

Organ Systems Overview

Time Allotment: 1½ hours (rat dissection: 1 hour; if performing reproductive system dissection, ½ hour each for male and female; dissectible human torso model: ½ hour).

Multimedia Resources: See Appendix B for Guide to Multimedia Resource Distributors.

Homeostasis (FHS: 20 minutes, VHS, DVD, 3-year streaming webcast)

Homeostasis: The Body in Balance (HRM: 26 minutes, VHS, DVD)

Organ Systems Working Together (WNS: 14 minutes, VHS)

Practice Anatomy Lab™ 2.0 (PAL) (BC: CD-ROM, Website)

Solutions:

Bleach Solution, 10%

Measure out 100 milliliters of household bleach. Add water to a final volume of 1 liter.

Laboratory Materials

Ordering information is based on a lab size of 24 students, working in groups of 4. A list of supply house addresses appears in Appendix A.

Dissectible human torso model
or cadaver
6–12 forceps
6–12 scissors

6–12 blunt probes
Disposable gloves, soap, and sponges
6–12 freshly killed or preserved rats
Twine or large dissecting pins

6–12 dissecting trays
Lab disinfectant or 10% bleach
solution

Advance Preparation

1. Make arrangements for appropriate storage and disposal of dissection materials. Check with the Department of Health or the Department of Environmental Protection, or their counterparts, for state regulations.
2. Designate a disposal container for organic debris, set up a dishwashing area with hot soapy water and sponges, and provide lab disinfectant such as Wavicide-01 (Carolina) or bleach solution for washing down the lab benches.
3. Set out safety glasses and disposable gloves for dissection of freshly killed animals (to protect students from parasites) and for dissection of preserved animals.
4. Decide on the number of students in each dissecting group (a maximum of four is suggested, two is probably best). Each dissecting group should have a dissecting pan, dissecting pins, scissors, blunt probe, forceps, twine, and a preserved or freshly killed rat.
5. Preserved rats are more convenient to use unless small mammal facilities are available. If live rats are used, they may be killed a half-hour or so prior to the lab by administering an overdose of ether or chloroform. To do this, remove each rat from its cage and hold it firmly by the skin at the back of its neck. Put the rat in a container with cotton soaked in ether or chloroform. Seal the jar tightly and wait until the rat ceases to breathe.
6. Set out dissectible human torso models and a dissected human cadaver if available.

Comments and Pitfalls

1. Students may be overly enthusiastic when using the scalpel and cut away organs they are supposed to locate and identify. Therefore, use scissors to open the body. Have blunt probes available as the major dissecting tool.
 2. Be sure the lab is well ventilated, and encourage students to take fresh air breaks if the preservative fumes are strong. If the dissection animal will be used only once, it can be rinsed to remove most of the excess preservative.
 3. Organic debris may end up in the sinks, clogging the drains. Remind the students to dispose of all dissection materials in the designated container.
 4. Inferior vena cava and aorta may be difficult to distinguish in uninjected specimens.

Answers to Activity Questions

Activity 5: Examining the Human Torso Model (p. 24)

2. From top to bottom, the organs pointed out on the torso model are: *brain, trachea, thyroid gland, lung, heart, diaphragm, liver, stomach, spleen, large intestine, greater omentum, small intestine*

3. Dorsal body cavity: *brain, spinal cord*

Thoracic cavity: *aortic arch, bronchi, descending aorta (thoracic region), esophagus, heart, inferior vena cava, lungs, and trachea*

Abdominopelvic cavity: *adrenal gland, descending aorta (abdominal region), greater omentum, inferior vena cava, kidneys, large intestine, liver, mesentery, pancreas, rectum, small intestine, spleen, stomach, ureters, urinary bladder*

Note: The diaphragm separates the thoracic cavity from the abdominopelvic cavity.

Right Upper Quadrant: *right adrenal gland, right kidney, large and small intestine, liver, mesentery, pancreas, stomach, right ureter*

Left Upper Quadrant: *left adrenal gland, descending aorta, greater omentum, left kidney, large and small intestine, mesentery, pancreas, spleen, stomach, left ureter*

Right Lower Quadrant: *large and small intestine, mesentery, rectum, right ureter, urinary bladder*

Left Lower Quadrant: *descending aorta, greater omentum, large and small intestine, left ureter, urinary bladder*

4. Digestive: *esophagus, liver, stomach, pancreas, small intestine, large intestine (including rectum)*

Urinary: *kidneys, ureters, urinary bladder*

Cardiovascular: *aortic arch, heart, descending aorta, inferior vena cava*

Endocrine: *pancreas, adrenal gland, thyroid gland*

Reproductive: *none*

Respiratory: *lungs, bronchi, trachea*

Lymphatic/Immunity: *spleen*

Nervous: *brain, spinal cord*

NAME _____

LAB TIME/DATE _____

Organ Systems Overview

1. Use the key below to indicate the body systems that perform the following functions for the body. Then, circle the organ systems (in the key) that are present in all subdivisions of the ventral body cavity.

- Key: a. cardiovascular d. integumentary g. nervous j. skeletal
 b. digestive e. lymphatic/immunity h. reproductive k. urinary
 c. endocrine f. muscular i. respiratory

- k; urinary _____ 1. rids the body of nitrogen-containing wastes
c; endocrine _____ 2. is affected by removal of the thyroid gland
j; skeletal _____ 3. provides support and levers on which the muscular system acts
a; cardiovascular _____ 4. includes the heart
c; endocrine (h; reproductive) _____ 5. causes the onset of the menstrual cycle
d; integumentary _____ 6. protects underlying organs from drying out and from mechanical damage
e; lymphatic/immunity _____ 7. protects the body; destroys bacteria and tumor cells
b; digestive _____ 8. breaks down ingested food into its building blocks
i; respiratory _____ 9. removes carbon dioxide from the blood
a; cardiovascular _____ 10. delivers oxygen and nutrients to the tissues
f; muscular _____ 11. moves the limbs; facilitates facial expression
k; urinary _____ 12. conserves body water or eliminates excesses
c; endocrine _____ and h; reproductive _____ 13. facilitate conception and childbearing
c; endocrine _____ 14. controls the body by means of chemical molecules called hormones
d; integumentary _____ 15. is damaged when you cut your finger or get a severe sunburn

2. Using the above key, choose the *organ system* to which each of the following sets of organs or body structures belongs.

- e; lymphatic/immunity _____ 1. thymus, spleen, lymphatic vessels d; integumentary _____ 5. epidermis, dermis, and cutaneous sense organs
j; skeletal _____ 2. bones, cartilages, tendons h; reproductive _____ 6. testis, ductus deferens, urethra
c; endocrine _____ 3. pancreas, pituitary, adrenals b; digestive _____ 7. esophagus, large intestine, rectum
i; respiratory _____ 4. trachea, bronchi, alveoli f; muscular _____ 8. muscles of the thigh, postural muscles

3. Using the key below, place the following organs in their proper body cavity.

Key:

a. abdominopelvic b. cranial c. spinal d. thoracic

a; abdominopelvic 1. stomach a; abdominopelvic 4. liver d; thoracic 7. heart
d; thoracic 2. esophagus c; spinal 5. spinal cord d; thoracic 8. trachea
a; abdominopelvic 3. large intestine a; abdominopelvic 6. urinary bladder a; abdominopelvic 9. rectum

4. Using the organs listed in question 3 above, record, by number, which would be found in the abdominal regions listed below.

3, 6, 9 1. hypogastric region 1, 3, 4 4. epigastric region
3 2. right lumbar region 3 5. left iliac region
3 3. umbilical region 1, 3, 4 6. left hypochondriac region

5. The levels of organization of a living body are chemical, cell, tissue, organ, organ system, and organism.

6. Define organ. A body part (or structure) that is made up of two or more tissue types and performs a specific body function, e.g., the stomach, the kidney

7. Using the terms provided, correctly identify all of the body organs provided with leader lines in the drawings shown below. Then name the organ systems by entering the name of each on the answer blank below each drawing.

Key: blood vessels heart nerves spinal cord urethra
 brain kidney sensory receptor ureter urinary bladder

a. nervous system

b. cardiovascular system

c. urinary system

8. Why is it helpful to study the external and internal structures of the rat? Many of the external and internal structures are similar to those in the human. Studying the rat can help you to understand your own structure.
