| | c) Good Cop/Bad Cop | D) Bogey | | | |
| | Answer: B | , , | | | |
| ESSAY. | Write your answer in the space provided or on a s | eparate sheet of paper. | | | |
| 8 | Define distributive bargaining. | | | | |
| | Answer: A competition over who is going to people, etc.) | get the most of a limited resource (can be mo | oney, time, | | |
| 8. | 2) List two situations when distributive bargain | ing strategies are useful. | | | |
| | Answer: When a negotiator wants to maximize relationship with the other party is n | ze the value obtained in a single deal and who | en the | | |
| Я | 3) A negative bargaining range occurs when: | | | | |
| 0 | o, i i ilognoi to onignilling innigo occurb Wilcil. | | | | |

Answer: The seller's resistance point is above the buyer's.

84) How can a negotiation that begins with a negative bargaining range be resolved?

Answer: If one or both parties are persuaded to change their resistance points, or if someone else forces a solution upon them that one or both parties dislike.

85) Define BATNA.

Answer: Best Alternative To a Negotiated Agreement.

86) What can happen when one or both parties do not think they got the best agreement possible?

Answer: One party or the other may try to get out of the agreement later or try to recoup losses or get

Answer: One party or the other may try to get out of the agreement later or try to recoup losses or get even.

87) "The higher the other party's estimate of your cost of delay or impasse, the stronger the other party's resistance point will be." Explain.

Answer: If the other party sees that you need a settlement quickly and cannot defer it, he or she can seize this advantage and press for a better outcome. Expectations will rise and the other party will set a more demanding resistance point. The more you can convince the other that your costs of delay or aborting negotiations are low (that you are in no hurry and can wait forever), the more modest the other's resistance point will be.

88) In a short essay, defend or refute the following statement: "The less the other party values an issue, the higher his or her resistance point will be."

Answer: The less the other party values an issue, the *lower* his or her resistance point will be. The resistance point may soften as the person reduces how valuable he or she considers that issue. If you can convince the other party that a current negotiating position will not have the desired outcome or that the present position is not as attractive as the other believes, then he or she will adjust the resistance point.

89) What are the four important tactical tasks for a negotiator in a distributive bargaining situation?

Answer: (1) Assess the other party's outcome values and the costs of terminating negotiations; (2) manage the other party's impression of one's own outcome values; (3) modify the other party's perception of his or her own outcome values; (4) manipulate the actual costs of delaying or aborting negotiations.

90) What is the simplest way to screen a position?

Answer: Say and do as little as possible.

91) Define calculated incompetence.

Answer: The negotiating agent is not given all of the necessary information, making it impossible for information to be leaked.

92) Define selective presentation.

Answer: Negotiators reveal only the facts necessary to support their case.

93) Describe the use of emotional reaction.

Answer: Another form of direct action negotiators can take to provide information about what is important to them. Powerful displays allow negotiators to claim more value.

94) What are the three ways to manipulate the costs of delay in negotiation?

Answer: (1) Plan disruptive action; (2) ally with outsiders; (3) manipulate the scheduling of negotiations.

95) Why is it advantageous to make an extreme opening offer?

Answer: Gives more room for movement in negotiation and therefore more time to learn the other party's priorities. May create the impression that there is a long way to go before a reasonable settlement will be achieved and more concessions than originally intended may have to be made to bridge the difference between the two opening positions.

96) What are the disadvantages of making a more extreme opening offer?

Answer: It may be summarily rejected by the other party, and it communicates an attitude of toughness that may be harmful to long term relationships.

97) What characteristics of the original offer, opening stance and opening concession signal a position of firmness? Of flexibility?

Answer: Firmness: an extreme original offer, a determined opening stance, and a very small opening concession. Flexibility: a more moderate opening offer, a reasonable co-operative opening stance, and a more generous initial concession.

98) What are the advantages of adopting a flexible position?

Answer: Can learn about the other party's outcome values and perceived possibilities. Establishes a co-operative rather than combative relationship, hoping to get a better agreement. Keep negotiations going.

99) Discuss the importance of reciprocating (or not reciprocating) concessions.

Answer: Concession making indicates an acknowledgment of the other party and a movement toward the other's position. It implies recognition of that position and its legitimacy. If the other party does not reciprocate, the concession maker may appear to be weaker by having given up something and received nothing in return. If the giver has made a major concession on a significant point, it is expected that the return offer will be on the same item or one of similar weight and somewhat comparable magnitude. To make an additional concession when none has been received (or when what was given was inadequate) can imply weakness and can squander valuable maneuvering room.

100) What is the disadvantage of letting the absence of further concessions convey the message of the final offer?

Answer: The other party may not recognize at first that the last offer was the final one and might volunteer a further concession to get the other to respond. Finding that no further concession results, the other party may feel betrayed and perceive that the pattern of concession-counter concession was violated.

101) What are the risks involved when using hardball tactics?

Answer: Harm to reputation, losing the deal, negative publicity, and dealing with the other party's revenge.

102) What are the strategies for responding to hardball tactics?

Answer: Ignore them, discuss them, respond in kind, and co-opt the other party. Also discussed in the text but not listed specifically: preparation, familiarity with hardball tactics, identification and discussing the tactics, halting the negotiation process, team negotiations.
