## Chapter 2 <br> Job Order Costing

## Review Questions

1. If the manager knows the cost to produce each unit of product, then the manager can plan for and control the cost of resources needed to create the product and deliver it to the customer. It enables them to determine which product to produce, set sales prices that will lead to profits, determine how many products to produce, compute cost of goods sold for the income statement, and compute the cost of inventory for the balance sheet.
2. Companies that manufacture unique products or provide specialized services, such as accounting firms, music studios, health-care providers, building contractors, and custom furniture manufacturers, use job order costing systems.
3. Companies that produce identical units through a series of production steps or processes, such as soft drink companies, surfboard manufacturers, and medical equipment manufacturers, use process costing systems.
4. A job cost record is a document that shows the direct materials, direct labor, and manufacturing overhead costs for an individual job and allows the company to track the costs of individual jobs.
5. When a company finishes a job, it totals the costs and transfers them to Finished Goods Inventory, an asset account. These costs are called Cost of Goods Manufactured. When the job's units are sold, the costing system moves the costs from Finished Goods Inventory, an asset, to Cost of Goods Sold, an expense. These costs are called Cost of Goods Sold.
6. May 31—Work-in-Process Inventory on the balance sheet; June 30-Finished Goods Inventory on the balance sheet; July 31-Cost of Goods Sold on the income statement.
7. 

| Date | Accounts and Explanation | Debit | Credit |
| ---: | :---: | ---: | ---: |
|  | Raw Materials Inventory <br> Accounts Payable | XX |  |
|  |  | XX |  |

This transaction increases assets (Raw Materials Inventory) and increases liabilities (Accounts Payable).
8. The use of a raw materials subsidiary ledger allows for better control of inventory as it helps track the quantity and cost of each type of material used in production. A subsidiary ledger contains the details of a general ledger account, and the sum of the accounts in the subsidiary ledger equals the balance in the general ledger account.
9. The cost of direct materials is transferred out of Raw Materials Inventory (credit) and is assigned to Work-in-Process Inventory (debit). The cost of indirect materials is transferred out of the Raw Materials Inventory account (credit) and is accumulated in the Manufacturing Overhead account (debit).
10.

| Date | Accounts and Explanation | Debit | Credit |
| :---: | :--- | ---: | ---: |
|  | $\begin{array}{l}\text { Work-In-Process Inventory (direct labor) } \\ \text { Manufacturing Overhead (indirect labor) } \\ \text { Wages Payable }\end{array}$ | XX | XX |$] \mathrm{XX}$ (

This transaction increases assets (Work-in-Process Inventory), increases liabilities (Wages Payable), and decreases equity (Manufacturing Overhead).
11. Student answer will vary. The following are some examples of manufacturing overhead costs:
a. Plant utilities
b. Depreciation on manufacturing plant and equipment
c. Plant insurance
d. Plant property taxes
e. Rent on the manufacturing plant

They are considered indirect costs because they can't be easily traced to individual jobs.
12. The predetermined overhead allocation rate is the estimated manufacturing overhead cost per unit of the allocation base, calculated at the beginning of the period.
13. The allocation base is a denominator that links overhead costs to the products. Ideally, the allocation base is the primary cost driver of manufacturing overhead. Examples: direct labor hours, direct labor cost, machine hours.
14. Manufacturing overhead is allocated to jobs based on a predetermined overhead allocation rate. The rate should be based on the primary cost driver.
15. Unit product cost $=$ Cost of goods manufactured $/$ Total units produced.
16. To allocate manufacturing overhead, Work-in-Process Inventory is debited and Manufacturing Overhead is credited. Work-in-Process Inventory, an asset, is increased and Manufacturing Overhead is decreased, which increases equity.
17. When a job is completed, Finished Goods Inventory is debited and Work-in-Process Inventory is credited. The effect on the accounting equation is that one asset (Finished Goods Inventory) is increased and another asset (Work-in-Process Inventory) is decreased.
18. One journal entry is required to recognize the revenue earned (sales price) and another journal entry is required to remove the product from inventory when it is shipped to the customer and recognize the expense incurred (cost).

| Date | Accounts and Explanation | Debit | Credit |
| ---: | :--- | ---: | ---: |
|  | Accounts Receivable <br> Sales Revenue <br> Cost of Goods Sold <br> Finished Goods Inventory | XXX | XXX |

19. Underallocated overhead occurs when actual manufacturing overhead costs are more than allocated manufacturing overhead costs. Overallocated overhead occurs when actual manufacturing overhead costs are less than allocated manufacturing costs. This is caused by the fact that overhead is allocated using a predetermined overhead allocation rate that is based on estimates.
20. The overhead is overallocated because the company allocated more than the actual overhead costs. The amount is $\$ 325(\$ 5,575-\$ 5,250)$.
21. 

| Date | Accounts and Explanation | Debit | Credit |
| :--- | :--- | ---: | ---: |
|  | Manufacturing Overhead <br> Cost of Goods Sold | 325 | 325 |

22. Costs are accumulated in various accounts as they are incurred. Direct costs are assigned to individual jobs and recorded on the job cost records. Manufacturing overhead costs (indirect costs) are allocated to individual jobs based on a predetermined overhead allocation rate. The Manufacturing Overhead account is adjusted at the end of the period for the amount of underallocated or overallocated manufacturing overhead.
23. Service companies, like manufacturing companies, work on individual, unique jobs and need to know the cost of the jobs. Knowing the full cost of a job allows for better pricing decisions.
24. Indirect costs are allocated to jobs using the predetermined overhead allocation rate.

## Short Exercises

S-M:2-1
a. A manufacturer of refrigerators
b. A manufacturer of specialty wakeboards

Process
Job Order
c. A manufacturer of luxury yachts
d. A professional services firm
e. A landscape contractor
f. A custom home builder
g. A cell phone manufacturer
h. A manufacturer of frozen pizzas

Job Order
Job Order
Job Order
Job Order
Process
Process
i. A manufacturer of multivitamins

Process
j. A manufacturer of tennis shoes

Process

S-M:2-2

| Date | Accounts and Explanation | Debit | Credit |
| :---: | :--- | ---: | ---: |
|  | Raw Materials Inventory $(\$ 72,000+\$ 1,200)$ | 73,200 | 73,200 |
|  | Accounts Payable | 59,000 |  |
|  | Work-in-Process Inventory <br> Manufacturing Overhead <br> Raw Materials Inventory | 450 | 59,450 |

| Raw Materials Inventory |  |  |  |
| :--- | ---: | ---: | ---: |
| Bal. | 38,000 |  |  |
| Purchased | 73,200 | 59,450 | Used |
| Bal. | 51,750 |  |  |

The ending balance of the Raw Materials Inventory account is $\$ 51,750$.

S-M:2-3

| Total materials used | $(\$ 35+\$ 215-\$ 10)$ | $\$ 240$ |
| :--- | :--- | ---: |
| Direct materials used | $(\$ 25+\$ 280+\$ 150-\$ 505-\$ 40)$ | $\$ 90$ |
| Indirect materials used | $(\$ 240-\$ 90)$ | $\$ 150$ |

S-M:2-4

| Date | Accounts and Explanation | Debit | Credit |
| :---: | :--- | ---: | ---: |
|  | Work-in-Process Inventory | 74,000 |  |
|  | Manufacturing Overhead $(\$ 620+\$ 860)$ | 1,480 |  |
|  | Wages Payable |  | 75,480 |
|  |  |  |  |

## S-M:2-5

Manufacturing Overhead $=\$ 18,000+\$ 5,300+\$ 45,000=\$ 68,300$

| Date | Accounts and Explanation | Debit | Credit |
| :---: | :---: | ---: | ---: |
|  | Manufacturing Overhead <br> Raw Materials Inventory | 18,000 | 18,000 |
|  | Manufacturing Overhead <br> Accumulated Depreciation-Saws <br> Manufacturing Overhead <br> Wages Payable | 5,300 | 5,300 |

These costs are not overhead costs:

- Wood is a direct material
- Depreciation on the delivery truck is a selling and administrative expense (period cost, not a product cost)
- Assembly-line workers' wages are direct labor

S-M:2-6
Direct materials \$ 550
Direct labor 400
Manufacturing overhead (\$400×0.40)
Total cost of Job 303

S-M:2-7

| Predetermined <br> Overhead <br> Allocation Rate | $=\frac{\text { Total estimated overhead cost }}{\text { Total estimated quantity of the overhead allocation base }}$ |

## E-M:2-27

a. Purchased raw materials on account.
b. Used direct and indirect materials in production (requisitioned direct and indirect materials).
c. Incurred and assigned manufacturing wages as direct and indirect labor.
d. Expired insurance on factory plant and/or equipment; accumulated in Manufacturing Overhead.
e. Allocated manufacturing overhead to jobs.
f. Completed jobs (transferred Work-in-Process Inventory to Finished Goods Inventory; Cost of Goods Manufactured).
g. Sold inventory (Cost of Goods Sold).
h. Adjusted underallocated balance of Manufacturing Overhead to Cost of Goods Sold.

## E-M:2-28

a. Requisitioned Raw Materials in the amount of $\$ 19,000$.
b. Direct Materials assigned to Work-in-Process Inventory, $\$ 17,000$.
c. Completed jobs and assigned costs to Finished Goods Inventory, $\$ 37,000$.
d. Cost of jobs sold and shipped (completed jobs), $\$ 24,000$.
e. Labor incurred, $\$ 9,000$ (direct labor assigned to Work-in-Process, $\$ 8,000$; indirect labor accumulated in Manufacturing Overhead, $\$ 1,000$ ).
f. Manufacturing Overhead adjusted for underallocated overhead, $\$ 1,500$.
g. Jobs sold and costs assigned to Cost of Goods Sold, \$24,000.

| Accounts Payable | Wages Payable | Manufacturing Overhead |  | Cost of Goods Sold |  |

| Total Cost | $\underline{\$ 47,775}$ |

|  | Job 722 |
| :--- | ---: |
| Direct Materials | $\$ 2,500$ |
| Direct Labor (\$25 per hour $\times 60$ hours $)$ | 1,500 |
| Manufacturing Overhead $(25 \%$ of direct labor) | 375 <br> Total Cost |
| $\underline{\$ 4,375}$ |  |

## Requirement 3

Piedmont Computer Company assigns costs to jobs to help the company set sales prices that cover all costs and contribute to profit. Assigning costs to individual jobs also can help Piedmont control costs.

## Critical Thinking

## Tying It All Together Case M:2-1 <br> Requirement 1

Direct materials would most likely include items such as steel and cement.

## Requirement 2

Direct costs $=$ Direct materials + Direct labor $=\$ 55 \mathrm{~m}+\$ 30 \mathrm{~m}=\$ 85 \mathrm{~m}$
Indirect costs $=50 \%$ of Direct labor costs $=0.50 \times \$ 30 \mathrm{~m}=\$ 15 \mathrm{~m}$
Total Costs $=$ Direct costs + Indirect costs $=\$ 85 \mathrm{~m}+\$ 15 \mathrm{~m}=\$ 100 \mathrm{~m}$

## Requirement 3

Markup $=20 \%$ of total costs $=0.20 \times \$ 100 \mathrm{~m}=\$ 20 \mathrm{~m}$
Price $=$ Cost + Markup $=\$ 100 \mathrm{~m}+\$ 20 \mathrm{~m}=\$ 120 \mathrm{~m}$

## Requirement 4

Granite Construction must charge customers enough to cover all costs, not just the direct costs, in order to remain profitable. For example, projects such as this require the use of expensive machinery. The maintenance and depreciation costs could be substantial and must be considered when bidding for projects.

## Decision Case M:2-1 <br> Requirement 1

The cost analysis for the second order is correct. The problem tells us that overhead is allocated "based on direct labor cost," and we can see from the first order that the allocation rate is $50 \%$ of direct labor cost. Some students may point out that labor costs have gone up during the year, but overhead costs presumably have not. This situation could result in an overallocation of overhead. However, overallocated or underallocated amounts are adjusted at the end of the year.

Furthermore, all amounts, including both overhead costs and labor costs, were estimated at the beginning of the year to calculate the predetermined overhead allocation rate. Estimates are, by their nature, only "educated guesses." They may very well include "contingency amounts" or "cushions" for unknown factors, and it is expected that actual costs will differ from the amounts estimated.
(Alternatively, it may be pointed out that companies are free to revise their allocation rates at any time if they feel it is warranted.)

## Requirement 2

Hiebert should account for each order as a separate job. The orders were received at different times, for different amounts, and the costs per box of the orders are not the same.

## Requirement 3

Student responses will vary. Answers should make it clear that Hiebert is free to price his products any way he sees fit. He may choose to keep the price per box the same as it was before, and sacrifice a portion of the gross profit in order to keep his sales volume up and maintain customer loyalty. Or, he could "pass along" the cost increases by raising his prices, risking a reduction in sales. Or, he could pick a price strategy somewhere in between these two points. Hiebert will have to consider a number of factors such as supply and demand, current market conditions, competition, and customer relations before deciding on whether to change the price of the product.

## Fraud Case M:2-1 <br> Requirement 1

The company is using direct labor hours as a cost driver to allocate overhead. By showing more hours spent on military jobs, more overhead would be allocated to these jobs over civilian contracts.

## Requirement 2

By shifting costs from other contracts to the government contracts, the company is overcharging the government and violating the contract agreement.

## Requirement 3

Lower costs translate into higher profits. Additionally, the company can place bids lower than its competitors because they have lower costs, thereby increasing their chances of being awarded contracts.
