In portfolio analysis, a management evaluates a firm's portfolio and allocates resources according to which products are expected to be the most profitable for the firm in the future. Portfolio analysis is typically performed at the strategic business unit (SBU) or product line level of the firm, though managers can also use it to analyze brands or even individual items. An SBU is a division of the company that can be managed somewhat independently from other divisions since it markets a specific set of products to a clearly defined group of customers.

Learning Objective: 02-05 Outline the implementation of the marketing mix as a means to increase customer value.

Topic: 02-25 Portfolio Analysis

116. Explain the various steps involved in developing a marketing plan.

There are five steps in developing a marketing plan.

- Step 1, Define the Business Mission and Objectives: The mission statement, a broad description of a firm's objectives and the scope of activities it plans to undertake, attempts to answer two main questions: What type of business are we? and What do we need to do to accomplish our goals and objectives? These fundamental business issues must be answered at the highest corporate levels before marketing executives can get involved.
- Step 2, Conduct a Situation Analysis: After developing its mission, a firm next must perform a situation analysis, using a SWOT analysis that assesses both the internal environment with regard to its strengths and weaknesses (internal analysis) and the external environment in terms of its opportunities and threats (external analysis). Situation analysis also includes an examination of market trends, customer analysis, and competitive analysis.
- Step 3, Identify and Evaluate Opportunities by Using STP (Segmentation, Targeting, and Positioning): After completing the situation analysis, the next step is to identify and evaluate opportunities for increasing sales and profits by using STP. With STP, the firm must first understand customer needs and wants through market research, then divide the market or customers into distinct subgroups or segments, determine which of those segments it should pursue or target, and finally decide how it should position its products and services to best meet the needs of those chosen targets.
- Step 4, Implement Marketing Mix and Allocate Resources: When the firm has identified and evaluated different growth opportunities by performing an STP analysis, the real action begins. The company has decided what to do, how to do it, and how many resources the firm should allocate to it. In the fourth step of the planning process, marketers implement the marketing mix—product, price, promotion, and place—for each product and service on the basis of what

it believes its target markets will value. At the same time, it makes important decisions about how it will allocate its scarce resources to its various products and services. Each element of the four Ps must be fully integrated to achieve a coherent strategy.

- Step 5, Evaluate Performance by Using Marketing Metrics: The final step in the planning process includes evaluating the results of the strategy and implementation program by using marketing metrics. A metric is a measuring system that quantifies a trend, dynamic, or characteristic. Metrics are used to explain why things happened and to project the future. They make it possible to compare results across regions, business units, product lines, and time periods. The firm can determine why it achieved or did not achieve its performance goals with the help of these metrics.

117. As part of a study project, Rachel has to choose a firm and conduct a detailed SWOT analysis. Explain how Rachel will conduct the analysis.

Student answers will vary. A SWOT analysis is designed to help the firm determine areas in which it is strong and can compete effectively and areas where it is weak and vulnerable to competitive attacks. A SWOT analysis assesses the internal environment with regard to its strengths and weaknesses (internal analysis) and the external environment in terms of its opportunities and threats (external analysis). Students should select a firm and analyze its strengths, weaknesses, opportunities, and threats.

Segmentation is the process of dividing the market into distinct groups of customers where each individual group has similar needs, wants, or characteristics and therefore might appreciate products or services geared especially for them in similar ways. Targeting is the process of evaluating the attractiveness of various market segments and then deciding which to pursue as a market.

119. Briefly explain the four Ps of marketing.

The four Ps are as follows:

- **Product:** Products, which include services, constitute the first of the four Ps. Because the key to the success of any marketing program is the creation of value, firms attempt to develop products and services that customers perceive as valuable enough to buy.
- **Price:** The second element of the marketing mix is price. As part of the exchange process, a firm provides a product or a service, or some combination thereof, and in return it receives money. Value-based marketing requires that firms charge a price that customers perceive as giving them good value for the products and services they receive.
- **Place:** For the third P, place, the firm must be able to, after it has created value through a product and/or service, make the product or service readily accessible when and where the customer wants it.
- **Promotion:** The fourth P of the marketing mix is promotion. Marketers communicate the value of their offering, or the value proposition, to their customers through a variety of media, including TV, radio, magazines, buses, trains, blimps, sales promotion, publicity, the sales force, and the Internet.

120. Explain the four major growth strategies that organizations adopt.

The four major growth strategies are as follows.

A market penetration strategy employs the existing marketing mix and focuses the firm's efforts on existing customers. Such a growth strategy might be achieved by encouraging current customers to patronize the firm more often or buy more merchandise on each visit or by attracting new consumers from within the firm's existing target market.

A market development strategy employs the existing marketing offering to reach new market segments, whether domestic or international or segments not currently served by the firm.

The third growth strategy option, a product development strategy, offers a new product or service to a firm's current target market.

A diversification strategy, the last of the growth strategies, introduces a new product or service to a market segment that is currently not served.
