## BRIEF EXERCISES

### BE. 2-134—Qualitative Characteristics.

Accounting information provides useful information about business transactions and events. Those who provide and use financial reports must often select and evaluate accounting alternatives. The FASB statement on qualitative characteristics of accounting information examines the characteristics of accounting information that make it useful for decision-making. It also points out that various limitations inherent in the measurement and reporting process may necessitate trade-offs or sacrifices among the characteristics of useful information.

Instructions.

- (a) Describe briefly the following characteristics of useful accounting information.
- |                             |                   |
|-----------------------------|-------------------|
| (1) Relevance               | (4) Comparability |
| (2) Faithful representation | (5) Consistency   |
| (3) Understandability       |                   |
- (b) For each of the following pairs of information characteristics, give an example of a situation in which one of the characteristics may be sacrificed in return for a gain in the other.
- |  |                                      |
|--|--------------------------------------|
| (1) Relevance and faithful representation. | (3) Comparability and consistency.   |
| (2) Relevance and consistency.             | (4) Relevance and understandability. |
- (c) What criterion should be used to evaluate trade-offs between information characteristics?

Ans: NA, LO: 3, 7, Bloom: C, Difficulty: Difficult, Min: 15-20, AACSB: None, AICPA BB: None, AICPA FN: Reporting, AICPA PC: Communication, IMA: Reporting, IFRS: None

**Solution 2-134.**

- (a) (1) Relevance is one of the two fundamental qualities of useful accounting information. Relevant information is capable of making a difference in a decision. Relevant information helps users to make predictions about the outcomes of past, present, and future events, or to confirm or correct prior expectations. Materiality is a company-specific aspect of relevance.
- (2) Faithful representation is one of the two fundamental qualities of useful accounting information. Reliable information can be depended upon to represent the conditions and events that it is intended to represent. Representational faithfulness is correspondence or agreement between accounting information and the economic phenomena it is intended to represent stemming from completeness, neutrality, and free from error.
- (3) Understandability is an enhancing quality of information. Information is understandable when it permits reasonably informed users to perceive its significance. Understandability is a link between users, who vary widely in their capacity to comprehend or utilize the information, and the fundamental qualities of information.
- (4) Comparability means that information about companies has been prepared and presented in a similar manner. Comparability enhances comparisons between information about two different companies at a particular point in time.
- (5) Consistency means that unchanging policies and procedures have been used by a company from one period to another. Consistency enhances comparisons between information about the same company at two different points in time.
- (b) (**Note to instructor:** There are a multitude of answers possible here. The suggestions below are intended to serve as examples).
- (1) Forecasts of future operating results and projections of future cash flows may be highly relevant to some decision makers. However, they would not be as free from error as historical cost information about past transactions.
- (2) Proposed new accounting methods may be more relevant to many decision makers than existing methods. However, if adopted, they would impair consistency and make trend comparisons of an enterprise's results over time difficult or impossible.
- (3) There presently exists much diversity among acceptable accounting methods and procedures. In order to facilitate comparability between enterprises, the use of only one accepted accounting method for a particular type of transaction could be required. However, consistency would be impaired for those firms changing to the new required methods.
- (4) Occasionally, relevant information is exceedingly complex. Judgment is required in determining the optimum trade-off between relevance and understandability. Information about the impact of general and specific price changes may be highly relevant but not understandable by all users.
- (c) Although trade-offs result in the sacrifice of some desirable quality of information, the overall result should be information that is more useful for decision making.

**BE. 2-136**—Accounting concepts—identification.

Presented below are a number of accounting procedures and practices at Ramirez Corp. For each of these items, list the assumption, principle, quality, or modifying convention that is violated.

1. Because the company's income is low this year, a switch from accelerated depreciation to straight-line depreciation is made this year.
2. The president of Ramirez Corp. believes it is foolish to report financial information on a yearly basis. Instead, the president believes that financial information should be disclosed only when significant new information is available related to the company's operations.
3. Ramirez Corp. decides to establish a large loss and related liability this year because of the possibility that it may lose a pending patent infringement lawsuit. The possibility of loss is considered remote by its attorneys.
4. An officer of Ramirez Corp. purchased a new home computer for personal use with company money, charging miscellaneous expense.
5. A machine, that cost \$40,000, is reported at its current market value of \$45,000.

**Ex. 2-139**—Basic assumptions.

Briefly explain the four basic assumptions that underlie financial accounting.

Ans: NA, LO: 5, Bloom: K, Difficulty: Easy, Min: 8, AACSB: None, AICPA BB: None, AICPA FC: Measurement, AICPA PC: Communication, IMA: FSA, IFRS: None

**Solution 2-139**

1. The economic entity assumption states that economic activity can be identified with a particular unit of accountability.
2. The going concern assumption assumes that a company will have a long life.
3. The monetary unit assumption means that money is the common denominator of economic activity and provides an appropriate basis for accounting measurement and analysis. In addition, the monetary unit remains reasonably stable.
4. The periodicity assumption implies that a company can divide its economic activities into artificial time periods.

**Ex. 2-140—Historical cost principle.**

Cost as a basis of accounting for assets has been severely criticized. What defense can you build for cost as the basis for financial accounting?

Ans: NA, LO: 6, Bloom: E, Difficulty: Moderate, Min: 5-10, AACSB: Reflective Thinking, AICPA BB: Crit. Think., AICPA FN: Measurement, AICPA PC: Problem Solving and Decision Making, IMA: Reporting, IFRS: None

**Solution 2-140**

Cost is definite and verifiable and not a matter for conjecture or opinion. Once established, cost is fixed as long as the asset remains the property of the party that incurred the cost. Cost is based on fact; that is, it is the result of an arm's length transaction. Cost is also measurable or determinable. Over the years, accountants have found cost to be the most practical basis for record keeping. Financial statements prepared on a cost basis provide business enterprise information having a common, accepted basis from which each reader can make inferences, comparisons, and analyses.

**Ex. 2-141—Expense recognition (matching) concept.**

A concept is a group of related ideas. Matching could be considered a concept because it includes ideas related to expense recognition. Briefly explain the ideas in expense recognition.

Ans: NA, LO: 6, Bloom: C, Difficulty: Moderate, Min: 10, AACSB: None, AICPA BB: None, AICPA FN: Measurement, AICPA PC: Communication, IMA: FSA, IFRS: None

**Solution 2-141**

The ideas in expense recognition include "expense" and "matching":

1. Expenses are outflows of net assets during a period from delivering or producing goods or services or other activities that are the major operations of the entity.
2. Expenses are recognized when the goods or services (efforts) make their contribution to revenue.

The expense recognition principle is that expenses are matched with revenues. Expenses are matched three ways:

1. When there is an association with revenue, expenses are matched with revenues in the period the revenues are recognized.
2. When no association with revenue is evident, expenses are allocated on some systematic and rational basis.
3. When no association with revenue is evident and no future benefits are expected, expenses are recognized immediately.

**Short Answer:**

14. What two assumptions are central to the IASB conceptual framework?

The IASB framework makes two assumptions. One assumption is that financial statements are prepared on an accrual basis; the other is that the reporting entity is a going concern. The FASB discuss accrual accounting extensively but does not identify it as an assumption. The going concern concept is only briefly discussed. The going concern concept will undoubtedly be debated as to its place in the conceptual framework.
