not truly represent the population in question is known as a _____ sample.

- a. random
- b. chance
- c. biased
- d. representative

Answer c % correct 85 a= 13 b= 1 c= 85 d= 2 r = .36

18. A weakness of _____ is that subjects participating in the research often report, consciously and unconsciously, inaccurate information.

- a. naturalistic observation
- b. surveys
- c. field experiments
- d. laboratory experiments

Answer b % correct 80 a= 2 b= 80 c= 10 d= 8 r = .24

19. To obtain objective information, researchers sometimes must deceive their subjects. Ethically, research involving deception must always _____.

- a. pay participants
- b. maintain subject anonymity
- c. use double-blind control
- d. explain the deception to the subjects after the data are collected and obtain their informed consent to use the information obtained

Answer d % correct 95 a= 0 b= 3 c= 3 d= 95 r = .34

20. As part of an assignment, Bill's class was asked to complete an anonymous questionnaire on prejudice. Which research method was Bill's professor using?

- a. field experiment
- b. survey
- c. naturalistic observation
- d. laboratory experiment

Answer b % correct 98 a= 1 b= 98 c= 1 d= 1 r = .24

21. To determine if sugar-rich diets affect hyperactivity in kids, a researcher prepared two daily menus that children would receive for a 30-day period. A high-sugar diet was given to the boys, while the girls had a menu that seemed identical but was not a high sugar diet. At the end of 30 days, the boys and girls were evaluated to determine their levels of hyperactivity. In the study, the high-sugar diet is the _____.

- a. placebo
- b. independent variable
- c. dependent variable
- d. control group

Answer b % correct 65 a= 8 b= 65 c= 13 d= 14 r = .51

22. Using both independent and dependent variables is associated with which of the following types of research used in psychology?

- a. experimentation
- b. naturalistic observation
- c. correlation
- d. correlation and experimentation

Answer a % correct 55 a= 55 b= 1 c= 5 d= 39 r = .23

23. Manipulating an independent variable in a real-life setting is _____.

- a. an experiment
- b. an example of naturalistic observation
- c. a field experiment
- d. unethical

Answer c % correct 65 a= 17 b= 11 c= 65 d= 6 r = .45

24. Almost all research done in psychology is analyzed _____.

- a. visually
- b. using correlational techniques
- c. statistically
- d. at the .1 level

Answer c % correct 51 a= 13 b= 31 c= 51 d= 4 r = .34

25. As part of an assignment, Bill's class was asked to complete an anonymous questionnaire on sexual discrimination. Which research method was Bill's professor using?

- a. field experiment
- b. survey
- c. naturalistic observation
- d. laboratory experiment

Answer b % correct 97 a= 2 b= 97 c= 1 d= 0 r = .27

26. Collecting objective data without interference in the subject's normal environment is associated with _____.

- a. survey research
- b. applied research
- c. laboratory research
- d. naturalistic observation

Answer d % correct 95 a= 1 b= 1 c= 2 d= 95 r = .23

27. Experimenter bias can best be controlled using _____.

- a. a placebo
- b. double-blind control
- c. randomization
- d. subjects who do not know the purpose of the study

Answer b % correct 79 a= 2 b= 79 c= 16 d= 4 r = .46

28. A researcher, based on her review of relevant scientific studies, believes that there is a relationship between the frequency of a baby's crying and whether it was nursed at set intervals or on a demand schedule. If this belief were tested by experimentally manipulating feeding schedules, the feeding schedule would be called the:

- a. independent variable.
- b. dependent variable.
- c. extraneous variable.
- d. control factors.

Answer a % correct 76 a= 76 b= 17 c= 1 d= 6 r = .44

29. A researcher, based on her review of relevant scientific studies, believes that there is a relationship between the frequency of a baby's crying and whether it was nursed at set intervals or on a demand schedule. If this belief were tested by experimentally manipulating feeding schedules, frequency of crying would be called the:

- a. latent factor.
- b. dependent variable.
- c. independent variable.
- d. control factor.

Answer b % correct 64 a= 24 b= 64 c= 24 d= 9 r = .43

30. One of the main reasons for using a laboratory for psychological research is to:

- a. prevent subjects from escaping.
- b. study behavior in a natural setting.
- c. do large-scale studies.
- d. allow the researchers to control certain factors.

Answer d % correct 98 a= 0 b= 0 c= 2 d= 98 r = .33

31. The process of establishing causal relationships is associated most with:

- a. naturalistic observation.
- b. experiments.
- c. correlation.
- d. surveys.

Answer b % correct 33 a= 45 b= 33 c= 14 d= 9 r = .43

32. A researcher tests the hypothesis that students who study in the room where they take their tests will perform better on the tests than students who study in other rooms. She requires one group to study in the classroom where the exam is given and another group to study in the library. All students take the test in the classroom, and their test performance is compared. In this example, where students study is the:

- a. independent variable.
- b. dependent variable.
- c. manipulation.
- d. hypothesis.

Answer a % correct 64 a= 64 b= 22 c= 10 d= 3 r = .27

33. A researcher tests the hypothesis that students who study in the room where they take their tests will perform better on the tests than students who study in other rooms. She requires one group to study in the classroom where the exam is given and another group to study in the library. All students take the test in the classroom, and their test performance is compared. In this example, test performance is:

- a. the dependent variable.
- b. the independent variable.
- c. the manipulation.
- d. the control group.

Answer a % correct 67 a= 67 b= 16 c= 11 d= 7 r = .47

34. In psychological studies, randomization is used to ensure that:

- a. there will be an independent and dependent variable.
- b. each person has an equal chance of being assigned to each group.
- c. the control group does not know the purpose of the study.
- d. the experimenter won't know who is in each group.

Answer b % correct 84 a= 5 b= 84 c= 3 d= 7 r = .33

35. A "fake treatment" is one way to define a _____.

- a. decoy
- b. demand characteristic
- c. control group
- d. placebo

Answer d % correct 81 a= 7 b= 6 c= 6 d= 81 r = .39

36. In an experiment, a researcher manipulates one variable to see how it affects a second variable. The manipulated variable is called the _____.

- a. dependent variable
- b. control variable
- c. independent variable
- d. hypothetical variable

Answer c % correct 83 a= 12 b= 4 c= 83 d= 1 r = .46

37. In an experiment, a researcher manipulates one variable to see how it affects a second variable. The second variable, which is observed for any possible effects, is called the _____.

- a. dependent variable
- b. control variable
- c. independent variable
- d. hypothetical variable

Answer a % correct 87 a= 87 b= 1 c= 10 d= 3 r = .40

38. The method of psychological research which utilizes a control group, a dependent variable, and an independent variable is

- a. the experiment.
- b. the survey.
- c. the case study.
- d. naturalistic observation.

Answer a % correct 93 a= 93 b= 0 c= 4 d= 3 r = .21

39. Professor McSpell designed an experiment to test her hypothesis that exercise will increase spelling ability. She divided children into three groups and had one group do 10 minutes of exercises, one group do 30 minutes of exercises, and the third group do no exercise. She then tested all three groups of children to see how many words they could spell correctly on a spelling test. In this experiment, the scores on the spelling test serve as the

- a. dependent variable.
- b. independent variable.
- c. control group.
- d. reliability measure.

Answer a % correct 85 a= 85 b= 8 c= 0 d= 7 r = .46

40. Which of the following is a strength of experiments?

- a. They cannot be repeated by anyone other than the experimenter.
- b. They allow for the establishment of cause-effect relationships.
- c. They are not subject to demand characteristics since the subjects do not know they are being observed.
- d. They allow us to draw definitive conclusions about behavior in the natural environment based on subjects' behavior in the laboratory.

Answer b % correct 71 a= 0 b= 71 c= 5 d= 23 r = .25

41. In an experiment, the “measurable aspect of the behavior of the subject” is called the _____ variable.

- a. dependent
- b. focal
- c. independent
- d. control

Answer a % correct 76 a= 76 b= 1 c= 20 d= 3 r = .47

42. The purpose of an experiment is to discover whether there is a relationship between the _____ and the _____.

- a. independent variable; control variable
- b. dependent variable; control variable
- c. control group; experimental group
- d. independent variable; dependent variable

Answer d % correct 69 a= 4 b= 3 c= 24 d= 69 r = .30

43. Cause-and-effect conclusions can be drawn from the results of an experiment because:
- a. it is almost always performed in a laboratory setting.
 - b. statistical analysis can be applied to data from an experiment.
 - c. the independent variable is manipulated while other possible causes of change in the dependent variable are held constant.
 - d. several groups of subjects, not just one sample, are typically investigated in a laboratory experiment.

Answer c % correct 68 a= 4 b= 15 c= 68 d= 13 r = .28

44. Almost all research done in psychology is analyzed _____.

- a. visually
- b. using correlational techniques
- c. statistically
- d. at the .01 level

Answer c % correct 59 a= 15 b= 23 c= 59 d= 3 r = .27

45. In an experiment on the effects of level of motivation on the performance of typists, the researcher randomly assigned one third of her subjects to each of three levels of motivation (and then induced different levels of motivation in the three groups). She measured the average words typed per minute by each group, and found that performance was highest under medium motivation, average under low motivation, and worst under high motivation. What was the independent variable in this experiment?

- a. motivation
- b. typing speed
- c. variation in typing speed
- d. manipulation of typing speed

Answer a % correct 85 a= 85 b= 10 c= 3 d= 2 r = .40

46. A psychologist wanted to see if people are more prone to seek the company of others when anxious than when calm. He randomly assigned half of his subjects to an anxiety group and then told them that, as part of the study, they would receive electric shocks. He did not frighten the other group of subjects. Finally, he recorded how many subjects in each group chose to be "tested" in a group setting and how many chose to be "tested" alone. What was the independent variable in this study?

- a. tendency to desire the company of others
- b. level of shock
- c. level of anxiety
- d. the anxious group

Answer c % correct 54 a= 15 b= 22 c= 54 d= 9 r = .30

47. In an experiment, four groups of college students used different memorizing strategies to learn the material in one chapter of a textbook. Then each group was given the same multiple-choice test on the material. What was the dependent variable in this study?

- a. the students' performance on the test
- b. the four different groups
- c. the four different memorizing strategies
- d. manipulation of memorizing strategies

Answer a % correct 79 a= 79 b= 7 c= 9 d= 5 r = .58

48. A psychologist wanted to see if people are more prone to seek the company of others when anxious than when calm. He randomly assigned half of his subjects to an anxiety group and then told them that, as part of the study, they would receive electric shocks. He did not frighten the other group of subjects. Finally, he recorded how many subjects in each group chose to be "tested" in a group setting and how many chose to be "tested" alone. What was the dependent variable in this study?

- a. the two groups
- b. the level of anxiety
- c. preference for being alone or in a group
- d. manipulation of anxiety

Answer c % correct 77 a= 4 b= 10 c= 77 d= 10 r = .64

49. A psychologist wanted to see if people are more prone to seek the company of others when anxious than when calm. He randomly assigned half of his subjects to an anxiety group and then told them that, as part of the study, they would receive electric shocks. He did not frighten the other group of subjects. Finally, he recorded how many subjects in each group chose to be "tested" in a group setting and how many chose to be "tested" alone. In this study, the group that was NOT frightened would be called the _____ group.

- a. experimental
- b. control
- c. placebo
- d. test

Answer b % correct 90 a= 8 b= 90 c= 2 d= 0 r = .27

50. The purpose of a control group in an experiment is to:

- a. serve as a check on the interpretation of results.
- b. increase the ability to generalize the findings.
- c. manipulate the dependent variable.
- d. represent the general, nonlaboratory population.

Answer a % correct 59 a= 59 b= 5 c= 6 d= 30 r = .28

51. In an experiment, the group of subjects to which the experimental group is compared is called the:

- a. comparison group.
- b. standard group.
- c. confederate group.
- d. control group.

Answer d % correct 97 a= 2 b= 1 c= 0 d= 97 r = .21

52. In an experiment concerning the effect of auditory feedback on accuracy in writing computer programs, one group hears a computer-simulated voice say each character or symbol that they type in as they are writing their programs. The second group does not receive the auditory feedback as they type their program lines. This second group is the _____ group.

- a. experimental
- b. control
- c. placebo
- d. confederate

Answer b % correct 79 a= 16 b= 79 c= 3 d= 3 r = .25

53. Why is it essential that the experimental and control groups be treated identically in every respect but one?

- a. so that the dependent variable can be accurately measured
- b. so that the results will apply outside the laboratory setting.
- c. so that if the behavior of the two groups differs, the difference can be credited to the one thing that distinguished the groups from one another.
- d. so that if the behavior of the two groups differs, that difference can be used to establish a functional relationship between the independent and dependent variables.

Answer d % correct 40 a= 9 b= 1 c= 50 d= 40 r = .26

54. In an experiment, a researcher manipulates one variable to see how it affects a second variable. The manipulated variable is called the _____.

- a. dependent variable
- b. control variable
- c. independent variable
- d. hypothetical variable

Answer c % correct 77 a= 17 b= 6 c= 77 d= 0 r = .40

55. In an experiment, a researcher manipulates one variable to see how it affects a second variable. The second variable, which is observed for any possible effects, is called the _____.

- a. dependent variable
- b. control variable
- c. independent variable
- d. hypothetical variable

Answer a % correct 83 a= 83 b= 2 c= 14 d= 1 r = .45

56. As part of an assignment, Rick's class was asked to complete an anonymous questionnaire on female sexual harassment. Which research method was Bill's professor using?

- a. field experiment
- b. survey
- c. naturalistic observation
- d. laboratory experiment

Answer b % correct 97 a= 1 b= 97 c= 1 d= 0 r = .26

57. Collecting objective data without interference in the subject's normal environment is associated with:

- a. survey research.
- b. applied research.
- c. laboratory research.
- d. naturalistic observation.

Answer d % correct 94 a= 1 b= 2 c= 3 d= 94 r = .25

58. To determine if sugar-rich diets affect hyperactivity in kids, a researcher prepared two daily menus that children would receive for a 30-day period. A high-sugar diet was given to the boys, while the girls had a menu that seemed identical but was not a high sugar diet. At the end of 30 days, the boys and girls were evaluated to determine their levels of hyperactivity. In the study, the high-sugar diet is the _____.

- a. placebo
- b. independent variable
- c. dependent variable
- d. control group

Answer b % correct 82 a= 3 b= 82 c= 9 d= 5 r = .49

59. An experiment was run in which group A was given 3 minutes to study a word list, while group B was given 10 minutes to study the same list. Later, both groups were asked to recall words from the list. In this study, the number of words recalled is the _____.

- a. independent variable
- b. dependent variable
- c. placebo
- d. control group

Answer b % correct 82 a= 10 b= 82 c= 5 d= 3 r = 40.

60. Dr. Welsh is doing experiments using drugs. He is concerned that his subjects will respond to demand characteristics. He may want to control for this by using which of the following?

- a. stratification
- b. two independent variables
- c. a placebo
- d. randomization

Answer c % correct 70 a= 4 b= 5 c= 70 d= 21 r = .33

61. Mr. Marshall hired June to collect data from a group of subjects. Neither June nor the subjects were aware of the independent variable that Mr. Marshall had manipulated. This is an example of _____.

- a. randomization
- b. a placebo
- c. double-blind control
- d. experimenter bias

Answer c % correct 97 a= 2 b= 1 c= 97 d= 1 r = .20

62. Which of the following is NOT a strength of the experiment as a research method?

- a. Cause-and-effect relationships can be established.
- b. Experimental conditions usually seem realistic to subjects.
- c. Experiments can usually be replicated if the findings are valid.
- d. Variables can be analyzed carefully because of the degree of control over them.

Answer b % correct 72 a= 11 b= 72 c= 2 d= 15 r = .23

63. Keeping responses anonymous helps researchers avoid the ethical problem of _____.

- a. deception
- b. experimenter bias
- c. invasion of privacy
- d. animal rights violations

Answer c % correct 70 a= 7 b= 21 c= 70 d= 2 r = .41

Quiz 2.1: The Beauty and Necessity of Good Research Design

Key: Answer, Page, Type, Learning Objective, Level

Type

A=Applied

C=Conceptual

F=Factual

Level

(1)=Easy; (2)=Moderate; (3)=Difficult

LO=Learning Objective

SG=Used in Study Guide

p=page

Quiz: The Beauty and Necessity of Good Research Design

Multiple Choice Single Select

EOM Q2.1.1

Nobel prize winner Daniel Kahneman refers to intuitive thinking as System 1. What type of thinking does Kahneman refer to as System 2?

- a) analytical
- b) speculative
- c) descriptive
- d) impressionistic

ANS: a

Topic=The Beauty and Necessity of Good Research Design

Skill=Remember the Facts

Objective=LO 2.1a Identify two modes of thinking and their application to scientific reasoning

Difficulty=Easy

Consider This: We engage in this type of thinking whenever we are trying to reason through a problem. LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

EOM Q2.1.2

The cases of facilitated communication and lobotomies demonstrate that good research design is important because intelligent, well-trained people _____.

- a) can be swayed into believing that a treatment is effective when it is not
- b) usually do not conduct experiments
- c) can be passively cruel in their pursuit of an outcome
- d) only seek confirmatory evidence of their beliefs

ANS: a

Topic=The Beauty and Necessity of Good Research Design

Skill=Understand the Concepts

Objective=LO 2.1a Identify two modes of thinking and their application to scientific reasoning

Difficulty=Moderate

Consider This: These people also relied on intuitive thinking, relying largely on heuristics to infer whether a treatment was effective. LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

EOM Q2.1.3

A mental shortcut or general “rule of thumb” is referred to as a(n) _____ by psychologists.

- a) heuristic
- b) algorithm
- c) intuition
- d) deliberation

ANS: a

Topic=The Beauty and Necessity of Good Research Design

Skill=Apply What You Know

Objective=LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

Difficulty=Moderate

Consider This: These shortcuts can be useful, but sometimes they can let us down. LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

EOM Q2.1.4

Jerry is asked to estimate which is more common in the English language: Words that end in “ing” or words that have “-n-“ as the second-to-last letter. He mentally recites many examples of the first category (“running,” “jumping,” “flying,” “talking”) but can only think of a few examples of the second category (“sink,” “nine”). He judges that “ing” endings are more common, which of course is incorrect. (All words that end in “ing” also have “n” as the second-to-last letter; the addition of words that do not have an “i” and a “g” on either side of the “n” makes that second group larger.) After all this hubbub, it is clear that Jerry relied on _____ to reach his conclusion.

- a) System 1 thinking
- b) System 2 thinking
- c) analogical reasoning
- d) dialectical reasoning

ANS: a

Topic=The Beauty and Necessity of Good Research Design

Skill=Apply What You Know

Objective=LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

Difficulty=Difficult

Consider This: Jerry did what most of us would do when trying to solve this problem, although the result was incorrect. LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

EOM Q2.1.5

Analytical thinking is _____ compared to intuitive thinking.

- a) slow
- b) immediate
- c) painful
- d) heuristic

ANS: a

Topic=The Beauty and Necessity of Good Research Design

Skill=Remember the Facts

Objective=LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

Difficulty=Easy

Consider This: Modes of thinking have different strengths and weaknesses. LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

Quiz 2.2: Scientific Methodology: A Toolbox of Skills

Key: Answer, Page, Type, Learning Objective, Level

Type

A=Applied

C=Conceptual

F=Factual

Level

(1)=Easy; (2)=Moderate; (3)=Difficult

LO=Learning Objective

SG=Used in Study Guide

p=page

Quiz: Scientific Methodology: A Toolbox of Skills

Multiple Choice Single Select

EOM Q2.2.1

If we want to study people's actual behavior "in the wild" without them being influenced by the researcher, we can use _____.

- a) naturalistic observation
- b) repeated-measures designs
- c) correlational designs
- d) experimental designs

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Remember the Facts

Objective=LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Difficulty=Easy

Consider This: With this technique, we watch behavior take place without intervening. LO 2.2a

Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

EOM Q2.2.2

Sherri wants to design a self-report measure for her study of personality traits, but she knows she should be concerned that respondents might distort their answers, especially to paint themselves in a positive light.

This tendency is known as _____.

- a) a response set
- b) the halo effect
- c) a legitimacy set
- d) the mediator effect

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Apply What You Know

Objective=LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures. LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Difficulty=Moderate

Consider This: On an anonymous survey, would you be completely frank in your evaluation of yourself? LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

EOM Q2.2.3

The easiest way to determine if two variables are associated with one another is to use a(n) _____ research design.

- a) correlational
- b) experimental
- c) naturalistic
- d) case study

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Analyze It

Objective=LO 2.2b Describe the role of correlational designs and distinguish correlation from causation.

Difficulty=Easy

Consider This: Different research designs have associated strengths and weaknesses. Which kind of design would be most appropriate to the goals stated here? LO 2.2b Describe the role of correlational designs and distinguish correlation from causation.

EOM Q2.2.4

The only research designs that allow us the possibility of drawing cause-and-effect inferences are _____.

- a) experimental designs
- b) correlational designs
- c) survey methods
- d) naturalistic designs

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Apply What You Know

Objective=LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control for these pitfalls.

Difficulty=Moderate

Consider This: This research approach is the “gold standard” for determining causality. LO 2.2c

Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control for these pitfalls.

EOM Q2.2.5

The two ingredients that make a research study an experiment are 1) random assignment of participants to conditions, and 2) _____.

- a) manipulation of an independent variable
- b) manipulation of a dependent variable
- c) external validity gained through real-world control
- d) high inter-rater reliability

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Remember the Facts

Objective=LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control these pitfalls.

Difficulty=Easy

Consider This: Experimentation, by definition, requires these two features to be present at a minimum. LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control these pitfalls.

Quiz 2.3: Ethical Issues in Research Design

Key: Answer, Page, Type, Learning Objective, Level

Type

A=Applied

C=Conceptual

F=Factual

Level

(1)=Easy; (2)=Moderate; (3)=Difficult

LO=Learning Objective

SG=Used in Study Guide

p=page

Quiz: Ethical Issues in Research Design

Multiple Choice Single Select

EOM Q2.3.1

The APA Ethical Principles for Human Research state: “A contact [person] who can answer questions about the research and the participant’s rights should be provided.” This statement is most relevant in which of the following aspects of ethical research?

- a) informed consent
- b) protection from harm and discomfort
- c) deception and debriefing
- d) expectation of privacy

ANS: a

Topic=Ethical Issues in Research Design

Skill=Remember the Facts

Objective=LO 2.3a Explain the ethical obligations of researchers toward their research participants.

Difficulty=Easy

Consider This: Participants should be given enough information to make a reasonable decision regarding their participation in a research study. LO 2.3a Explain the ethical obligations of researchers toward their research participants.

EOM Q2.3.2

The authors accept the philosophical belief that science is _____; that is, neither good nor bad in itself.

- a) value-neutral
- b) ethically static
- c) morally indefensible
- d) conscience-free

ANS: a

Topic=Ethical Issues in Research Design

Skill=Understand the Concepts

Objective=LO 2.3a Explain the ethical obligations of researchers toward their research participants.

Difficulty=Moderate

Consider This: Scientific *research* is not considered to be this, as there are both ethical and unethical ways of searching for the truth. LO 2.3a Explain the ethical obligations of researchers toward their research participants.

EOM Q2.3.3

What shameful experiment was conducted over the course of 40 years to determine what would happen if syphilis was left to run its course in unsuspecting “subjects” (at a time when a cure for the disease was already available)?

- a) the Tuskegee study
- b) the Syphilis study
- c) the Milgram experiment
- d) the Vivisection experiment

ANS: a

Topic=Ethical Issues in Research Design

Skill=Apply What You Know

Objective=LO 2.3a Explain the ethical obligations of researchers toward their research participants.

Difficulty=Moderate

Consider This: The subjects did not know they were part of a research study, as the researchers had never informed them of that fact. LO 2.3a Explain the ethical obligations of researchers toward their research participants.

EOM Q2.3.4

Research involving animals can generate strong, often negative, feelings among people. This is especially so when the research involves _____ procedures that cause physical harm to the animals.

- a) invasive
- b) exploratory
- c) generative
- d) unplanned

ANS: a

Topic=Ethical Issues in Research Design

Skill=Understand the Concepts

Objective=LO 2.3b Describe both sides of the debate on the use of animals as research subjects

Difficulty=Difficult

Consider This: Researchers must weigh carefully the potential scientific gains of their inquiries against the costs in death and suffering they produce. LO 2.3b Describe both sides of the debate on the use of animals as research subjects.

EOM Q2.3.5

Why do most individuals on both sides of the animal rights debate believe that it is a bad idea for animal activists to release captive laboratory animals?

- a) Many of the animals die shortly after being released.
- b) Humans may be bitten or clawed by fleeing animals.
- c) The animals could spread diseases to the nearby human population.
- d) Cures for diseases might not be found without these animal subjects.

ANS: a

Topic=Ethical Issues in Research Design

Skill=Remember the Facts

Objective=LO 2.3b Describe both sides of the debate on the use of animals as research subjects.

Difficulty=Moderate

Consider This: Laboratory animals are typically bred and raised for that purpose. LO 2.3b Describe both sides of the debate on the use of animals as research subjects.

Quiz 2.4: The Language of Psychological Research

Key: Answer, Page, Type, Learning Objective, Level

Type

A=Applied

C=Conceptual

F=Factual

Level

(1)=Easy; (2)=Moderate; (3)=Difficult

LO=Learning Objective

SG=Used in Study Guide

p=page

Quiz: Statistics: The Language of Psychological Research

Multiple Choice Single Select

EOM Q2.4.1

Which term indicates applying mathematics to describe and analyze data?

- a) statistics
- b) information
- c) research
- d) science

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Remember the Facts

Objective=LO 2.4a Identify uses of various measures of central tendency and variability

Difficulty=Easy

Consider This: Psychologists use two different kinds: descriptive and inferential. LO 2.4a Identify uses of various measures of central tendency and variability.

EOM Q2.4.2

The technical term for a score that is much higher or lower than the typical responses, and might produce a misleading interpretation of the data set, is _____.

- a) an outlier
- b) a variable
- c) the range
- d) a skewer

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Apply What You Know

Objective=LO 2.4a Identify uses of various measures of central tendency and variability.

Difficulty=Moderate

Consider This: Imagine a situation where most people scored 53 on a test, but one person scored a 78 and another scored a 22. LO 2.4a Identify uses of various measures of central tendency and variability.

EOM Q2.4.3

Questions such as, “What is the average level of extraversion in this sample?” call for the use of which kind of statistics?

- a) descriptive
- b) inferential
- c) influential
- d) deterministic

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Remember the Facts

Objective=LO 2.4a Identify uses of various measures of central tendency and variability

Difficulty=Easy

Consider This: This term is used for techniques that summarize what is happening in a set of values.

LO 2.4a Identify uses of various measures of central tendency and variability.

EOM Q2.4.4

Freda is reading a journal article in psychology, and sees that a statistically significant outcome would have occurred by chance alone only 5 out of 100 times. This statement would be summarized in the journal article as _____.

- a) $p < .05$
- b) $p = 5\%$
- c) $p > .05$
- d) $p \times 5 = 100$

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Remember the Facts

Objective=LO 2.4b Explain how inferential statistics can help us to determine whether we can generalize from our sample to the full population.

Difficulty=Moderate

Consider This: If a result is likely to have occurred less than 5 times out of 100 by sheer chance alone, scientists usually agree that the result is statistically significant; that is, something noteworthy to be interpreted. LO 2.4b Explain how inferential statistics can help us to determine whether we can generalize from our sample to the full population.

EOM Q2.4.5

Mark Twain referred to three kinds of untruths: “Lies, damned lies, and statistics,” because _____.

- a) statistics sometimes can be used to mislead people
- b) inferential statistics are generally wrong
- c) descriptive statistics are generally wrong
- d) statisticians are generally unethical

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Analyze It

Objective=LO 2.4c Show how statistics can be misused for purposes of persuasion

Difficulty=Easy

Consider This: Understanding how basic statistical procedures work is the first step toward being able to counter the unscrupulous use of statistics in the service of advancing a particular point of view. LO 2.4c Show how statistics can be misused for purposes of persuasion.

Quiz 2.5: Evaluating Psychological Research

Key: Answer, Page, Type, Learning Objective, Level

Type

A=Applied

C=Conceptual

F=Factual

Level

(1)=Easy; (2)=Moderate; (3)=Difficult

LO=Learning Objective

SG=Used in Study Guide

p=page

Quiz: Evaluating Psychological Research

Multiple Choice Single Select

EOM Q2.5.1

Dr. Ingo Larsen is testing the effectiveness of a new memory-enhancing study technique. He greets each participant at the door and escorts them into either the control group (that receives the old memory technique) or the experimental group (that receives the new memory technique). He then conducts the experiment and analyzes the results. This is all quite problematic, because of the potential presence of _____.

- a) experimenter expectancy effects
- b) nocebo outcomes
- c) rival hypotheses
- d) sharpening and leveling

ANS: a

Topic=Evaluating Psychological Research

Skill=Analyze It

Objective=LO 2.5a Identify flaws in research designs and how to correct them.

Difficulty=Difficult

Consider This: To control for this effect and minimize confirmation bias, it might be better to keep Dr. Larsen blind to the group assignment when he collects data during the course of the study. LO 2.5a Identify flaws in research designs and how to correct them.

EOM Q2.5.2

One primary purpose of sending research articles to peer reviewers prior to publication is to _____.

- a) identify flaws in the research
- b) give those with opposing views equal time for rebuttal
- c) give everyone an equal chance to publish her or his research.
- d) maintain leadership among experts in the field

ANS: a

Topic=Evaluating Psychological Research

Skill=Understand the Concepts

Objective=LO 2.5a Identify flaws in research designs and how to correct them.

Difficulty=Moderate

Consider This: Outside reviewers screen the articles carefully for quality control. LO 2.5a Identify flaws in research designs and how to correct them.

EOM Q2.5.3

One important aspect of a research study that peer reviewers consider is whether the study considers alternate explanations. This is called _____.

- a) ruling out rival hypotheses
- b) diminishing internal validity
- c) generating counterfactuals
- d) rendering external validity

ANS: a

Topic=Evaluating Psychological Research

Skill=Understand the Concepts

Objective=LO 2.5a Identify flaws in research designs and how to correct them.

Difficulty=Moderate

Consider This: Research should be designed in such a way as to keep most elements constant while varying only the key elements under study. LO 2.5a Identify flaws in research designs and how to correct them.

EOM Q2.5.4

In the popular media (as opposed to scientific journals), research results can be presented in a misleading way because reporters have the tendency to exaggerate the gist or central message of the study. This is called _____.

- a) sharpening
- b) oversimplifying
- c) leveling
- d) dumbing down

ANS: a

Topic=Evaluating Psychological Research

Skill=Remember the Facts

Objective=LO 2.5b Identify skills for evaluating psychological claims in the popular media.

Difficulty=Easy

Consider This: Secondary sources in the news media need to engage in a certain amount of this when reporting studies, because they cannot possibly describe every detail that took place in a scientific investigation. LO 2.5b Identify skills for evaluating psychological claims in the popular media.

EOM Q2.5.5

Media reports have a tendency to try to present two opposing sides of an issue as though both sides were equally valid. What is this tendency called?

- a) pseudosymmetry
- b) balanced reporting
- c) placebo effect
- d) leveling

ANS: a

Topic=Evaluating Psychological Research

Skill=Understand the Concepts

Objective=LO 2.5b Identify skills for evaluating psychological claims in the popular media

Difficulty=Moderate

Consider This: This is also known as the appearance of a scientific controversy where none exists.

LO 2.5b Identify skills for evaluating psychological claims in the popular media.

Chapter 2 Quiz: Research Methods

Key: Answer, Page, Type, Learning Objective, Level

Type

A=Applied

C=Conceptual

F=Factual

Level

(1)=Easy; (2)=Moderate; (3)=Difficult

LO=Learning Objective

SG=Used in Study Guide

p=page

Chapter Quiz: Research Methods

Multiple Choice Single Select

EOC Q2.1

Bruno is asked to estimate which California city occupies a greater area: San Francisco or San Jose. “San Francisco is a big city,” he muses, “whereas San Jose is out in the suburbs. San Francisco must be bigger.” In actuality, San Francisco occupies about 48 square miles, compared to San Jose’s 180 square miles.

Bruno was misled because he relied on _____.

- a) a heuristic
- b) an algorithm
- c) System 2 thinking
- d) hegemony

ANS: a

Topic=The Beauty and Necessity of Good Research Design

Skill=Remember the Facts

Objective=LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

Difficulty=Easy

Consider This: Bruno made a quick judgment based on his intuitions about population and city size.

LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

EOC Q2.2

Naturalistic observation can be problematic if people realize they are being observed. This is because they might _____.

- a) change their behavior
- b) get angry and attack the researcher
- c) violate the external validity of the study
- d) report unethical behavior

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Understand the Concepts

Objective=LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Difficulty=Moderate

Consider This: Naturalistic behavior needs to be natural. LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures.

EOC Q2.3

Which term refers to the type of descriptive statistic that tells us where the scores tend to cluster in a set of measurements?

- a) central tendency
- b) variability
- c) standard deviation
- d) measure of range

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Apply What You Know

Objective=LO 2.4a Identify uses of various measures of central tendency and variability.

Difficulty=Moderate

Consider This: There are three measures of this: mean, median, and mode. LO 2.4a Identify uses of various measures of central tendency and variability.

EOC Q2.4

When we perceive a reliable association between two events (although none exists), such as the presence of rainy weather and arthritis flare-ups, we are experiencing the phenomenon called _____.

- a) statistical anomaly
- b) invalid assumption
- c) ethical mirage
- d) illusory correlation

ANS: d

Topic=The Scientific Method: Toolbox of Skills

Skill=Analyze It

Objective=LO 2.2b Describe the role of correlational designs and distinguish correlation from causation.

Difficulty=Difficult

Consider This: For 20 years, Wade Boggs ate chicken before every game, believing this particular habit was correlated with successful performance at bat. 2.2b Describe the role of correlational designs and distinguish correlation from causation.

EOC Q2.5

Which ethical procedure is being followed when researchers let test subjects know what they are likely to encounter during an experiment before the subjects agree to participate?

- a) informed consent
- b) debriefing
- c) scientific method
- d) institutional review

ANS: a

Topic=Ethical Issues in Research Design

Skill=Remember the Facts

Objective=LO 2.3a Explain the ethical obligations of researchers toward their research participants.

Difficulty=Easy

Consider This: During this process, participants can ask questions about the study and learn more about what will be involved. LO 2.3a Explain the ethical obligations of researchers toward their research participants.

EOC Q2.6

To be sure that we are not fooled by popular media reports about psychology research, we should be on the lookout for _____.

- a) sharpening and leveling
- b) dumbing down
- c) the placebo effect
- d) deliberate deception

ANS: a

Topic=Evaluating Psychological Research

Skill=Understand the Concepts

Objective=LO 2.5b Identify skills for evaluating psychological claims in the popular media.

Difficulty=Moderate

Consider This: This often ends up bringing the most important facts of a study into clearer focus, at the expense of pertinent details or caveats in the study. LO 2.5b Identify skills for evaluating psychological claims in the popular media.

EOC Q2.7

You want to design a study that will be high in internal validity and will allow you to infer causation.

Which research design should you use?

- a) experimental design
- b) correlational design
- c) case studies
- d) naturalistic observation

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Apply What You Know

Objective=LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control these pitfalls.

Difficulty=Moderate

Consider This: Researchers manipulate variables to see whether these manipulations produce differences in participants' behavior. LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control for these pitfalls.

EOC Q2.8

A central issue in considering medical and psychological research using animals is balancing the advances gained through such experimentation against _____.

- a) the costs in death and suffering they produce for the test subjects
- b) the backlash of animal rights activists
- c) possibly negative publicity focused on the research center
- d) the exorbitant financial costs of animal research

ANS: a

Topic=Ethical Issues in Research Design

Skill=Analyze It

Objective=LO 2.3b Describe both sides of the debate on the use of animals as research subjects.

Difficulty=Difficult

Consider This: Animal researchers are called upon to strike a balance between two basic considerations. LO 2.3b Describe both sides of the debate on the use of animals as research subjects.

EOC Q2.9

The process of soliciting feedback from qualified experts in a research area prior to publishing the results of a research study is called _____.

- a) peer review
- b) professional critique
- c) vetting for publication
- d) editorial correction

ANS: a

Topic=Evaluating Psychological

Skill=Remember the Facts

Objective=LO 2.5a Identify flaws in research designs and how to correct them.

Difficulty=Easy

Consider This: Nearly all psychological journals send submitted articles to outside reviewers, who screen the articles carefully for quality control. LO 2.5a Identify flaws in research designs and how to correct them.

EOC Q2.10

We say that a result has practical significance if it _____.

- a) makes a difference in the real world
- b) would occur by chance less than 5 times in 100
- c) results from manipulating a single variable
- d) is not statistically significant

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Remember the Facts

Objective=LO 2.4b Explain how inferential statistics can help us to determine whether we can generalize from our sample to the full population.

Difficulty=Easy

Consider This: There are different senses in which a research outcome might be "significant." LO 2.4b Explain how inferential statistics can help us to determine whether we can generalize from our sample to the full population.

EOC Q2.11

When a politician makes the statement that the average tax return will be \$5,000 for citizens of her state, we should be suspicious of her statistics. It would be more meaningful to report the _____ as a measure of central tendency.

- a) median or mode
- b) highest and lowest refunds
- c) refund of an individual "typical" taxpayer
- d) average of refunds in all similar states

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Understand the Concepts

Objective=LO 2.4c Show how statistics can be misused for purposes of persuasion.

Difficulty=Difficult

Consider This: There are multiple measures of central tendency for a reason; they reveal different kinds of information and have associated strengths and weaknesses. LO 2.4c Show how statistics can be misused for purposes of persuasion.

EOC Q2.12

Dr. Sardonicus is designing a case study in order to demonstrate that a particular psychological phenomenon actually happens. Case studies can be useful in providing this kind of demonstration, also known as _____.

- a) existence proof
- b) peer review
- c) internal validity
- d) external validity

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Apply What You Know

Objective=LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Difficulty=Moderate

Consider This: Before designing a fancy, complicated research study, a more basic question might be whether a phenomenon occurs at all. LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

EOC Q2.13

Which term describes a curved line on a graph that can be bell shaped, negatively skewed, or positively skewed?

- a) distribution curve
- b) truncated line graph
- c) bar graph
- d) scatterplot

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Analyze It

Objective=LO 2.4a Identify uses of various measures of central tendency and variability.

Difficulty=Difficult

Consider This: The examples listed are all possible shapes that a set of measurements might take when graphed. LO 2.4a Identify uses of various measures of central tendency and variability.

EOC Q2.14

The APA Ethical Principles for Human Research indicate that psychologists must take reasonable steps to _____.

- a) avoid harming participants
- b) ensure accurate data collection
- c) use human subjects instead of animals whenever possible
- d) use deceptive techniques

ANS: a

Topic=What is Psychology? Science Versus Intuition

Skill=Remember the Facts

Objective=LO 2.3a Explain the ethical obligations of researchers toward their research participants

Difficulty=Easy

Consider This: Psychological researchers must carefully attend to several principles when designing and conducting research. LO 2.3a Explain the ethical obligations of researchers toward their research participants.

EOC Q2.15

The story of how facilitated communication was debunked is a powerful illustration of the triumph of science over _____.

- a) pseudoscience
- b) autism
- c) child abuse
- d) affliction

ANS: a

Topic=The Beauty and Necessity of Good Research Design

Skill=Understand the Concepts

Objective=LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

Difficulty=Moderate

Consider This: Properly designed scientific studies have been able to show when treatments work and when they do not. LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

EOC Q2.16

You are reading an article in a psychology journal that has an accompanying, two-dimensional graph with dots representing data from individual people. This is called a _____.

- a) scatterplot
- b) scattershot
- c) data rendering
- d) point system

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Apply What You Know

Objective=LO 2.2b Describe the role of correlational designs and distinguish correlation from causation

Difficulty=Moderate

Consider This: Examining this type of graph can reveal patterns in the data, especially regarding how variables are related to one another. LO 2.2b Describe the role of correlational designs and distinguish correlation from causation.

EOC Q2.17

When evaluating a story about psychology research, we should generally place more confidence in a reputable science journal than a popular magazine. Which phrase encapsulates that idea?

- a) Consider the source.
- b) There are two sides to every story.
- c) Every cloud has a silver lining.
- d) You get what you pay for.

ANS: a

Topic=Evaluating Psychological Research

Skill=Remember the Facts

Objective=LO 2.5b Identify skills for evaluating psychological claims in the popular media.

Difficulty=Easy

Consider This: We should place more trust in findings from primary sources, such as original journal articles, than from secondary sources, such as newspapers, magazines, or websites. LO 2.5b Identify skills for evaluating psychological claims in the popular media.

EOC Q2.18

Because carefully controlled studies generate more trustworthy results, the high internal validity of these studies can lead to _____.

- a) high external validity
- b) correlation of causation
- c) further studies
- d) lack of falsifiability

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Understand the Concepts

Objective=LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control for these pitfalls.

Difficulty=Moderate

Consider This: Recall the distinction between internal and external validity. LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control for these pitfalls.

EOC Q2.19

The two kinds of statistics used by psychologists are descriptive statistics and _____ statistics.

- a) inferential
- b) variable
- c) ethical
- d) distributed

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Understand the Concepts

Objective=LO 2.4b Explain how inferential statistics can help us to determine whether we can generalize from our sample to the full population.

Difficulty=Easy

Consider This: These two types serve different functions; together, they help researchers fully understand what is going on in a set of measurements. LO 2.4b Explain how inferential statistics can help us to determine whether we can generalize from our sample to the full population.

EOC Q2.20

Which group at every major American research college and university reviews all research carefully to protect participants against abuses?

- a) institutional review board
- b) institutional research bureau
- c) investigative review bureau
- d) investigative research board

ANS: a

Topic=Ethical Issues in Research Design

Skill=Apply What You Know

Objective=LO 2.3a Explain the ethical obligations of researchers toward their research participants.

Difficulty=Moderate

Consider This: IRBs typically consist of faculty members drawn from various departments within a college or university, as well as one or more outside members, such as a person drawn from the nearby community. LO 2.3a Explain the ethical obligations of researchers toward their research participants.

EOC Q2.21

The type of thinking that allows us to operate on "autopilot" and make snap decisions is called

_____.

- a) intuitive
- b) analogical
- c) analytical
- d) System 2

ANS: a

Topic=The Beauty and Necessity of Good Research Design

Skill=Remember the Facts

Objective=LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

Difficulty=Easy

Consider This: We engage in this type of thinking when we meet someone new and form an immediate first impression of him or her. LO 2.1a Identify two modes of thinking and their application to scientific reasoning.

EOC Q2.22

Questionnaires fall into which category of measurement tools?

- a) self-report measures
- b) test-retest measures
- c) interrater reliability measures
- d) validity measures

ANS: a

Topic=The Scientific Method: Toolbox of Skills

Skill=Remember the Facts

Objective=LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

Difficulty=Easy

Consider This: If we want to find out about someone's personality and attitudes, a good place to start is to ask them directly. LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.

EOC Q2.23

Megan wanted to get a measure of the amount of variability in her set of data, so she subtracted the lowest score from the highest score. Megan computed the _____.

- a) range
- b) standard of deviation
- c) inferential
- d) integral

ANS: a

Topic=Statistics: The Language of Psychological Research

Skill=Apply What You Know

Objective=LO 2.4a Identify uses of various measures of central tendency and variability

Difficulty=Moderate

Consider This: Although this is the easiest measure of variability to calculate, it can be deceptive.

LO 2.4a Identify uses of various measures of central tendency and variability.

EOC Q2.24

In a study in which college students are pampered (given endless amounts of money, cable TV, and spicy Chinese food) to see whether this will improve their scores in their psychology course, what is the *independent variable*?

- a) whether students were pampered or not
- b) students' scores on the next psychology midterm
- c) students' scores on the next midterm minus the baseline score
- d) students' previous scores (or baseline) on psychology midterms

ANS: a

Topic=What Is Psychology? Science Versus Intuition

Skill=Analyze It

Objective=LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control for these pitfalls.

Difficulty=Difficult

Consider This: Think about why the independent variable is called that. LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control for these pitfalls.

EOC Q2.25

If subjects' scores on a self-esteem scale are consistent over time, the scale has high _____ reliability.

- a) test-retest
- b) interrater
- c) interlocutor
- d) Meehl-determinant

ANS: a

Topic=Scientific Method: Toolbox of Skills

Skill=Understand the Concepts

Objective=LO 2.2c Identify the components of an experiment, the potential pitfalls that can lead to faulty conclusions, and how psychologists control these pitfalls.

Difficulty=Moderate

Consider This: The focus here is on stability over an extended period. LO 2.2a Describe the advantages and disadvantages of using naturalistic observation, case studies, self-report measures, and surveys.
