CHAPTER LEARNING OBJECTIVES

- Describe cost systems and the flow of costs in job order system.** Cost accounting involves the procedures for measuring, recording, and reporting product costs. From the data accumulated, companies determine the total cost and the unit cost of each product. The two basic types of cost accounting systems are process cost and job order cost. In job order costing, companies first accumulate manufacturing costs in three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. They then assign the accumulated costs to Work in Process Inventory and eventually to Finished Goods Inventory and Cost of Goods Sold.
- Use a job cost sheet to assign costs to work in process.** A job cost sheet is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job. Job cost sheets constitute the subsidiary ledger for the Work in Process Inventory control account.
- Demonstrate how to determine and use the predetermined overhead rate.** The predetermined overhead rate is based on the relationship between estimated annual overhead costs and estimated annual operating activity. This is expressed in terms of a common activity base, such as direct labor cost. Companies use this rate to assign overhead costs to work in process and to specific jobs.

2 - 4 Test Bank for Managerial Accounting, Eighth Edition

- 4. Prepare entries for manufacturing and service jobs completed and sold.** When jobs are completed, companies debit the cost to Finished Goods Inventory and credit it to Work in Process Inventory. When a job is sold the entries are: (a) Debit Cash or Accounts Receivable and credit Sales Revenue for the selling price, and (b) Debit Cost of Goods Sold and credit Finished Goods Inventory for the cost of the goods.
- 5. Distinguish between under- or overapplied manufacturing overhead.** Underapplied manufacturing overhead indicates that the overhead assigned to work in process is less than the overhead incurred. Overapplied overhead indicates that the overhead assigned to work in process is greater than the overhead incurred.

Solution: $\$700,000 \div 70\% = \$1,000,000$; $\$750,000 + \$1,000,000 + \$700,000 = \$2,450,000$

labor cost. Actual production required an overhead cost of \$295,000, \$570,000 in materials used, and \$220,000 in labor. All of the goods were completed. What amount was transferred to Finished Goods?

- a. \$1,090,000

Ans: B, LO: 4, Bloom: AP, Difficulty: Medium, Min: 3, AACSB: Analytic, AICPA BB: Legal/Regulatory Perspective, AICPA FN: Measurement, AICPA PC: Problem Solving, IMA: FSA

Solution: $\$300,000 \div \$200,000 = 150\%$; $\$570,000 + \$220,000 + (\$220,000 \times 150\%) = \$1,120,000$

Actual production required an overhead cost of \$295,000, \$570,000 in materials used, and \$220,000 in labor. All of the goods were completed. How much is the amount of over- or underapplied overhead?

Graham Manufacturing is a small manufacturer that uses machine-hours as its activity base for assigned overhead costs to jobs. The company estimated the following amounts for 2019 for the company and for Job 62:

| | <u>Company</u> | <u>Job 62</u> |
|------------------------------|----------------|---------------|
| Direct materials | \$60,000 | \$4,500 |
| Direct labor | \$25,000 | \$2,500 |

| Machine hours | 90,000 | 1,350 |

During 2019, the actual machine-hours totaled 95,000, and actual overhead costs were \$71,000.

Ex. 174 (Cont.)**Instructions**

- Compute the predetermined overhead rate.
- Compute the total manufacturing costs for Job 62.
- How much overhead is over or underapplied for the year for the company? State amount and whether it is over- or underapplied.
- If Graham Manufacturing sells Job 62 for \$14,000, compute the gross profit.

Ans: N/A, LO: 1,2,5, Bloom: AP, Difficulty: Medium, Min: 7, AACSB: Analytic, AICPA BB: Legal/Regulatory Perspective, AICPA FN: Measurement, AICPA PC: Problem Solving, IMA: Business Economics

Solution 174 (7–9 min.)

- $\$72,000 \div 90,000 = \0.80 per machine hour
- $\$4,500 + \$2,500 + (\$0.80 \times 1,350) = \$8,080$
- Actual – Applied = Over/Underapplied
 $\$71,000 - (\$0.80 \times 95,000) = \$5,000$ overapplied
- $\$14,000 - \$8,080$ (from (b) above) = $\$5,920$

5. Assuming Job 211 is the only unfinished job at July 31, what is the balance in Work in Process Inventory on this date?

(b) Journalize the summary entries to record the assignment of costs to the jobs in July.

2 - 56 Test Bank for Managerial Accounting, Eighth Edition

Solution 177 (15–20 min.)

(a) 1. Job 210 — \$9,000 + \$8,000 + \$12,000 = \$29,000
 Job 211 — \$5,000 + \$6,000 + \$9,000 = 20,000

2. Manufacturing overhead rate = 150% of direct labor cost (\$12,000 ÷ \$8,000 or \$9,000 ÷ \$6,000)

3. July overhead rate = 150% × 120% = 180%

Klinger Company estimates that annual manufacturing overhead costs will be \$4,800,000 for 2019. The actual overhead costs at the end of 2019 are \$4,980,000. Activity base information for 2019 follows:

| <u>Activity Base</u> | <u>Estimated</u> | <u>Actual</u> |
|----------------------|------------------|---------------|
| Direct Labor Cost | \$3,000,000 | \$3,150,000 |
| Direct Labor Hours | 200,000 | 212,000 |

Solution 186 (12–16 min.)

- (a)
- Predetermined overhead rate as a % of direct labor cost:

$$\$4,800,000 \div \$3,000,000 = 160\%$$

Predetermined overhead rate per hour of direct labor:

$$\$4,800,000 \div 200,000 = \$24 \text{ per hour}$$

Predetermined overhead rate per machine hour used:

$$\$4,800,000 \div 150,000 = \$32 \text{ per machine hour}$$

- (b)
- Overhead applied as a % of direct labor cost:

$$\$3,150,000 \times 1.60 = \$5,040,000$$

Overhead applied per hour of direct labor:

$$212,000 \times \$24 = \$5,088,000$$

Overhead applied per machine hour used:

$$152,000 \times \$32 = \$4,864,000$$

- (c)
- Over- or Underapplied Overhead

$$(\$5,040,000 - \$4,980,000 = \$60,000 \text{ Overapplied})$$

$$(\$5,088,000 - \$4,980,000 = \$108,000 \text{ Overapplied})$$

$$(\$4,864,000 - \$4,980,000 = \$116,000 \text{ Underapplied})$$

SHORT-ANSWER ESSAY QUESTIONS

S-A E 200

(a) Distinguish between the two types of cost accounting systems. (b) May a company use both types of cost accounting systems?

Ans: N/A, LO: 1, Bloom: S, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Industry/Sector Perspective, AICPA FN: Reporting, AICPA PC: Communications, IMA: Business Applications

Solution 200

- (a) The two principal types of cost accounting systems are; (1) job order costing and (2) process costing. Under a job order cost system, costs are assigned to each job or batch of goods; at all times each job or batch of goods can be separately identified. A job order cost system measures costs for each completed job, rather than for set time periods. Under a process cost system, product-related costs are accumulated by or assigned to departments or processes for a set period of time. Job order costing lends itself to specific, special-order manufacturing or servicing while process costing is better suited to similar, large-volume products and continuous process manufacturing.
- (b) A company may use both types of systems. For example, General Motors uses process costing for standard model cars and job order costing for custom-made vehicles.

S-A E 201

A job order cost accounting system is fully integrated into the general ledger of a company. Identify the major general ledger accounts used in a job order cost system. Explain how manufacturing costs flow through these accounts so that inventories may be costed and income determined when goods are sold.

Ans: N/A, LO: 1, Bloom: S, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Legal/Regulatory Perspective, AICPA FN: Reporting, AICPA PC: Communications, IMA: Business Economics

Solution 201

When a job order cost accounting system is fully integrated into the general ledger of a company, the major general ledger accounts used are Raw Materials Inventory, Factory Labor, Manufacturing Overhead, Work in Process Inventory, and Finished Goods Inventory. As manufacturing costs are incurred, they are debited to the Raw Materials Inventory, Factory Labor, and Manufacturing Overhead accounts. As materials are used, labor is assigned, or overhead is applied, the costs are taken out of these accounts and debited to Work in Process Inventory. When jobs are finished, the costs flow from the Work in Process Inventory account to the Finished Goods Inventory account, and when jobs are sold, the costs are transferred to Cost of Goods Sold from Finished Goods Inventory.

S-A E 202

Manufacturing overhead items are indirect product costs that cannot be traced to individual products. Explain how manufacturing overhead costs are accumulated and how they are assigned to products in a job order cost system.

Ans: N/A, LO: 3, Bloom: S, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Legal/Regulatory Perspective, AICPA FN: Measurement, AICPA PC: Communications, IMA: Business Economics

Solution 202

As manufacturing overhead costs are incurred, they are debited to the Manufacturing Overhead account. As jobs move through the factory, manufacturing overhead costs are applied to specific jobs using the predetermined overhead rate. This rate is computed prior to the beginning of the year by dividing estimated annual overhead costs by expected annual operating activity (generally expressed as direct labor hours, direct labor cost, or machine hours). The overhead is applied by determining how much activity was expended on a particular job (for example, direct labor hours), and applying the rate to that activity.

S-A E 203

Mike Hilyer is confused about under and overapplied manufacturing overhead. Define the terms for Mike and indicate the balance in the manufacturing overhead account applicable to each term.

Ans: N/A, LO: 3, Bloom: S, Difficulty: Easy, Min: 5, AACSB: Ethics, AICPA BB: Legal/Regulatory Perspective, AICPA FN: Reporting, AICPA PC: Communications, IMA: Business Economics

Solution 203

Underapplied overhead means that the overhead assigned to work in process is less than the overhead incurred. Overapplied overhead means that the overhead assigned to work in process is greater than the overhead incurred. Manufacturing overhead will have a debit balance when overhead is underapplied and a credit balance when overhead is overapplied.

S-A E 204 (Ethics)

People Carrier Systems, Inc. (PCS) modifies vans that seat 15–20 people by adding additional safety features or wheelchair ramps. Most of its customers are cities and counties, who use the vans to transport school children, the elderly, or the handicapped. The company has specialized in a no-frills approach, emphasizing safety, high quality, and low cost. The company's president was quoted as saying, "Let the other guys make a van pretty. We get people where they need to go—faster, better, and cheaper than anybody else."

The company obtains jobs by being the lowest bidder in a sealed bidding process. Recently, the company was solicited by a top-10 college to submit a bid for a van to be used by its athletic team. Some specialized items were required, such as the school's logo on the outside of the van, and the vinyl seats had to be covered in school colors. The company submitted a bid, and was very surprised to obtain it.

When the job was being prepared, the job manager pointed out that several extra costs could result in this job showing a loss. The boss, an ardent supporter of sports in general and this team in particular, told the manager to just record the standard labor and overhead cost for this job. He says that they could use the preset rate for specialized jobs, and increase the overhead application rate (used in submitting bids) by 5% for future routine jobs. "After all," he says, "nobody else comes close to our price anyway. This could start a whole new line of business for us."

Required:

1. Who are the stakeholders in the decision to increase overhead for routine jobs?
2. Is the decision to subsidize special jobs by increasing the overhead rate on routine jobs ethical? Briefly explain.

Ans: N/A, LO: 2, Bloom: S, Difficulty: Easy, Min: 5, AACSB: Ethics, AICPA BB: Legal/Regulatory Perspective, AICPA FN: Reporting, AICPA PC: Communications, IMA: Business Economics

Solution 204

1. The stakeholders include:
 - The employees and managers of PCS
 - Customers who purchase standard vans
 - Customers who purchase sports vans
 - Shareholders of PCS

2. The decision could be considered ethical, if the company clearly understands that it is allowing the customers of the standard vans to cover some of the costs of the specialty ones. This might not be a bad decision, especially if the specialty business is only a small fraction of the total business.

The company might be compromising its own best interests, however, if it arbitrarily damages relationships with existing customers in order to gain others. It seems undeniable that established customers are preferable to untested ones. While probably ethical, the decision may not be a good one.

S-A E 205 (Communication)

Bridal Treasures, Inc. makes customized wedding gowns. The customer selects a pattern for the basic gown, and then selects fabric and trim. Once the design and the materials have been agreed upon, a Statement of Estimated Cost is signed by the company and by the customer.

Overhead is applied based on the number of days a gown is in process. Usually, five gowns are being worked on at a time. Therefore, each gown is charged 1/5 of a daily estimated overhead amount.

Customer Mary Landon's wedding dress took four days to complete. However, after the first three days had elapsed, Hanna Hunt, a movie personality, suddenly decided to get married, and ordered a very lavish gown. All other work was suspended, and the work on Ms. Landon's dress was delayed six days. The final day of its construction was on the tenth day after it had been begun.

Required:

You are the accounting manager for Bridal Treasures. Write a memo to the billing department. Instruct them as to the appropriate number of overhead days to charge to Ms. Landon's account.

Ans: N/A, LO: 3, Bloom: S, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Legal/Regulatory Perspective, AICPA FN: None, AICPA PC: Communications, IMA: Business Economics

Solution 205

TO: Billing Department

FROM: M. Long, Accounting Manager

RE: Overhead billing, Landon account

As you know, our standard procedure in billing overhead is to simply multiply our daily overhead rate by the number of days the gown was in our possession. However, for the Landon gown, and any other jobs we suspended for the Hanna Hunt gown, we should not charge for the days the gowns were in our possession but not being worked on.

We should adjust the billing for the Hanna Hunt gown, so that it absorbs the full daily cost of overhead, since it actually was the only job worked on during those six days. The Landon job should be charged only four days of overhead. Other suspended jobs should be treated similarly.

Please call if you have questions.
