# ATI COMPREHENSIVE HESI A2 FOR ANATOMY AND

# PHYSIOLOGY | REAL EXAMS

1. Anatomic position

The body is erect, the feet are slightly apart, the head is held high, and the

palms ofthe hands are facing forward

2. Which of the following is a structure found in the upper

respiratory?Pharynx

3. A person who has damage to their ulnar nerve will have decreases

sensation in<mark>Arm</mark>

4. Which bone dose not articulate with any other

bone?<mark>Hyoid</mark>

5. Which of the following statements best describe endocrine

glands?They secrete chemicals into the blood

6. Diet is important because bone are storage

places for Calcium and phosphorous

7. Which organ is part of both the male reproductive system and the urinary

system?Urethra

8. Red blood cell production is known as which of the following?

A. Hematopoie

sis<mark>B.</mark>

**Erythropoiesis** 

- C. Phagocytosis
- D. Thrombopoiesis
- 9. When an individual is under stress, hormones are released. Which of the following is notone of the locations in which hormones are released when under stress?
  - A. Parathyroid
  - B. Adrenal cortex
  - C. Posterior pituitary
  - D. Hypothalamus

10. The central nervous system is made up of all except which of the following?

A. Brai n<mark>B.</mark> Heart C. Retina

D. Spinal cord

11. The thyrotrophic-releasing growth hormone-releasing, and gonadotropin-

releasinghormones are released by which of the following endocrine

system glands?

A. Thymus

B. Pituitary gland

C. Pineal gland

D. Hypothalamus

12. What is the most visible part of the

ear?<mark>A. Pinna</mark>

- B. Organ of Corti
- C. Cochlea
- D. Ear canal
- 13. Which of the following is an organ of the respiratory system?

A. Brain

<mark>B. Larynx</mark>

C. Urethra

D. Pancreas

14. The motor cortex helps the brain by monitoring and controlling the body's

movement. Where is the motor cortex located within the brain?

- A. Top, middle portion of the parietal lobe.
- B. Back of the head
- C. Front portion of the parietal lobe.
- D. Around the auditory cortex
- 15. The heart contains four chambers. Which of these four chambers is the

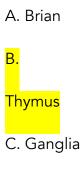

largest and thestrongest?

- A. Left ventricle
- B. Left atrium
- C. Right ventricle
- D. Right atrium

16. Which of the following organs is involved with the immune system?

A. Heart B. Bronchi C. Appendix D. Esophagus

17. Which of the following is not a principal organ of the nervous system?

D. Spinal cord

18. Where do the endocrine system and the nervous system meet?

A. At the pituitary gland and the pineal

gland<mark>B. At the hypothalamus and</mark>

<mark>pituitary gland</mark>

C. At the pineal gland

D. At the thyroid gland

19. The pancreas is an endocrine system gland mainly responsible for

which of thefollowing?

- A. Proper bone development
- B. Metabolism control
- C. Maintaining healthy sugar levels
- D. Distribution of stored fat.

20. The stomach lining membrane name?

The mucous membrane of the stomach contains simple columnar epithelium tissue

with manyexocrine cells.

21. skin aids in maintaining the calcium and phophate levels of the body by

participating in he production of which of the following

<mark>vitamin d</mark>

22. all action of the nervous system depend on the transmission of nerve impulses

over which of the following?

#### neurons

23. which hormone initiates the preparation of the endometrium of the uterus for

pregnancy<mark>estrogen</mark>

24. which female reproductive organ's produce oocytes, estrogen and

progesterone ovaries

25. the buttocks is on which surface the

body<mark>dorsal</mark>

26. the esophagus is located at which body

cavity<mark>thoracic</mark>

27. which is a hollow

organ<mark>gallbladder</mark>

28. which muscle is included in the quadriceps femoris

group<mark>vastus lateralis</mark>

29. what occur when the sympathetic nervous system is

stimulated?<mark>cardiac output</mark>

30. which hormone is produce by the posterior pituitary

gland<mark>oxytocin</mark>

31. which structure regulat the transport of substance in and out

of a cell<mark>the cellular membrane</mark>

32. a person who damages to their ulnar nerve will have decrease sesutior in

which area<mark>arm</mark>

33. when assessing a female client who describes herself as a vegetarian in the

nurse notes that she has an unusual skin color. The nurse should ask the client

if she has eaten largeamount of:

### carrot and squash

34. which structure produces B-lymphocytes

Red bone marrow

35. how many days is the avarage menstrul cycle

36. where in the human body are nutrients absorbed

small intestines

37. The central nervous system is made up of all except which of the

following?heart

38. The motor cortex helps the brain by monitoring and controlling the body's

movement. Where is the motor cortex located within the brain?

top, the middle portion of the parietal lobe.

39. The heart contains four chambers. Which of these four chambers is the

largest and thestrongest?

Left ventricle

# <mark>appendix</mark>

40. Which of the following is not a principal organ of the nervous

system?<mark>thymus</mark>

41. The pancreas is an endocrine system gland mainly responsible for

which of the following?

maintain healthy blood sugar level

42. Tough elastic tissues found in the joints that connect bones to bones

are called:<mark>ligament</mark>

43. What mineral is responsible for muscle

contractions?calcium

44. Where can the urinary bladder and internal reproductive organs

be found?pelvic cavity

45. Nerve tissue is composed of neurons and connective tissue cells that are

referred to aswhich of the following?

<mark>neuroglia</mark>

46. Which tissue serves as the framework of the body by providing support and

structure forthe organs?

<mark>connective tissue</mark>

47. What are the glands of skin that produce a thin, watery

secretion<mark>eccrine glands</mark>

48. You have been given a sample of tissue that has open spaces partially

filled by anassemblage of needle like structures. What is this tissue?

<mark>spongy bone</mark>

49. Which mineral is responsible for regulating fluid in the

body?<mark>sodium</mark>

50. Motor or \_\_\_\_\_\_ neurons transmit nerve impulses away from the

CNS.<mark>efferent</mark>

51. What are chemical messengers that control growth, differentiation, and the

metabolism of specific target cells called?

<mark>hormones</mark>

52. Which blood vessel where exchanges take place between blood and the cells of

the body?<mark>capillary</mark>

53. The stomach muscle churns and mixes food, turning the mass into a soupy

substancecalled what?

<mark>chyme</mark>

54. All the nutrients that enter the hepatic portal vein are routed where for

decontamination?liver

55. In men, spermatozoa develop within the\_of each

testis<mark>Seminiferous tubules</mark>

56. During pregnancy, what organ produces the hormones that maintain the

endometrium and prepare the breasts for milk production?

placenta

57. Gland whose secretion is oily- a mixture of oily substances and cell

fragments<mark>sabasious</mark>

58. Sweat gland whose secretion is s primarily water and salts plus contains protein

and fattysubsatances

#### apocrine

59. Smooth muscle structure in the

skin<mark>arrrector pilli</mark>

60. What type of joint is the

# elbow<mark>hinge</mark>

61. What type of joint is the hip and

shoulderball and socket

62. what are the two most abundant minerals stored in bones

extracellular matrixcalcium and phosphate

63. The most abundant glial cells found in the CNS that anchor neurons to

capillaries and help control the environment around neurons

<mark>astrocytes</mark>

64. What does the adrenal medulla

secrete?Epinephrine and

norepinephrine

65. Which skin cancer is the most dangerous?

malignantmelanoma

-becaus it matastisizes(spreads)

-Cancer of the melanocytes

66. Which skin cancer is moderatly

dangerous?squamous cell carcinom

-arises from keratinocytes of stratum spinosum

67. Which skin cancer is least

dangerous?basal cell carcinoma

-doesnt spread

68. What is the only artery in the body to carry oxygen-poor

blood?pulmonary artery

69. Chocolate cysts of the ovaries are attributed to\_\_\_\_\_

.<mark>endometriosis</mark>

70. tendons

connect<mark>muscle to</mark>

#### bone

71. Where is interstitial fluid found in the

body?<mark>in the tissues around cells</mark>

72. Which lobe of the brain is associated with judgement, planning, impulse

control, and social behavior?

<mark>frontal</mark>

73. What does lipase do?

It breaks down fats into fatty acids and glycerol.

74. In what area of the body would you expect to find and especially thick stratum

corneum?Heel of the foot

75. What two things must be present for a muscle cell to

contract?Calcium & adenosine triphosphate (ATP)

76. the esophagus is located at which body cavity

a) ventral

b) abdomin

al<mark>c)</mark>

#### thoracic

77. What is the response of CF cell in the collecting tubules in the nephrons when

antiduretichormone (ADH) is secreted?

Water is reabsorbed from the urinary filtration?

78. what is the function of ADH hormone

Regulate water balance in the body by controlling the amount of water the kidneys

<mark>reabsorb</mark>

79. which muscle is included in tue quadriceps femoris group

### a) trapezius

- b) vastuslateralis
- c) gastrocnemious
- d) rectus abdominus
- 80. the calcaneous is located in whih part of the

bodythe leg

81. Where is the tympanic membrane

located? external auditorium canal and

<mark>tympanic cavity</mark>

82. Fats are broken down in the small intestine using which enzyme(s)?

Fats also known as lipids are broken down using lipase produced by the

pancreas and bileproduced by the liver but transferred to the small intestine

through the bile duct.

83. What is the only artery to carry oxygen-poor

blood?Pulmonic Artery

84. What do ligaments

connect?Bone to Bone

85. Is epithelial tissue vascular or

avascular?Avascular

## 86. Which of the following describes the primary function of the respiratory

system?

B) to take oxygen into the body while removing carbon dioxide

C) to transport nutrients to the cells and tissue of the body

D) to act as a barrier between the body's organs and outside influences

# 87. Which of the following is the first step of the scientific method?

A) construct a hypothesis

B) make observations

C) analyze data

D) form a question

88. The process of organisms with an advantageous trait surviving more often and producingmore offspring than organisms without the advantageous trait describes which of the following basic mechanisms?

A) gene flow

B) genetic drift

C) mutation

89. Which of the following is the group of basophils that produces follicle-

stimulatinghormone (FSH) and luteinizing hormone?

A) <mark>gonadotrophs</mark>

B) thyotroph

C) chromophil

D) pituicytes

90. Which of the following are considered the basic units of the female

reproductive system, each containing a single immature egg cell that is released

during ovulation?

A) oocytes

B) <mark>follicles</mark>

C) ovaries

D) fundus

91. Which of the following describes the muscular organ that processes food

material into increasingly smaller pieces, mixes it with saliva to create a bolus,

and creates a barrier totransport food into the esophagus?

A) pharynx

- B) <mark>tongue</mark> C) diaphragm
- D) stomach
- 92. Which of the following chambers of the heart receives blood returning from

the lungsduring pulmonary circulation?

A) <mark>left atrium</mark>

- B) right atrium
- C) left ventricle
- D) right ventricle
- 93. Which of the following is the lobe in the cerebral cortex primarily

responsible for processing and integrating sensory information received

from the rest of the body?

A) frontal lobe

B) occipital lobe

C) parietal lobe

94. Which of the following is an example of adaptive, or specific, immunity?

A) inflammation

B) fever

C) <mark>humoral</mark>

D) phagocytosis

95. Which of the following describes a situation in which research results are consistent withevery subsequent experiment, but the test used in the experiment does not measure what it claims to measure?

A) <mark>reliable, but not valid</mark>

B) valid, but not reliable

C) neither reliable or valid

D) both reliable and valid

96. Which of the following Mendellian laws describes how pairs of alleles within genesseparate and recombine separately from other genes?

A) law of segregation

B) law of dominance

C) law of independent assortment

D) law of predictive traits

97. Which of the following describes how atomic radius varies across the periodic

table?

A) atomic radius increases from top to bottom and left to right on the periodic

table

B) atomic radius increases from top to bottom and right to left on the periodic table

C) atomic radius increases from top to bottom and toward the halogens on

the periodictable

D) atomic radius increases from top to bottom and toward the noble gases on

the periodictable

98. Which of the following is NOT a tissue layer found in skeletal bones?

A) periosteum

B) bone marrow

C) <mark>enamel</mark>

D) cancellous bone

99. Which of the following sets of valves is primarily responsible for preventing

blood flowfrom major blood vessels to the heart?

- A) atrioventricular valves
- B) semilunar valves
- C) tricuspid valves
- D) bicuspid valves

100. Bone is composed primarily of which of the following inorganic materials?

- A) <mark>calcium</mark> B) magnesium
- C) collagen
- D) potassium

101. Which of the following is the primary physical barrier the body uses to

preventinfection

- A) mucus membranes
- B) stomach acid

C) <mark>skin</mark>

D) urine

102. Which of the following is the connective area where nerve impulses send

neurotransmitters across a synapse to a muscle cell to stimulate muscle

contraction?

- A) sarcomere
- B) tendon
- C) nicotinic receptors

D) neuromuscular junctions
