

## Module 02 International Trade and Investment

1) International trade includes exports, imports, and foreign direct investment.

- true
- false

### Question Details

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Bloom's : Remember

Difficulty : 1 Easy

International trade includes exports and imports, but not foreign direct investment.

2) Nearly 60 percent of global output is now destined for international trade.

- true
- false

### Question Details

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Nearly 60 percent of global output is now destined for international trade—another indication of the extent to which international trade has become a critical factor in the economic activity of many, if not most, of the countries of the world.

3) The proportion of world trade coming from North America, Latin America, Africa, and the Middle East has decreased since 1983.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Although the absolute value of their merchandise exports increased, the proportion of world trade coming from North America, Latin America, Africa, and the Middle East *decreased* since 1983, reflecting the greater level of export growth in other regions.

4) Currently, the United States is the largest exporter in the world.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Bloom's : Remember

Difficulty : 1 Easy

Not only has China become the largest exporter in the world, but also 500 million Chinese have been lifted out of poverty by the country's trade-driven policies.

5) Thanks in part to communication advancements, international trade has stabilized and become evenly distributed across all countries of the world.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

The 10 largest exporters and importers collectively account for over half the world's exports and imports, which highlights the fact that international trade continues to be unevenly distributed across countries and around the world.

6) The development of expanded regional trade agreements, such as the Association of Southeast Asian Nations, Mercosur, and the EU, can substantially alter the level and proportion of trade flows within and across regions.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-02 Identify who participates in trade.

Topic : Overview of Trade

World trade continues to be dominated by exchanges within—not between—geographic regions. This regionalization of trade is being reinforced by the development of expanded regional trade associations and agreements, such as the Association of Southeast Asian Nations (ASEAN, which includes Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand, and Vietnam), Mercosur in South America (comprised of Argentina, Bolivia, Brazil, Paraguay, Uruguay, and Venezuela, and the 28-nation European Union).

7) The first formulation of international trade theory, by Adam Smith, was motivated by political considerations.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

A profoundly influential early attempt to develop an international trade theory was actually politically motivated. Adam Smith, a Scottish philosopher and economist, was incensed by British government intervention and control over both domestic and foreign trade. In 1776, he published *An Inquiry into the Nature and Causes of the Wealth of Nations*, in which he attacked the mercantilist philosophy that prevailed at that time.

8) The central idea of mercantilism is based on the specialization of goods and services as a way for a company to distinguish itself from others.

- true
- false

#### Question Details

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

A complex political and economic theory, mercantilism viewed precious metals such as gold and silver as the only source of wealth, and their accumulation as essential to a nation's welfare. Because England had no gold or silver mines, mercantilists looked to exploration and international trade to supply these metals. The government established restrictions such as import duties to reduce imports, and subsidies to exporters to increase exports. In addition to protecting jobs within the mercantilist nation, those acts created a trade surplus meant to generate increased holdings of gold and silver.

9) The theory of absolute advantage suggests that under free, unregulated trade, each nation should specialize in producing those goods it can produce most efficiently, based on naturally occurring endowments such as minerals.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

Specialization should be based on market forces, and its absolute advantage could be either natural or acquired.

**10)** According to the theory of comparative advantage, international trade can still be a positive-sum game that benefits both countries having an absolute advantage over one another.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

British economist David Ricardo demonstrated in 1817 that even though one nation held an absolute advantage over another in the production of each of two different goods, international trade could still be a positive-sum game in which both countries benefit. The only limitation to such benefit-creating trade is that the less-efficient nation cannot be *equally* less efficient in the production of both goods.

**11)** Currency devaluation helps a nation avoid losing markets and regain competitiveness in world markets.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

A nation can attempt to regain competitiveness in world markets through currency devaluation, which lowers the value of a nation's currency relative to other currencies and therefore effectively lowers the prices of its exports.

**12)** The international product life-cycle theory may have its greatest usefulness in explaining trade and investment behavior when international firms introduce their new products in home markets first.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

The international product life-cycle theory may have its greatest usefulness in explaining trade and investment behavior when international firms introduce their new products in home markets first. For example, personal computers were initially introduced in the United States, then exported to other countries. Over time, production moved to lower-cost locations such as Taiwan and China, and now almost all computers sold in the United States are imported from abroad.

**13)** The predictable decline in the average cost of producing each unit of output as a production facility gets larger and output increases is known as the experience curve.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

The predictable decline in the average cost of producing each unit of output as a production facility gets larger and output increases is known as an economy of scale. An experience curve refers to the rising scale on which efficiency improves as a result of cumulative experience and learning.

14) Michael Porter claims that at least 10 types of variables can influence a firm's ability to gain competitive advantage.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Porter's Diamond Model

Porter's diamond model of national advantage identified four kinds of variables that can influence a firm's ability to gain competitive advantage: demand conditions, factor conditions, related and supporting industries, and firm strategy.

15) Portfolio investment is the purchase of sufficient stock in a firm to obtain significant management control.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-04 Describe the size, growth, and direction of foreign direct investment.

Topic : Benefits and Challenges of Foreign Direct Investment

Portfolio investment is the purchase of stocks and bonds to obtain a return on the funds invested. Direct investment is the purchase of sufficient stock in a firm to obtain significant management control.

**16)** The proportion of the outstanding stock of foreign direct investment accounted for by the United States declined by two-thirds over the past 20 years.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-04 Describe the size, growth, and direction of foreign direct investment.

Topic : Benefits and Challenges of Foreign Direct Investment

The proportion of the outstanding stock of foreign direct investment accounted for by the United States declined by almost 30 percent in the past 20 years. U.S. individuals and corporations still had \$7.8 trillion invested abroad in 2018. This total was more than four times the FDI of the next-largest investor, Hong Kong.

**17)** The vast proportion of outward FDI, about two-thirds, originates from the developed countries.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-04 Describe the size, growth, and direction of foreign direct investment.

Topic : Benefits and Challenges of Foreign Direct Investment

The vast proportion of outward FDI, about two-thirds, originates from the developed countries.

18) The majority of the world's outward FDI has been in the form of imports and exports.

true

false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-04 Describe the size, growth, and direction of foreign direct investment.

Topic : Benefits and Challenges of Foreign Direct Investment

Much of the world's outward FDI has been associated with mergers and acquisitions. Historically, approximately two-thirds of the value of corporate investments made in the United States from abroad have been spent to acquire existing companies rather than to establish new ones

19) Internalization theory suggests that when an organization has superior knowledge, it may obtain a better price by selling it to the open market.

true

false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-05 Explain several of the theories of foreign direct investment.

Topic : Theories of Foreign Direct Investment

Internalization theory suggests that to obtain a higher return on its investment, a firm will transfer its superior knowledge to a foreign subsidiary that it controls, rather than sell it in the open market.

**20)** The dynamic capability theory states that for a firm to invest overseas, it must have three kinds of advantages: ownership specific, internalization, and location specific.

- true
- false

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-05 Explain several of the theories of foreign direct investment.

Topic : Theories of Foreign Direct Investment

Ownership-specific, internalization, and location-specific advantages are part of Dunning's Eclectic Theory of International Production. The dynamic capability theory suggests that for a firm to successfully invest overseas, it must have not only ownership of unique knowledge or resources, but also the ability to dynamically create, sustain, and exploit these capabilities over time.

**21)** The volume of international trade in services exports in 2017, worldwide, was

- A) \$5.4 trillion.
- B) \$8.5 trillion.
- C) \$12.3 trillion.
- D) \$18.8 trillion.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Physical goods, such as automobiles, food, and clothing, accounted for \$17.5 trillion of the \$23 trillion in international trade in 2017. Services, including such activities as insurance, travel, consulting, movies, and music, made up the remaining \$5.4 trillion of international trade.

22) When examining the volume of international trade, how are goods and services currently represented?

- A) Exports of goods and services quadrupled between 1990 and 2013.
- B) Exports of services grew faster than trade in merchandise for the last 20 years.
- C) There are fewer goods traded than services.
- D) Goods and services have reached equal levels of trading volumes.

**Question Details**

AACSB : Reflective Thinking

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Physical goods, such as automobiles, food, and clothing, accounted for \$17.5 trillion of the \$23 trillion in international trade in 2017. Services, including such activities as insurance, travel, consulting, movies, and music, made up the remaining \$5.4 trillion of international trade. Trade in services has been growing faster than trade in merchandise for the last 20 years.

23) What percentage of global output is now bound for international trade?

- A) 10 percent
- B) Less than 5 percent
- C) almost 50 percent
- D) 60 percent

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Bloom's : Remember

Difficulty : 1 Easy

Nearly 60 percent of global output is now destined for international trade—another indication of the extent to which international trade has become a critical factor in the economic activity of many, if not most, of the countries of the world.

24) Since 1983, the proportion of world trade coming from the United States has

- A) increased by 20 percent.
- B) tripled.
- C) decreased overall.
- D) not changed.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Bloom's : Remember

Difficulty : 1 Easy

Although the absolute value of their merchandise exports increased, the proportion of world trade coming from North America, Latin America, Africa, and the Middle East *decreased* since 1983, reflecting the greater level of export growth in other regions.

25) The proportion of merchandise exports from Asia has \_\_\_\_\_ since 1983.

- A) increased by 20 percent
- B) tripled
- C) seen an overall decline
- D) almost doubled

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Bloom's : Remember

Difficulty : 1 Easy

The proportion of merchandise exports from Asia has almost doubled since 1983, with China accounting for over 83 percent of the increase. Not only has China become the largest exporter in the world, 500 million Chinese have been lifted out of poverty by that country's trade-driven policies.

- 26) Since 1980, the United States proportion of world trade in commercial services has
- A) not changed.
  - B) increased one-third.
  - C) decreased overall.
  - D) Increased more than fivefold.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

Bloom's : Remember

Difficulty : 1 Easy

All regions and essentially all the primary-world nations experienced an absolute increase in the dollar volume of their services exports, although the proportion of world exports of commercial services from Latin America, the European Union, Africa, and the Middle East has declined since 1980. However, the United States proportion has risen by approximately one-third since 1980, and Asia's proportion has grown at an even greater rate, with China accounting for the largest part of that growth.

- 27) Overall, what has occurred with the dollar volume of service exports worldwide?

- A) The dollar volume of exports has maintained a low, but consistent, rate.
- B) Service exports have decreased with the advent of competition.
- C) There has been an absolute increase.
- D) There has been no change.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

All regions and essentially all the primary-world nations experienced an absolute increase in the dollar volume of their services exports, though the proportion of world exports of commercial services from Latin America, the European Union, Africa, and the Middle East has declined since 1980.

**28)** The rapid expansion of world exports since 1980 demonstrates that

- A) businesspeople can expect to meet lower levels of competition in their domestic markets.
- B) domestic business cannot compete with cheap imports.
- C) the opportunity to increase sales by exporting is a viable growth strategy.
- D) jobs will inevitably decline in developed countries due to import competition.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-01 Describe the magnitude of international trade and how it has grown.

Topic : The Changing Nature of the Global Economy

The rapid expansion of world exports since 1980 demonstrates that the opportunity to increase sales by exporting is a viable growth strategy and one that can benefit the exporting nations by creating jobs for their citizens. At the same time, however, the growth of exports from individual nations should be a warning to managers that they must be prepared to meet increased competition from these exports in their own domestic markets.

**29)** In examining the volume of international trade, the proportion of world exports and imports accounted for by the 10 largest exporting and importing nations in 2016

- A) was less than 10 percent.
- B) was approximately 25 percent.
- C) exceeded 50 percent.
- D) was approximately one-third.

Learning Objective : 02-02 Identify who participates in trade.

Topic : Overview of Trade

Trade surplus—the amount by which the value of a nation's exports exceeds the value of its imports.

**45)** In 2016, what was included in the five largest categories of U.S. goods exported to China?

- A) furniture
- B) grains
- C) toys
- D) soft goods

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-02 Identify who participates in trade.

Topic : Overview of Trade

Examining these sources would reveal, for example, that in 2016 the five largest categories of U.S. goods exported to China were grains (e.g., soybeans), civilian aircraft and equipment, electrical machinery, machinery, and passenger cars, while the largest categories of goods imports from China included electrical machinery, machinery, furniture and bedding, toys and sports equipment, and footwear.

**46)** In 2016, what was the included in the five largest categories of U.S. goods imported from China?

- A) aircraft
- B) grains
- C) automobiles
- D) footwear

**Question Details**

AACSB : Reflective Thinking

Difficulty : 2 Medium

Learning Objective : 02-02 Identify who participates in trade.

Topic : Overview of Trade

Examining these sources would reveal, for example, that in 2016 the five largest categories of U.S. goods exported to China were grains (e.g., soybeans), civilian aircraft and equipment, electrical machinery, machinery, and passenger cars, while the largest categories of goods imports from China included electrical machinery, machinery, furniture and bedding, toys and sports equipment, and footwear.

47) Supporters of mercantilism would agree that

- A) accumulation of precious metals is an activity essential to a nation's welfare.
- B) industrial development is the primary source of a nation's wealth.
- C) trade policies that generally benefited consumers and emerging industrialists should be promoted.
- D) more than one nation can maintain a comparative advantage.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

Supporters of mercantilism viewed precious metals such as gold and silver as the only source of wealth, and their accumulation as essential to a nation's welfare. Because England had no gold or silver mines, mercantilists looked to exploration and international trade to supply these metals. The government established restrictions such as import duties to reduce imports, and subsidies to exporters to increase exports. In addition to protecting jobs within the mercantilist nation, those acts created a trade surplus meant to generate increased holdings of gold and silver. Of course, mercantilism also generated benefits for certain economic groups, such as domestic merchants, artisans, and shippers, though at a cost to other groups including consumers and emerging industrialists.

**48)** Mercantilists believed that

- A) merchants should import goods to raise the level of living.
- B) governments should lower import duties.
- C) a nation should have an export surplus in order to accumulate precious metals.
- D) a nation should produce goods for which there is a comparative advantage.

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

Mercantilists viewed precious metals such as gold and silver as the only source of wealth, and their accumulation as essential to a nation's welfare. Because England had no gold or silver mines, mercantilists looked to exploration and international trade to supply these metals. The government established restrictions such as import duties to reduce imports, and subsidies to exporters to increase exports. In addition to protecting jobs within the mercantilist nation, those acts created a trade surplus meant to generate increased holdings of gold and silver. Of course, mercantilism also generated benefits for certain economic groups, such as domestic merchants, artisans, and shippers, though at a cost to other groups including consumers and emerging industrialists.

**49)** Who advocated the early attempt to develop an international trade theory in response to the practice of mercantilism?

- A) David Ricardo
- B) Raymond Vernon
- C) Stefan Linder
- D) Adam Smith

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

A profoundly influential early attempt to develop an international trade theory was actually politically motivated. Adam Smith, a Scottish philosopher and economist, was incensed by British government intervention and control over both domestic and foreign trade. In 1776, he published *An Inquiry into the Nature and Causes of the Wealth of Nations*, in which he attacked the mercantilist philosophy that prevailed at that time.

**50)** Adam Smith argued against mercantilism by claiming that

- A) governments, not market forces, should determine the directions, volume, and composition of international trade.
- B) a nation could trade advantageously if it had a comparative advantage.
- C) market forces, not government controls, should determine direction, volume, and the composition of international trade.
- D) customers' tastes are affected by income levels.

**Question Details**

AACSB : Reflective Thinking

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

Adam Smith argued against mercantilism by claiming that market forces, not government controls, should determine the direction, volume, and composition of international trade. He advocated free, unregulated trade, in which each nation should specialize in making those goods it could produce most efficiently—goods for which it had an absolute advantage, either natural or acquired.

**51)** The capability of one nation to produce more of a good or service than another country for the same or lower cost of inputs is a(n)

- A) comparative advantage.
- B) absolute advantage.
- C) mercantilist advantage.
- D) trade surplus.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

Absolute advantage exists when a nation can produce more of a good or service than another country for the same or lower cost of inputs.

**52)** The United States can produce more wheat for the same or lower costs than many other countries. This is an example of

- A) a trade surplus.
- B) economies of scale.
- C) absolute advantage.
- D) mercantilism.

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

Absolute advantage exists when a nation can produce more of a good or service than another country for the same or lower cost of inputs.

**53)** If Ecuador has an absolute advantage in coffee and Argentina in wheat, then, according to trade theory

- A) Ecuador should focus production on coffee and trade for other goods.
- B) Ecuador would do well to produce its own wheat rather than import it from Bolivia.
- C) Argentina should focus on producing coffee and trade for wheat.
- D) there will be a perfect trade balance between the two countries.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

Absolute advantage exists when a nation can produce more of a good or service than another country for the same or lower cost of inputs. Nations would then export some goods to pay for imports that have been produced more efficiently elsewhere. With his theory of absolute advantage, Smith showed that both nations gain from trade, although not necessarily equally.

**54)** A market situation in which there is a sufficiently large number of well-informed buyers and sellers of a homogeneous product such that no individual participant has enough power to determine the price of the product, resulting in a marketplace that is efficient in production and allocation of products is known as

- A) absolute advantage.
- B) mercantilism.
- C) trade deficit.
- D) perfect competition.

**Question Details**

AACSB : Reflective Thinking

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

When one nation is less efficient than another nation in the production of each of two goods, the less efficient nation has a comparative advantage in the production of the good for which its absolute disadvantage is less.

57) According to the theory of comparative advantage, trade can benefit

- A) the exporting country involved in a trade.
- B) neither country involved in a trade.
- C) both countries involved in a trade.
- D) the importing country involved in a trade.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

British economist David Ricardo demonstrated in 1817 that even though one nation held an absolute advantage over another in the production of each of two different goods, international trade could still be a positive-sum game in which both countries benefit.

**58)** According to the theory of comparative advantage, a nation

- A) should produce the goods for which its absolute disadvantage is less.
- B) can gain from trade if it is equally inefficient in producing two goods.
- C) must have an absolute advantage in at least one good to gain from trade.
- D) should strive to produce trade surpluses to acquire supplies of precious metals.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

The theory of comparative advantage proposes that when one nation is less efficient than another nation in the production of each of two goods, the less efficient nation has a comparative advantage in the production of the good for which its absolute disadvantage is less.

**59)** A nation that is struggling to remain competitive in the world market may decide to reduce the value of the country's currency relative to other currencies. This process is called currency

- A) surplus.
- B) deficit.
- C) customization.
- D) devaluation.

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-03 Distinguish among the theories that explain why certain goods are traded internationally.

Topic : Trade Theories and Their Implications

This example suggests that a nation can attempt to regain competitiveness in world markets through currency devaluation, which lowers the value of a nation's currency relative to other currencies and therefore effectively lowers the prices of its exports.

- 60) How are exchange rates used in international trade?
- A) Exchange rates are used to convert from foreign to domestic currency.
  - B) Exchange rates indicate which products create an absolute advantage for trading partners.
  - C) Exchange rates are used to devalue property in exchange for goods.
  - D) Exchange rates set the costs of labor.

**Question Details**

AACSB : Reflective Thinking

Bloom's : Understand

Learning Objective : 02-05 Explain several of the theories of foreign direct investment.

Topic : Theories of Foreign Direct Investment

Difficulty : 1 Easy

The establishment of new facilities from the ground up is known as greenfield investment.

**88)** The purchase of an existing business in another nation is known as a

- A) cross-border acquisition.
- B) strategic alliance.
- C) greenfield investment.
- D) home country expansion.

**Question Details**

AACSB : Reflective Thinking

Bloom's : Understand

Learning Objective : 02-05 Explain several of the theories of foreign direct investment.

Topic : Theories of Foreign Direct Investment

Difficulty : 1 Easy

The purchase of an existing business in another nation is known as a cross-border acquisition.

**89)** The monopolistic advantage theory suggests that firms in oligopolistic industries are likely to \_\_\_\_\_ foreign direct investment when they have technical and other advantages over indigenous firms.

- A) increase
- B) reduce
- C) ignore
- D) not change

**Question Details**

AACSB : Reflective Thinking

Accessibility : Keyboard Navigation

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-05 Explain several of the theories of foreign direct investment.

Topic : Theories of Foreign Direct Investment

The monopolistic advantage theory suggests that foreign direct investment is made by firms in industries with relatively few competitors, due to their possession of technical and other advantages over indigenous firms. Therefore, developing these advantages makes such firms likely to increase their FDI to exploit these advantages.

**90)** The monopolistic advantage theory states that

- A) a firm that has a monopoly has a major advantage in overseas investment.
- B) FDI is made by firms in oligopolistic industries possessing technical advantages over local companies.
- C) a firm that has a monopoly domestically will have no competition making overseas investments.
- D) the firm making the overseas investment first has a monopolistic advantage.

**Question Details**

Bloom's : Understand

Difficulty : 2 Medium

Learning Objective : 02-05 Explain several of the theories of foreign direct investment.

Topic : Theories of Foreign Direct Investment

The monopolistic advantage theory suggests that foreign direct investment is made by firms in industries with relatively few competitors, also known as oligopolistic industries, due to their possession of technical and other advantages over indigenous firms.

**91)** An industry that has a limited number of competing firms, such as the U.S. mobile phone market in which four firms controlled 98 percent of the market in 2018, is known as

- A) perfect competition.
- B) a monopoly.
- C) an oligopolistic industry.
- D) deregulated.

- 114) eclectic
- 115) internalization

116) Answers will vary, but might include the following points: focusing on a nation that is already a sizable purchaser of goods coming from a would-be exporter's country has such potential advantages as (1) the business climate in the importing nation is relatively favorable, (2) export and import regulations are not insurmountable, (3) there should be no strong cultural objections to buying that nation's goods, (4) satisfactory transportation facilities have already been established, (5) import channel members (merchants, banks, and customs brokers) are experienced in handling import shipments from the exporter's area, (6) foreign exchange to pay for the exports is available, and (7) the government of a trading partner may be applying pressure on importers to buy from countries that are good customers for that nation's exports.

117) Answers will vary, but mercantilism traditionally has been interpreted as an economic philosophy that viewed the accumulation of precious metals as an activity essential to a nation's welfare because these metals were, in the mercantilists' view, the only source of wealth. As a result, the government established economic policies that promoted exports and stifled imports, resulting in a trade surplus and protection of jobs in the mercantilist nation. Mercantilist behavior tended to be costly to groups including consumers and some emerging industrialists, and to raise the potential for retaliatory efforts by other governments who encounter trade deficits due to the policies of the mercantilist nation.

118) Answers will vary, but the theory of absolute advantage states that a nation has absolute advantage when it can produce a larger amount of a good or service for the same amount of inputs as can another country, or when it can produce the same amount of a good or service using fewer inputs than could another country. Under conditions of free, unregulated trade, each nation should specialize in producing those goods that it could produce more efficiently, exporting some of those goods to pay for imports of goods that could be produced more efficiently elsewhere and thus enabling both nations to gain from trade.

119) Answers will vary, but the theory of comparative advantage states that a nation having absolute disadvantage in the production of two goods with respect to another nation has a comparative or relative advantage in the production of the good in which its absolute disadvantage is less. Therefore, there will be potential gains from trade even if one country is less efficient than another in the production of each of two goods (as long as it is not equally less efficient in the production of both goods).

120) Answers will vary. The concept of an international product life cycle (IPLC) was developed by Raymond Vernon of Harvard. This theory addresses the role of innovation in trade patterns by explaining why a product that begins as a nation's export eventually becomes its import, thus viewing a product as going through a full life cycle. The theory has four stages. Stage 1. The United States innovates and exports: Because the United States has the largest population of high-income consumers of any nation in the world, competition for their patronage is intense. Manufacturers constantly search for better ways to satisfy their customers' needs, maintaining large research and development laboratories and keeping in close contact both with the home market and with suppliers of the materials they need for product development, who are often local. Stage 2. Foreign production begins: Overseas consumers, especially in developed nations, are similar to U.S. customers in their need for and their ability to purchase the product. Export volume grows and may become large enough to support production abroad, especially in larger markets. The technology for producing the good has become fairly stable, and if the innovator is a multinational firm, it will often be sending new product information to subsidiaries, with complete details on how to produce it. Stage 3. Foreign competition appears in export markets: As early foreign manufacturers gain experience in marketing and production; their costs will fall. Saturation of their local markets will cause them to look for buyers elsewhere. They may even be able to undersell the U.S. producers if they enjoy an advantage such as lower labor or raw material costs. In this stage, foreign firms are competing in U.S. export markets, and as a result, U.S. export sales will continue to decline. Stage 4. Import competition appears in the United States: If foreign producers attain sufficient economies of scale, they may be able to compete in quality with and underprice U.S. firms in the domestic market. From that point on, the U.S. market will be served exclusively

(or nearly so) by imports. Televisions, footwear, and semiconductor chips are examples. The rise in imports puts increasing pressure on the innovating companies to achieve product innovation and improvement, which may initiate a new IPLC.
