## **MULTIPLE CHOICE**

- 1. The goal of the dissertation in the process of scientific education is to demonstrate that the future scientist \_\_\_\_\_.
  - a. has memorized all of the known facts about a given topic
  - b. has read all of the known articles about a given a topic
  - c. can contribute something new to the field
  - d. can apply the technical knowledge learned in graduate school

ANS: C DIF: Moderate

REF: Psychology's Emphasis on Method: Scientific Education and Technical Training OBJ: 2.6 MSC: Remembering

- 2. According to the text, the goal of a scientific education is \_\_\_\_\_
  - a. to question what is known and how to find out what is not yet known
  - b. to convey what is known about a subject so it can be applied in a medical context
  - c. to train individuals to exclusively rely on deductive reasoning to solve problems
  - d. all of the above

ANS: ADIF: EasyREF: Psychology's Emphasis on Method: Scientific Education and Technical TrainingOBJ: 2.6MSC: Understanding

- 3. According to the text, a \_\_\_\_\_ would receive technical training, whereas a \_\_\_\_\_ would receive scientific education.
  - a. pharmacologist; pharmacist
  - b. physician; biologist
  - c. botanist; computer programmer
  - d. research psychologist; clinical psychologist

ANS: B DIF: Moderate

REF: Psychology's Emphasis on Method: Scientific Education and Technical Training OBJ: 2.6 MSC: Applying

4. According to the textbook, there are no perfect \_\_\_\_\_ of personality, only \_\_\_\_\_.
a. measures; devices c. theories; hypotheses
b. indicators; clues d. reliable measures; valid measures

ANS: BDIF: ModerateREF: Personality DataOBJ: 2.1MSC: Remembering

- 5. Researchers must use clues to personality in their research because\_\_\_\_\_
  - a. personality is defined solely by biological factors that cannot be observed
  - b. personality tests are unethical
  - c. personality is something hidden that resides inside an individual
  - d. personality is defined by responses to self-report questionnaires

ANS:	С	DIF:	Moderate	REF:	Personality Data
OBJ:	2.1	MSC:	Understanding	5	

## 6. When gathering data or clues about personality, the best policy is to \_\_\_\_\_

a. gather only a very small number of clues and focus on the important ones

- b. gather only clues that are certain not to be misleading
- c. rely solely on self-report data
- d. collect as many clues as possible

ANS: D	DIF: Easy	REF: Personality Data
OBJ: 2.1	MSC: Applying	

7. Because each kind of data has limitations, personality psychologists should \_\_\_\_\_\_.

- a. not bother collecting data
- b. gather as much data as possible
- c. only use L data, which are the most reliable
- d. use only one source of data and control for its limitations

ANS:	В	DIF:	Easy	REF:	Personality Data
OBJ:	2.1	MSC:	Applying		

There is a possibility that individuals are so accustomed to certain aspects of their personality that they might not be aware of those traits. This is called the \_\_\_\_\_\_ effect.
 a. fish-and-water
 c. self-expectancy

b. self-verification		d.	narcissism
ANS: A OBJ: 2.1	Moderate Remembering		Personality Data: Four Kinds of Clues

9. In order to examine the relationship between early life experiences and adult criminality, Dr. Robbins asks his research participants to fill out questionnaires describing their early life. He then obtains copies of their arrest records from the county courthouse. The questionnaires used in Dr. Robbins's study would be \_\_\_\_\_\_ data, whereas the arrest records would be \_\_\_\_\_\_ data.

a. L; B
b. S; I
c. S; L
d. B; L

ANS: C DIF: Easy REF: Personality Data: Four Kinds of Clues

OBJ: 2.2 MSC: Understanding

10. To assess the personality traits of a group of 5-year-olds, researchers use puppets to illustrate different personality traits. Children are then asked to pick the puppet that best matches their personality. This is an example of \_\_\_\_\_\_ data.
a. S \_\_\_\_\_\_ c. L
b. I \_\_\_\_\_\_ d. B

## MATCHING

Match the most applicable type of data with each piece of information.

a. B data

- b. L data
- c. I data
- d. S data
- e. T data
- f. E data
- 1. Your own responses to the statement, "I consider myself a nervous person"
- 2. A therapist's description of her client
- 3. The number of times someone has been arrested
- 4. Reaction times to photographs
- 5. Father's report on his daughter's talkativeness

5.	ANS: C OBJ: 2.3	DIF: Easy MSC: Applying	REF:	Personality Data: Four Kinds of Clues

Match the most relevant term with each definition.

- a. Reliable
- b. Valid
- c. Generalizable
- d. Measurement error
- e. Aggregation
- f. Precision
- 6. The cumulative effect random influences have on the outcome of interest
- 7. A method or instrument that provides the same information repeatedly
- 8. An instrument actually reflects the construct of interest
- 9. A result applies behind the context of the current study
- 10. Combining many items in a test to eliminate idiosyncrasies of any one item

## SHORT ANSWER

1. Why does Funder believe there are no perfect indicators of personality? What strategies can researchers use to deal with this concern?

ANS: Answers will vary.

DIF: Moderate REF: Personality Data OBJ: 2.1 MSC: Evaluating

2. Explain why Funder considers answers to the items on the Minnesota Multiphasic Personality Inventory (MMPI) to be an example of B data.

ANS: Answers will vary.

DIF:DifficultREF:Personality Data: Four Kinds of CluesOBJ:2.3MSC:Understanding

3. Consider the construct of delay of gratification. Explain how you could obtain S, I, B, and L data for measuring delay of gratification. Identify and describe one advantage and one disadvantage for each of your examples of S, I, B, and L data.

ANS: Answers will vary.

DIF:	Moderate	REF:	Personality Data: Four Kinds of Clues
OBJ:	2.3   2.4	MSC:	Applying

4. What is face validity, and how does it apply to S and B data? What is a limitation of face validity for evaluating the quality of B data? Do you think this concern also applies to S data?

ANS: Answers will vary.

DIF:DifficultREF:Personality Data: Four Kinds of CluesOBJ:2.4MSC:Evaluating

5. Consider the trait of courage. Describe the advantages and limitations of obtaining informant report data for this trait.

ANS: Answers will vary.

DIF:ModerateREF:Personality Data: Four Kinds of CluesOBJ:2.4MSC:Evaluating

6. Why would you recommend aggregation to a researcher interested in measuring shyness? Explain why aggregation improves the reliability of psychological assessments such as measures of shyness.

ANS: Answers will vary.

DIF:ModerateREF:Personality Data: Quality of Data: ReliabilityOBJ:2.7 | 2.8MSC:Applying

7. Consider the construct of intelligence. What steps would researchers do to validate measures of this construct? Why is validity harder to establish and evaluate than reliability?

ANS: Answers will vary.

DIF:DifficultREF:Personality Data: Quality of Data: ValidityOBJ:2.7 | 2.8MSC:Applying

8. Recently, a group of researchers raised concerns about the use of so-called WEIRD participants in the majority of psychological studies. Who are WEIRD participants? Why is this issue a potential concern to psychological researchers (e.g., do WEIRD participants hurt reliability)? What steps can be taken to address the concerns about WEIRD participants?

ANS: Answers will vary.

DIF: Difficult REF: Personality Data: Quality of Data: Generalizability OBJ: 2.7 | 2.8 | 2.9 MSC: Evaluating

9. What is generalizability? What are the facets of generalizability described in the book, and how does each one relate to the broad idea of generalizability?

ANS: Answers will vary.

DIF:	Moderate	REF:	Personality Data: Quality of Data: Generalizability
OBJ:	2.9	MSC:	Understanding
