

***Foundations of Finance, 10e (Keown/Martin/Petty)***  
**Chapter 2 The Financial Markets and Interest Rates**

Learning Objective 2.1

1) Common stock is considered a short-term security because it has no maturity date and a long-term security is one with a maturity date of more than one year.

Answer: FALSE

Diff: 1 Page Ref: 23

Keywords: Long-term Capital

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

2) Saving surplus units include individuals and governments, but not corporations.

Answer: FALSE

Diff: 1 Page Ref: 24

Keywords: Capital Markets, Savings Surplus Units

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

3) Individuals, corporations, and governments can be either savings deficit units or savings surplus units.

Answer: TRUE

Diff: 1 Page Ref: 24

Keywords: Capital Markets, Savings Surplus Units, Savings Deficit

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

4) A corporation needing cash sells securities to investors in the secondary market.

Answer: FALSE

Diff: 1 Page Ref: 26

Keywords: Secondary Market

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

5) Part of the U.S. Government's huge deficit is financed by foreign countries, such as China, which is a savings surplus unit.

Answer: TRUE

Diff: 1 Page Ref: 24, 25

Keywords: Capital Markets, Savings Surplus Units

Learning Obj.: L.O. 2.1

AACSB: Diverse and Multicultural Work Environments

6) Venture capitalists typically provide funds to high-risk startup companies but take no active role in their management.

Answer: FALSE

Diff: 1 Page Ref: 25, 26

Keywords: Venture Capitalist

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

7) Seasoned secondary offerings occur in the secondary market.

Answer: FALSE

Diff: 1 Page Ref: 26

Keywords: Seasoned Secondary Offering, Secondary Market

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

8) Capital markets are all the financial institutions that help a business raise long-term capital.

Answer: TRUE

Diff: 1 Page Ref: 23

Keywords: Capital Markets

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

9) Transactions in the futures markets involve current payments for goods which will be delivered at some future agreed upon date.

Answer: FALSE

Diff: 1 Page Ref: 27

Keywords: Futures Market

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

10) Organized stock exchanges provide the benefits of a continuous market, fair security pricing, and helping businesses raise new capital.

Answer: TRUE

Diff: 1 Page Ref: 28

Keywords: Organized Stock Exchanges

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

11) On the basis of number of shares traded, more stocks are traded over the counter than on organized exchanges.

Answer: TRUE

Diff: 1 Page Ref: 27

Keywords: Organized Stock Exchanges, Over-The-Counter Markets

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

12) Stocks listed on the New York Stock Exchange must be traded exclusively on the NYSE in order to maintain the high standards set by the exchange.

Answer: FALSE

Diff: 1 Page Ref: 28

Keywords: New York Stock Exchange, NYSE

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

13) One advantage of being listed on the NYSE is that all trades are made in an auction setting with face-to-face trading between individuals on the floor of the stock exchange.

Answer: FALSE

Diff: 1 Page Ref: 28

Keywords: New York Stock Exchange, NYSE

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

14) One advantage of organized stock exchanges is increased stock price volatility resulting from the efficient exchange of pricing information.

Answer: FALSE

Diff: 2 Page Ref: 28

Keywords: Stock Exchange, Price Volatility

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

15) Three ways that savings can be transferred through the financial markets to those in need of funds include direct transfers, indirect transfers using the investment banker, and indirect transfers using the financial intermediary.

Answer: TRUE

Diff: 1 Page Ref: 24, 25

Keywords: Capital Markets, Direct Transfer, Indirect Transfer

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

16) Flotation costs are typically greater in the secondary market than in the primary market.

Answer: FALSE

Diff: 1 Page Ref: 26, 33

Keywords: Flotation Costs, Secondary Market, Primary Market

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

17) Each purchase occurring in the secondary markets increases the total stock of financial assets that exist in the economy.

Answer: FALSE

Diff: 1 Page Ref: 26

Keywords: Secondary Market

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

18) The money market includes transactions in short-term financial instruments.

Answer: TRUE

Diff: 1 Page Ref: 27

Keywords: Money Market

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

19) Over-the-counter markets include all security markets, with the exception of organized exchanges.

Answer: TRUE

Diff: 1 Page Ref: 27

Keywords: Over-the-Counter Markets, Organized Exchanges

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

20) For a firm to have its securities listed on an exchange, it must meet certain requirements. These usually include measures of profitability, size, market value, and public ownership.

Answer: TRUE

Diff: 1 Page Ref: 28

Keywords: Stock Exchange, Listing Requirements

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

21) The vast majority of corporate bond business takes place over the counter.

Answer: TRUE

Diff: 1 Page Ref: 27

Keywords: Corporate Bonds, Over the Counter Markets

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

22) Financial markets exist in order to allocate savings in the economy to the demanders of those savings.

Answer: TRUE

Diff: 1 Page Ref: 25

Keywords: Financial Markets

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

23) A seasoned equity offering is the sale of additional shares by a company whose shares are already publicly traded.

Answer: TRUE

Diff: 1 Page Ref: 26

Keywords: Seasoned Equity Offering

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

24) Primary market transactions cannot be undertaken in over the counter markets.

Answer: FALSE

Diff: 2 Page Ref: 26, 27

Keywords: Primary Market, Over the Counter Markets, Money Markets

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

25) Financial intermediaries issue their own indirect securities and use the proceeds to purchase the direct securities of other economic units.

Answer: TRUE

Diff: 1 Page Ref: 25

Keywords: Financial Intermediaries, Indirect Securities, Direct Securities

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

26) Cash markets are often referred to as spot markets.

Answer: TRUE

Diff: 1 Page Ref: 27

Keywords: Spot Markets, Cash Markets

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

27) Transactions in common stock occur in the money market, due to the large amount of money involved in such transactions.

Answer: FALSE

Diff: 2 Page Ref: 27

Keywords: Money Market, Common Stock

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

28) Registration of securities by the SEC indicates to investors that the risk of those securities is reasonable.

Answer: FALSE

Diff: 2 Page Ref: 28

Keywords: SEC, Registration of Securities

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

29) Preferred stock is traded in the money market, while common stock is traded in the capital market.

Answer: FALSE

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

60) The New York Stock Exchange (NYSE) is

A) an automated electronic trading platform.

B) an auction market with face-to-face trading on the floor of the stock exchange in addition to automated, electronic trading.

C) a hybrid market, allowing for face-to-face trading on the floor of the stock exchange in addition to automated, electronic trading.

D) primarily a futures market.

Answer: C

Diff: 1 Page Ref: 28

Keywords: New York Stock Exchange, NYSE

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

61) Explain the difference between (a) public offerings and private placements, (b) primary markets and secondary markets, (c) the money market and the capital market, and (d) organized security exchanges and over-the-counter markets.

Answer: In a public offering, securities are usually made available to the public at large by an investment-banking firm, which is a firm that specializes in helping other firms raise money. In a private placement, also called a direct placement, the securities are offered and sold directly to a limited number of investors. The firm will usually deal directly with the prospective buyers. In this setting, the investment-banking firm may act as a finder by bringing together potential lenders and borrowers.

A primary market is a market in which new, as opposed to previously issued, securities are traded. The secondary market is where currently outstanding securities are traded.

The money market refers to transactions in short-term debt instruments, with "short-term" meaning maturity periods of 1 year or less. The capital market refers to the market for long-term financial instruments. "Long-term" here means having maturity periods that extend beyond 1 year.

Organized security exchanges are tangible entities; that is, they physically occupy space (such as a building or part of a building), and financial instruments are traded on their premises. The over-the-counter markets include all security markets except the organized exchanges.

Diff: 2 Page Ref: 25, 26, 27, 28

Keywords: Capital Markets

Learning Obj.: L.O. 2.1

AACSB: Reflective Thinking

62) Name the benefits derived from the existence of stock exchanges.

Answer: Providing a continuous market: it may be the most important function of an organized security exchange. A continuous market provides a series of continuous security prices.

Establishing and publicizing fair security prices: An organized exchange permits security prices to be set by competitive forces. The bidding process flows from the supply and demand underlying each security. This means the specific price of a security is determined in the manner of an auction. In addition, the security prices determined at each exchange are widely publicized. Helping business raise new capital: Because a continuous secondary market exists, it is easier for firms to float, or issue, new security offerings at competitively determined prices.

46) What are the three major functions of an investment banker?

Answer: The investment banker performs three basic functions: (1) underwriting, (2) distributing, and (3) advising.

Underwriting: The term underwriting is borrowed from the field of insurance. It means assuming a risk. The investment banker assumes the risk of selling a security issued at a satisfactory price. A satisfactory price is one that generates a profit for the investment-banking house. A syndicate is a group of other investment bankers that is invited to help buy and resell the issue.

Distributing: Once the syndicate owns the new securities, it must get them into the hands of the ultimate investors. This is the distribution or selling function of investment banking. The investment banker may have branch offices across the United States, or it may have an informal arrangement with several security dealers who regularly buy a portion of each new offering for final sale. It is not unusual to have 300 to 400 dealers involved in the selling effort. The syndicate can properly be viewed as the security wholesaler, and the dealer organization can be viewed as the security retailer.

Advising: The investment banker is an expert in the issuance and marketing of securities. A sound investment-banking house will be aware of prevailing market conditions and can relate those conditions to the particular type of security and the price at which it should be sold at a given time.

Diff: 1 Page Ref: 29, 30

Keywords: Investment Banker

Learning Obj.: L.O. 2.2

AACSB: Reflective Thinking

47) What are the five key methods by which securities are distributed to final investors?

**Answer: A Negotiated Purchase:** In a negotiated underwriting, the firm that needs funds makes contact with an investment banker, and deliberations concerning the new issue begin. If all goes well, a method is negotiated for determining the price the investment banker and the syndicate will pay for the securities. The negotiated purchase is the most prevalent method of securities distribution in the private sector.

**A Competitive Bid Purchase:** In a competitive underwriting, several underwriting groups bid for the right to purchase the new issue from the corporation that is raising funds. The firm does not directly select the investment banker. Instead, the investment banker that underwrites and distributes the issue is chosen by an auction process. The one willing to pay the greatest dollar amount per new security will win the competitive bid.

**A Commission or Best-Efforts Basis:** Here, the investment banker acts as an agent rather than as a principal in the distribution process. The securities are not underwritten. The investment banker attempts to sell the issue in return for a fixed commission on each security actually sold. Unsold securities are then returned to the corporation. This arrangement is typically used for more speculative issues.

**A Privileged Subscription:** When a new issue is marketed to a definite and select group of investors, it is called a privileged subscription. Three target markets are typically involved: (1) current stockholders, (2) employees, or (3) customers of the firm. Of these, distributions directed at current stockholders are the most prevalent. Such offerings are called rights offerings. In a privileged subscription, the investment banker may act only as a selling agent. It is also possible that the issuing firm and the investment banker might sign a standby agreement, which obligates the investment banker to underwrite the securities that are not purchased by the privileged investors.

**A Direct Sale:** In a direct sale the issuing firm sells the securities directly to the investing public without involving an investment banker.

AACSB: Reflective Thinking

48) Within the financial markets, explain what we mean by "private placements" and name the advantages and disadvantages.

Answer: Private placements are an alternative to the sale of securities to the public or to a restricted group of investors through a privileged subscription. Any type of security can be privately placed (directly placed). The major investors in private placements are large financial institutions. Based on the volume of securities purchased, the three most important investor groups are (1) life insurance companies, (2) state and local retirement funds, and (3) private pension funds.

Private placements have advantages and disadvantages compared with public offerings.

The advantages associated with private placements are:

1. Speed: The firm usually obtains funds more quickly through a private placement than a public offering. The major reason is that registration of the issue with the SEC is not required.
2. Reduced costs: These savings result because the lengthy registration statement for the SEC does not have to be prepared, and the investment-banking underwriting and distribution costs do not have to be absorbed.
3. Financing flexibility: In a private placement, the firm deals on a face-to-face basis with a small number of investors. This means that the terms of the issue can be tailored to meet the specific needs of the company.

The following disadvantages of private placements must be evaluated.

1. Interest costs: It is generally conceded that interest costs on private placements exceed those of public issues. Whether this disadvantage is enough to offset the reduced costs associated with a private placement is a determination the financial manager must make.
2. Restrictive covenants: A firm's dividend policy, working capital levels, and the raising of additional debt capital may all be affected by burdensome provisions especially in the private placement debt contract.
3. The possibility of future SEC registration: If the lender (investor) should decide to sell the issue to a public buyer before maturity, the issue must be registered with the SEC. Some lenders, then, require that the issuing firm agree to a future registration at their option.

17) Suppose the following rates are averages for banks in your area: interest checking accounts pay 1%, savings accounts pay 2%, and one-year certificates of deposit pay 3%. All accounts are federally insured by the FDIC. The difference in rates can be explained mainly by

- A) liquidity premiums.
- B) default risk premiums.
- C) maturity premiums.
- D) inflation risk premiums.

Answer: A

Diff: 2 Page Ref: 37

Keywords: Liquidity Premium

Learning Obj.: L.O. 2.3

AACSB: Reflective Thinking

18) Examine the securities below and identify the security with the highest liquidity premium, the highest default risk premium, and the highest maturity premium.

- a. 30-year U.S. Government Treasury bond maturing in 2025
- b. 25-year Bbb-rated corporate bond maturing in 2030, actively traded on the New York Exchange
- c. 10-year Aaa-rated corporate bond maturing in 2020, thinly traded on a regional exchange
- d. 3-month U.S. Treasury bill

Answer: The 10-year Aaa-rated corporate bond has the highest liquidity premium because it is not actively traded and may be difficult to turn into cash on short notice. The Bbb-rated corporate bond has the highest default risk premium. The U.S. Government securities are virtually default risk free, and the other corporate bond is Aaa rated. The 25-year Bbb-rated corporate bond maturing in 2030 has the highest maturity premium. Although the Treasury bond had a longer maturity when issued, currently the 25-year Bbb bond has the longest time left to maturity.

9) You are considering an investment in a U.S. Treasury bond but you are not sure what rate of interest it should pay. Assume that the real risk-free rate of interest is 1.0%; inflation is expected to be 1.5%; the maturity risk premium is 2.5%; and, the default risk premium for AAA rated corporate bonds is 3.5%. What rate of interest should the U.S. Treasury bond pay?

- A) 8.5%
- B) 6.0%
- C) 5.0%
- D) 2.5%

Answer: C

14) Which of the following premiums is NOT factored into the price of a long-term Treasury bond?

- A) a real risk-free interest rate
- B) a maturity premium
- C) a default-risk premium
- D) an inflation-risk premium

Answer: C

AACSB: Reflective Thinking

16) The nominal interest rate is 7% and the expected inflation rate is 2%. Based on the Fisher effect, the real rate of interest is

- A) 5.0%.
- B) 6.86%.
- C) 5.1%.
- D) 4.9%.

Answer: D

17) Given the anticipated rate of inflation (i) of 1.7% and the real rate of interest (R) of 1.4%, find the nominal rate of interest (r).

Answer:  $r = R + i + Ri$

$$r = .014 + .017 + (.014)(.017)$$

$$r = .031 + .000238 = .031238$$

$$r = 3.12\%$$

AACSB: Analytical Thinking

18) Given the rate information in the table below, estimate the nominal rate for a AA-rated corporate bond. Assume a liquidity premium of 8 basis points. Identify as part of your answer the inflation risk premium, the default risk premium, the maturity premium, and the liquidity premium.

3-month T-bills	2.0%
30-year Treasury bonds	5.0%
AA-rated corp. bonds	8.0%
Inflation Rate	1.0%

Answer:  $k^* = 2.0\% - 1.0\% = 1.0\%$

IRP = 1.0%

DRP = 8.0% - 5.0% = 3.0%

MP = 5.0% - 2.0% = 3.0%

LP = .08% (given)

$K = 1.0\% + 1.0\% + 3.0\% + 3.0\% + .08\% = 8.08\%$

Diff: 3 Page Ref: 40

19) An investor buys a 20-year Bbb-rated corporate bond with a nominal annual rate of return of 10%. The average inflation rate is expected to be 2%. The default risk premium is expected to be 5% and the maturity premium is 4%. Calculate the real rate of interest.

Answer:  $k_{rf} = k^* + IRP + (k^* \times IRP)$

$10\% = k^* + 2\% + (k^* \times 2\%)$

$8\% = 1.02 k^*$

$7.84\% = k^*$

AACSB: Analytical Thinking

20) The current rate of return on a one-year U.S. Government security is 3%. The rate of return on a two-year U.S. Government security is 5%. According to the expectations theory, what is the return on a one-year U.S. Government security purchased one year from today?

Answer:  $\$1,000 \times 1.03 = \$1,030$  at the end of year one

$\$1,000 \times (1.05)^2 = \$1,102.50$  at the end of two years

$\$1,102.50 - \$1,030 = \$72.50$  interest needed in year 2

$\$72.50/\$1,030 = 7.04\%$

Diff: 3 Page Ref: 45, 46

21) The date today is January 1, 2010. A one-year security maturing on 1/1/11 yields 3%. A two-year security maturing on 1/1/12 yields 6%. A three-year security maturing on 1/1/13 yields 11%. Calculate the expected annual return on a two-year security beginning 1/1/11 and maturing on 1/1/13.

Answer:  $\$1,000 \times (1.11)^3 = \$1,367.63$  at the end of three years (1/1/13)

$\$1,000 \times (1.03) = \$1,030$  at the end of one year (1/1/11)

$\$1,367.63 - \$1,030 = \$337.63$  to be earned on two-year security from 1/1/11 to 1/1/13

$\$1,030 \times (1 + k)^2 = \$1,367.63$

$k = (\$1,367.63/\$1,030)^{.5} - 1 = 15.23\%$

22) If provided the nominal rate of interest (r) of 7.4% and the anticipated rate of inflation (i) of 4.5%, what is the real rate of interest (R)?

Answer:  $r = R + i + Ri$

$.074 = R + .045 + (.045)(R)$

$.074 - .045 = 1.045R$

$.029 = 1.045R$

$R = .02775 = 2.78\%$

AACSB: Analytical Thinking

23) Given the anticipated rate of inflation (i) of 2.13% and the real rate of interest (R) of 3.1%, find the nominal rate of interest (r).

Answer:  $r = R + i + Ri$

$r = .031 + .0213 + (.031)(.0213)$

$r = .0523 + .0006603$

$r = .05296 = 5.3\%$

AACSB: Analytical Thinking

24) The yield curve in 2009 was very low, with short-term rates close to zero and long-term rates below 5 percent. What factors contributed to such low interest rates?

Answer: In response to the banking and economic crises, the U.S. Government undertook policies to reduce interest rates in an attempt to stimulate economic activity. In addition, the recession caused a decrease in the demand for borrowed funds, and investors, scared off by large declines in the stock market, moved money into safer U.S. Treasury securities. Increasing Treasury prices mean lower yields.

AACSB: Reflective Thinking

25) Identify three prominent theories that attempt to explain the term structure of interest rates.

Answer: Three possible theories may explain the shape of the term structure of interest rates at any point in time:

The Unbiased Expectations Theory: The theory says that the term structure is determined by an investor's expectations about future interest rates.

The Liquidity Preference Theory: According to the theory, investors require maturity-risk premiums to compensate them for buying securities that expose them to the risks of fluctuating interest rates.

The Market Segmentation Theory: The theory implies that the rate of interest for a particular maturity is determined solely by demand and supply for a given maturity and that it is independent of the demand and supply for securities having different maturities.
