

Student name: _____

1) Some species are better adapted to their environment in a way that helps them survive and reproduce, while other species do not adapt well and die. This process is called

- A) canalization.
- B) sociobiology.
- C) natural selection.
- D) genetic inheritance.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Natural Selection

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

2) Natural selection favors individuals of a species that are best able to _____ and _____.

- A) survive; reproduce
- B) find food; hide
- C) survive change; adapt
- D) change; adapt

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Natural Selection

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

- 3) Evolutionary psychology holds that
- A) natural selection does not ring true for personality characteristics.
 - B) natural selection favors certain behaviors that increase reproductive success.
 - C) biological evolution explains why humans live well beyond child-bearing years.
 - D) only physical development is a stage-like process.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Evolutionary Psychology

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

- 4) Natural selection operates primarily on characteristics that are tied to
- A) group social interaction.
 - B) psychological wellness.
 - C) reproductive fitness.
 - D) developmental plasticity.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Natural Selection

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

- 5) Which of the following statements describes the main idea of David Buss's theory?

- A) It is not useful to compare human social behavior with social behavior in other species.
- B) Evolutionary processes can influence behavior as well as physical features.
- C) Behavior is determined by the environmental consequences it brings about.
- D) Development proceeds in a series of stages.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Evolutionary Psychology

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

6) Which of the following explanations do developmental evolutionary psychologists favor for an extended childhood period in human development?

- A) During this time, a human's immune system reaches its full potential.
- B) A long childhood period is a "left over" adaptation from the time when the human life span was considerably shorter than it is today.
- C) Rebellion against authority is a necessary step in the evolutionary development of independent behavior.
- D) During this time, humans develop a large brain and gain the experience required to master the complexities of human society.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Evolutionary Psychology

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Understand

Difficulty : Moderate

7) Which of the following is NOT an idea held by evolutionary developmental psychologists?

- A) Evolved characteristics are not always adaptive in contemporary society.
- B) Some evolved characteristics could be the cause of problems in contemporary society.
- C) All evolved mechanisms are adaptive in contemporary society.
- D) An extended childhood period may be the result of evolution.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Evolutionary Developmental Psychology

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Understand

Difficulty : Moderate

8) Baltes holds that natural selection operates

- A) primarily during the first half of life.
- B) primarily during late adulthood.
- C) through the end of the adolescent period.
- D) through the end of late childhood.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Evolution and Life-Span Development

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

9) According to Baltes, older adults have an increased

- A) generativity.
- B) need for culture-based resources.
- C) benefit in terms of evolutionary selection.
- D) developmental plasticity.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Evolution and Life-Span Development

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

10) A bidirectional view of evolution suggests that

- A) social behavior is a product of evolved biology.
- B) evolved biology is a product of social behavior.
- C) environmental and biological conditions influence each other.
- D) evolution dictates social behavior.

Question Details

Learning Objective : Discuss the evolutionary perspective on life-span development.

Topic : Evolutionary Developmental Psychology

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

11) Which of the following is a double-helix-shaped molecule that contains genetic information?

- A) chromosome
- B) genotype
- C) DNA
- D) gene

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

12) Approximately how many genes does a typical human have, according to the latest research?

- A) more than 100,000
- B) around 83,000
- C) around 36,000
- D) around 21,000

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

13) What did researchers working on the Human Genome project accomplish?

- A) They estimated how many genes humans have.
- B) They determined that many genes are collaborative.
- C) They found that the number of human proteins is higher than the number of human genes.
- D) All answer choices are correct.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

14) In his book *The Dependent Gene*, David Moore reports that

- A) genes are collaborative.
- B) genes act independently.
- C) genes have a one-to-one correspondence with proteins.
- D) the expression of genes is not affected by environmental conditions.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

15) Which of the following *best* explains the nature of genetic expression?

- A) A single gene is the source of a single protein's genetic information.
- B) Events outside of a cell cannot excite or inhibit genetic expression.
- C) Only internal events inside a cell can influence genetic expression.
- D) The activity of genes is affected by internal and external factors.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Understand

Difficulty : Moderate

16) Which of the following has/have 23 unpaired chromosomes?

- A) zygote
- B) both sperm and egg
- C) mitosis
- D) chromosome

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

17) In a human body, all cells except the sperm and egg reproduce by a process called

- A) meiosis.
- B) mitosis.
- C) fertilization.
- D) zygote.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Mitosis

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

18) _____ is a specialized form of cell division that occurs to form eggs and sperm.

- A) Meiosis
- B) Mitosis
- C) Reproduction
- D) Fertilization

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Meiosis

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

19) How many chromosomes does an egg or a sperm have?

- A) 23
- B) 24
- C) 46
- D) 48

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

20) Fertilization results in the formation of a(n)

- A) egg.
- B) zygote.
- C) gamete.
- D) sperm.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Fertilization

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

21) In _____, the number of cells doubles, whereas in _____, the number of chromosomes in the resulting four cells is half of what the parent cell contained.

- A) meiosis; mitosis
- B) mitosis; meiosis
- C) genotype; phenotype
- D) phenotype; genotype

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Mitosis

Topic : Meiosis

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

22) All of a person's genetic material makes up the _____, whereas the _____ consists of only observable characteristics.

- A) phenotype; genotype
- B) genotype; phenotype
- C) dominant gene; recessive gene
- D) recessive gene; dominant gene

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

23) Angela describes her friend as tall and slender with blue eyes and red hair. Angelais describing her friend's

- A) genotype.
- B) phenotype.
- C) dominant genes.
- D) recessive genes.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Basic

Bloom's : Apply

24) You notice that Lou's eyes are a unique shade of green. You have observed his

- A) genotype.
- B) phenotype.
- C) dominant gene.
- D) recessive gene.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

25) Which of the following principles is demonstrated when one gene overrides the potential effect of a second gene?

- A) polygenic inheritance
- B) sex-linked genes
- C) dominant-recessive genes
- D) genetic imprinting

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Dominant-Recessive Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

26) Kevin has blond hair, but both of his parents have brown hair. What might account for Kevin's differing phenotype from both of his parents?

- A) polygenic inheritance
- B) genetic imprinting
- C) sex-linked genes
- D) dominant-recessive genes

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Dominant-Recessive Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

27) *X-linked inheritance* describes the inheritance of a(n)

- A) unaltered gene that is carried on the Y chromosome.
- B) mutated gene that is carried on the Y chromosome.
- C) unaltered gene that is carried on the X chromosome.
- D) mutated gene that is carried on the X chromosome.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Sex-Linked Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

28) Melinda and Joseph both have brown eyes, but their child has blue eyes. This shows that

- A) both Melinda and Joseph are carrying a recessive gene for blue eyes.
- B) either Melinda or Joseph is carrying a recessive gene for blue eyes.
- C) both Melinda and Joseph are carrying a dominant gene for blue eyes.
- D) either Melinda or Joseph is carrying a dominant gene for blue eyes.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Dominant-Recessive Genes

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

29) Most characteristics are the result of the interaction of many different genes. This is the concept of

- A) dominant-recessive inheritance.
- B) sex-linked inheritance.
- C) genetic imprinting.
- D) polygenic inheritance.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Polygenic Inheritance

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

30) People who have hemophilia or fragile-X syndrome are

- A) equally distributed among females and males.
- B) mostly female.
- C) mostly male.
- D) those who have mutated genes carried on the Y chromosome.

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Sex-Linked Chromosomal Abnormalities

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

31) _____ is a genetic disorder that occurs less often in children with mothers who are 16 to 34 years old.

- A) Down syndrome
- B) Turner syndrome
- C) Sickle-cell anemia
- D) Phenylketonuria (PKU)

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Down Syndrome

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

32) Both _____ are genetic disorders caused by the presence of an extra chromosome.

- A) Down syndrome and Turner syndrome
- B) Turner syndrome and sickle-cell anemia
- C) Klinefelter syndrome and Down syndrome
- D) Phenylketonuria (PKU) and XYY syndrome

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Sex-Linked Chromosomal Abnormalities

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

33) _____ syndrome causes males to have undeveloped testes, enlarged breasts, and tallness. The majority with this syndrome are not identified until adulthood.

- A) Down
- B) Klinefelter
- C) Turner
- D) Fragile X

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Sex-Linked Chromosomal Abnormalities

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

34) Which of the following characteristics is likely to be exhibited in boys with fragile X syndrome?

- A) flattened skull
- B) aggression and violence
- C) weakened immune system
- D) mental deficiency

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Sex-Linked Chromosomal Abnormalities

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

35) Conditions like phenylketonuria and sickle cell anemia are produced by _____ abnormalities.

- A) chromosome
- B) sex-linked chromosome
- C) both sex-linked chromosome and gene-linked
- D) gene-linked

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Gene-Linked Chromosomal Abnormalities

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

36) _____ is a genetic disorder that can be controlled by diet.

- A) Down syndrome
- B) Turner syndrome
- C) Sickle-cell anemia
- D) Phenylketonuria (PKU)

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Gene-Linked Chromosomal Abnormalities

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

37) Which of the following genetic disorders occurs most often in African Americans?

- A) Down syndrome
- B) Turner syndrome
- C) sickle-cell anemia
- D) phenylketonuria (PKU)

Question Details

Learning Objective : Describe what genes are and how they influence human development.

Topic : Gene-Linked Chromosomal Abnormalities

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

38) Behavior genetics is the field of study that seeks to discover how individual differences in human traits and development are influenced by

- A) environment.
- B) heredity.
- C) heredity and environment.
- D) behavior.

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Behavior Genetics

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

39) Dr. Santos designs studies to examine the influence of heredity and environment on individual differences in human traits and development. Her field of study is

- A) behavior genetics.
- B) evolutionary genetics.
- C) evolutionary psychology.
- D) developmental genetics.

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Behavior Genetics

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

40) Behavior genetics mostly uses which of the following research methods?

- A) twin studies
- B) adoption studies
- C) both twin studies and adoption studies
- D) neither twin studies nor adoption studies

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Behavior Genetics

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Understand

Difficulty : Moderate

41) Brent is an athlete who has always loved to play catch or shoot baskets with others, and he frequently seeks to do both with his son Todd. Todd is quickly developing the same affinity for sports. This is an example of which type of genotype-environment correlation?

- A) active
- B) passive
- C) evocative
- D) niche-picking

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Passive Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

42) _____ occurs when a child seeks out a setting that is suited to his or her genetically influenced abilities.

- A) Active (niche-picking) genotype-environment correlation
- B) Passive genotype-environment correlation
- C) Supressed genotype-environment correlation
- D) Evocative genotype-environment correlation

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Passive Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

43) Katrina played basketball in high school and in college. She recently enrolled her son in a junior basketball league. This is an example of which type of genotype-environment correlation for Katrina's son?

- A) passive
- B) evocative
- C) active
- D) niche-picking

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Passive Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

44) Kylie is friendly and outgoing. Because of this, people treat her well and often seem drawn to her. This is an example of which type of genotype-environment correlation?

- A) active
- B) passive
- C) evocative
- D) niche-picking

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Evocative Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

45) Hannah is an "easy" child. She rarely cries and is cooperative and pleasant. As a result, she receives much attention and nurturing. This is an example of which type of genotype-environment correlation?

- A) passive
- B) evocative
- C) active
- D) niche-picking

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Evocative Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

46) Dani loves dinosaurs. She always chooses library books about dinosaurs and has even asked her parents to enroll her in a junior paleontology club. This is an example of which type of genotype-environment correlation?

- A) passive
- B) evocative
- C) active
- D) None of the answer choices are correct.

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Active Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

47) Elise has enrolled in a parenting program aimed at teaching parents to recognize and support a child's natural abilities and chosen activities. If she helps her child pursue only activities her child seems drawn to, which type of heredity-environment correlation will she be encouraging?

- A) passive
- B) evocative
- C) active
- D) suggestive

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Active Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

48) Allison learned that she had a good singing voice in childhood. She requested vocal lessons, and now she participates in the school choral program. This is an example of which type of genotype-environment correlation?

- A) passive
- B) evocative
- C) niche-picking
- D) None of the answer choices are correct.

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Active Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

49) Which of the following is a genotype-environment interaction that plays a smaller role in development as children grow older?

- A) passive
- B) evocative
- C) active
- D) niche-picking

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Passive Genotype-Environment Correlations

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

50) Louis and his twin sister are entering late adolescence and preparing to go to different colleges. They are likely

- A) to have less difficulty separating from each other and their primary caregiver than do nontwin siblings.
- B) to have more difficulty separating from each other and their primary caregiver than do nontwin siblings.
- C) to have more distinct and individual senses of self by the time they separate for college than would nontwin siblings.
- D) to have completed their twin-separation process in early adolescence.

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Nonshared Environmental Influences

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

51) The $G \times E$ interaction involves what two specifically measured factors?

- A) variation in DNA and a specific aspect of the environment
- B) variation in DNA and variation in gene-produced proteins
- C) variation in DNA and variation in biological heredity
- D) a specific aspect of the environment and variation in behaviors of peers and relatives

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Epigenetic View

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Understand

Difficulty : Moderate

52) The epigenetic view of development states that development

- A) becomes less influenced by heredity and more influenced by environment as people grow older.
- B) becomes more influenced by heredity and less influenced by environment as people grow older.
- C) is influenced 50 percent by heredity and 50 percent by environment.
- D) is the result of an ongoing, bidirectional interchange between heredity and the environment.

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Epigenetic View

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

53) The relative contributions of heredity and environment are not additive. This means

A) a person's characteristics and behavior are a result of a constantly fluctuating mix of gene expression and environment.

B) some characteristics are solely due to heredity and others are due to environmental conditions.

C) certain characteristics are more linked to heredity and others to environmental conditions.

D) that the person we become is due to x percent genetics and x percent environment.

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Epigenetic View

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Understand

Difficulty : Moderate

54) What is the emerging view among developmentalists about the contributions of both heredity and environment to development?

A) Heredity plays the dominant role in developmental trajectory.

B) Environment plays the dominant role in developmental trajectory.

C) Genes influence complex behaviors and generally lead to a developmental trajectory, but said trajectory is dependent on environment as well.

D) Genes determine developmental trajectory largely regardless of environment.

Question Details

Learning Objective : Explain some of the ways that heredity and environment interact to produce indiv

Topic : Epigenetic View

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

55) During which prenatal development period does differentiation of cells take place?

- A) embryonic
- B) germinal
- C) fetal
- D) fertilization

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Germinal Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

56) Which of the following is the prenatal development period that takes place during the first two weeks afterconception, includes the creation of a zygote, and ends with attachment of the zygote to the uterine wall?

- A) germinal
- B) embryonic
- C) fetal
- D) fertilization

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Germinal Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

57) When does the zygote implant in the lining of the mother's uterus?

- A) immediately after conception
- B) within 2 days after conception
- C) about 10 to 14 days after conception
- D) at the end of the embryonic period

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Germinal Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

58) During which prenatal developmental period do the mesoderm, ectoderm, and endoderm form?

- A) germinal
- B) embryonic
- C) fetal
- D) fertilization

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

59) Which of the following is the correct order of an embryo's layering of cells, starting from the outermost layer?

- A) mesoderm, endoderm, ectoderm
- B) mesoderm, ectoderm, endoderm
- C) endoderm, mesoderm, ectoderm
- D) ectoderm, mesoderm, endoderm

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

60) When baby Juanita was born, she had problems with her eyes, ears, and nose. *Most likely*, Juanita's problems came from defects in the formation of

- A) the ectoderm.
- B) the endoderm.
- C) the mesoderm.
- D) any of the three layers.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

61) Baby Weston's digestive system did not fully develop and does not function properly. This problem likely arose from a defect in the formation of

- A) the ectoderm.
- B) the endoderm.
- C) the mesoderm.
- D) any of the three layers.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

62) The doctor tells Sharice and Jayden that their unborn baby is having problems because of a drastic change in temperature. The _____ has failed to perform its protective function.

- A) umbilical cord
- B) amniotic fluid
- C) placenta
- D) trophoblast

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

63) The _____ connects a baby to the placenta.

- A) amniotic fluid
- B) amnion
- C) umbilical cord
- D) uterine wall

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

64) When a blood test was performed on Cindy's fetus, the doctors found some of Cindy's red blood cells in the fetus's circulatory system. We know that this most likely

- A) is normal because the mother's red blood cells are shared with the fetus.
- B) indicates a problem with the blastocyst, which should not contain red blood cells.
- C) indicates a problem with the placenta, which should block the mother's red blood cells.
- D) indicates a problem with the amnion, which should eliminate the mother's red blood cells.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Bloom's : Apply

Difficulty : Difficult

65) Iyanla, who is pregnant, is concerned that the bacteria from her ear infection may pass to her unborn baby. She does not need to worry because

- A) although the bacteria will pass to the fetus, supercharged white blood cells in the umbilical cord will successfully destroy the infection.
- B) the bacteria will be destroyed by the amniotic fluid.
- C) most bacteria are large molecules and will be filtered out by the placenta and not reach the fetus.
- D) the baby's sinuses are filled with amniotic fluid and are immune to sinus bacteria.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Understand

Difficulty : Moderate

66) During which prenatal developmental period do the following changes—rapid weight gain; active movement of arms and legs; face, forehead, eyelids, nose, and chin becoming distinguishable—take place?

- A) germinal
- B) embryonic
- C) fetal
- D) fertilization

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Fetal Period

70) Teri's doctor has recommended that she take folic acid regularly throughout her pregnancy. The doctor is most likely trying to prevent which of the following from occurring?

- A) spina bifida
- B) fetal neural tube defects
- C) anencephaly
- D) All answer choices are correct.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Prenatal Brain Development

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

71) At approximately 15 weeks after conception, cells move outward from their point of origin to their appropriate locations. This is known as

- A) anencephaly.
- B) spina bifida.
- C) neurogenesis.
- D) neuronal migration.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Prenatal Brain Development

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

72) Which of the following involves the process of cells moving outward from their point of origin to their appropriate locations in the brain?

- A) neuronal migration
- B) neurogenesis
- C) neural connectivity
- D) organogenesis

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Prenatal Brain Development

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

75) Stephanie's doctor reduces the dosage of her daily medication when she begins trying to get pregnant. The principle behind this action states that

- A) the effect of any teratogen is dependent on the genetic susceptibility of the fetus.
- B) the effect of any teratogen is dependent on the time of exposure.
- C) the greater the dose of a teratogen, the greater the effect on prenatal development.
- D) the effect of any teratogen is greater in the last stage of prenatal development.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Teratogen

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

76) During which prenatal developmental period is the probability of a structural defect the greatest?

- A) implantation
- B) germinal
- C) embryonic
- D) fetal

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

77) Which of the following statements about teratogens is NOT true?

- A) Female fetuses are far more likely to be affected by teratogens than male fetuses.
- B) The greater the dose of a teratogen, the greater the effect.
- C) Differences in placental membranes can affect a fetus's exposure to a teratogen.
- D) The time of exposure to a teratogen impacts the type and degree of damage to the fetus.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Teratogen

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

78) Exposure to teratogens after organogenesis is complete is most likely to result in

- A) severe anatomic defects.
- B) stunted growth.
- C) an enlarged cranium.
- D) death of the fetus.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Teratogen

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

79) Which of the following is/are a nonprescription drug known to cause harmful prenatal effects?

- A) estrogen
- B) antibiotics
- C) isotretinoin
- D) aspirin

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Prescription and Nonprescription Drugs

Accessibility : Keyboard Navigation

Topic : Apgar Scale

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

107) Renee's baby was born just minutes ago, and the doctor is checking the baby with the Apgar Scale. Renee's baby is being checked for her

- A) heart rate and respiratory effort.
- B) muscle tone and body color.
- C) reflex irritability.
- D) All answer choices are correct.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Apgar Scale

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

108) The designation of *preterm* is determined by

- A) the ratio of weight at birth to the time of gestation.
- B) the occurrence of birth three weeks or more before full term is reached.
- C) the weight at birth.
- D) the time period of gestation plus weight.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Low Birth Weight and Preterm Infants

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Difficulty : Basic

Bloom's : Understand

109) Baby Alec was born during his mother's 38th week of pregnancy and weighed 5 pounds and 2 ounces. He is considered

- A) to be preterm.
- B) to have low birth weight.
- C) to have very low birth weight.
- D) to be large for the date.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Low Birth Weight and Preterm Infants

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

110) Twins Diego and Demare were delivered during their mother's 34th week of pregnancy. Diego weighed 4 pounds and 3 ounces. Demare weighed 4 pounds and 15 ounces. They are both considered

- A) preterm and low birth weight.
- B) full term and low birth weight.
- C) full term and small for date.
- D) preterm and very low birth weight.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Low Birth Weight and Preterm Infants

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

111) Angie was born after 40 weeks of gestation and weighed 4 pounds. Angie is considered

- A) preterm.
- B) large for date.
- C) low birth weight.
- D) very low birth weight.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Low Birth Weight and Preterm Infants

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

APA Outcome : 1.3: Describe applications of psychology

Gradable : automatic

Difficulty : Moderate

Bloom's : Apply

112) Tamara delivered her babies preterm. Which of the following is NOT among the possible reasons for the preterm delivery?

- A) Tamara was pregnant with triplets.
- B) Tamara was 43 years old.
- C) Tamara used tobacco.
- D) Tamara had low stress.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Low Birth Weight and Preterm Infants

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Moderate

113) According to Tiffany Field's research, what can increase weight gain, alertness, and activity in preterm infants?

- A) massage therapy
- B) letting a mother be the first to hold the baby
- C) breastfeeding
- D) visual stimulation

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Low Birth Weight and Preterm Infants

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : automatic

Bloom's : Remember

Difficulty : Basic

114) Which of the following statements about the postpartum period is accurate?

- A) It involves a steep drop in estrogen and progesterone levels.
- B) It typically lasts from three to four months, returning a woman's body to a prepregnant state.
- C) It is typically characterized by increased levels of sleep.
- D) Most women in the postpartum period do not experience emotional fluctuations, which are considered abnormal reactions.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

Topic : The Postpartum Period

Gradable : automatic

Bloom's : Understand

Difficulty : Moderate

115) Of the following, which is the highest risk factor for developing postpartum depression?

- A) migrant status
- B) obesity
- C) a history of smoking
- D) age above 35

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Accessibility : Keyboard Navigation

APA Outcome : 1.1: Describe key concepts, principles, and overarching themes in psychology

Topic : The Postpartum Period

Gradable : automatic

Bloom's : Remember

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Understand

Difficulty : Moderate

129) List three developmental characteristics or events from each of the germinal, embryonic, and fetal periods of prenatal development.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Germinal Period

Topic : Embryonic Period

Topic : Fetal Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Understand

Difficulty : Moderate

130) Describe the three layers of cells that develop at the beginning of the embryonic period.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Embryonic Period

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Understand

Difficulty : Difficult

131) Describe four prenatal diagnostic tests and when they are administered.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Prenatal Diagnostic Tests

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Understand

Difficulty : Difficult

132) Define *teratogen* and list five teratogens.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Teratogen

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

133) Discuss three conditions that affect the severity of the damage and/or type of birth defects teratogens may cause.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Teratogen

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Understand

Difficulty : Moderate

134) Define *fetal alcohol spectrum disorders* (*FASD*), and list two possible abnormalities that can occur as a result.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Alcohol

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

135) Explain three effects of nicotine on fetal development.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Nicotine

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

136) What are the three ways that a mother infected with HIV may transmit the virus to her offspring?

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Maternal Diseases

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

137) What are the three possible outcomes for a child born to a mother infected with HIV?

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Maternal Diseases

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

138) List three environmental hazards that can endanger the fetus.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Environmental Hazards

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

139) List three paternal factors that can influence fetal development.

Question Details

Learning Objective : Characterize the course of prenatal development and its hazards.

Topic : Paternal Factors

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

140) List two characteristics of each of the three stages of birth.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Stages of Birth

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

141) What would necessitate a cesarean delivery?

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Caesarean Delivery

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Understand

Difficulty : Moderate

142) List four of the five health signs evaluated by the Apgar Scale.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Apgar Scale

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

143) Define *low birth weight*, *preterm*, and *small for date*.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Low Birth Weight and Preterm Infants

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

144) List three possible consequences of low birth weight.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Consequences of Low Birth Weight

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Bloom's : Remember

Difficulty : Moderate

145) Discuss three points in the issue of bonding between mother and newborn.

Question Details

Learning Objective : Summarize how birth takes place and describe the nature of the postpartum period

Topic : Bonding

Accessibility : Keyboard Navigation

APA Outcome : 1.2: Develop a working knowledge of psychology's content domains

Gradable : manual

Difficulty : Difficult

Bloom's : Analyze

- 113) A
- 114) A
- 115) A

116) Natural selection is the evolutionary process that favors individuals of a species that are best adapted to survive and reproduce. Adaptive behavior promotes an organism's survival in its natural habitat.

117) Evolutionary psychology emphasizes the importance of adaptation, reproduction, and "survival of the fittest" in shaping behavior. Evolution favors certain behaviors that can increase chances for reproductive success.

118) Natural selection operates primarily on characteristics that are tied to reproductive fitness.

119) Each human cell contains 46 chromosomes that come in 23 pairs. Chromosomes contain DNA, a complex molecule containing genetic information. Genes are short segments of DNA.

120) Genetic variability provides more characteristics for natural selection to operate on.

121) Genotype is all of a person's genetic material. Phenotype is the way an individual's genotype is expressed in observable and psychological characteristics.

122) The dominant-recessive genes principle is that if one gene in a pair is dominant and one is recessive, the dominant gene exerts its effect and overrides the potential influence of the recessive gene. The recessive gene only expresses itself if the two genes of a pair are both recessive.

Example: In genes that determine hair color, dark brown is dominant and blonde is recessive.

123) Klinefelter syndrome: occurs in males when there is an extra X chromosome, making them XXY instead of XY

Fragile X syndrome: abnormality in the X chromosome that becomes constricted and often breaks

Turner syndrome: occurs in females when one of the X chromosomes is missing (making them XO instead of XX) or when the second X chromosome is partially deleted

XYY syndrome: occurs in males when there is an extra Y chromosome, making them XYY instead of XY

124) The environments of identical twins may be more similar than those of fraternal twins. Environmental influences might get overlooked when results are interpreted.

125) Passive genotype-environment correlations occur because biological parents provide a rearing environment for the child. (Any example of a parent(s) providing opportunities for their child(ren) for which the parent(s) may have a predisposed biological ability or preference.)

Evocative genotype-environment correlations occur when a child's genetically-shaped characteristics elicit certain types of physical and social environments. (Any example of a child's natural abilities or personality characteristics evoking certain reactions from parents.)

Active (niche-picking) genotype-environment correlations occur when children seek out environments that they find compatible or stimulating. (Any example of a child preferring and choosing certain settings, friends, and activities.)

126) The postpartum period generally lasts for about six weeks after birth—or until the mother's body has almost returned completely to a nearly pregnant state. During the postpartum period, the mother adjusts physically and psychologically to the process of childbearing.

127) At least one study has shown that less than half of women who experience postpartum depression seek help. For those that do, several antidepressant drugs have shown to be effective both for breastfeeding women and their newborns. Regular exercise may help to relieve the symptoms of postpartum depression. Psychotherapy has also been shown to benefit those suffering from postpartum depression.

128) Development is the result of an ongoing bidirectional interchange between heredity and the environment. Developmental outcome is not determined by a certain percentage of heredity and a certain percentage of environment. Genetic expression happens throughout the life span.

129) Germinal:

- takes place in first 2 weeks after conception
- includes creation of a zygote
- rapid cell division begins
- cell differentiation begins

Embryonic:

- occurs from 2 to 8 weeks after conception
- zygote attaches to the uterine wall
- rate of cell differentiation intensifies
- support systems for cells form
- organs appear
- endoderm, ectoderm, and mesoderm develop
- organogenesis occurs
- amnion, umbilical cord and placenta form and begin to function

Fetal:

- begins 2 months after conception and lasts for 7 months
- fetus becomes active, moving limbs, head, and opening and closing mouth
- face, forehead, eyelids, nose, and chin are distinguishable
- genitals can be identified as male or female (in most cases)
- rapid growth and weight gain
- prenatal reflexes become stronger
- skin structures form
- organ function intensifies
- fatty tissues develop

130) Endoderm: the inner layer of cells, which will develop into the digestive and respiratory systems

Ectoderm: the outermost layer, which will become the nervous system, sensory receptors (e.g., ear, nose, and eyes), and skin parts (e.g., hair and nails)

Mesoderm: the middle layer, which will become the circulatory system, bones, muscle, excretory system, and reproductive system

131) Ultrasound sonography: High-frequency sound waves are directed into the pregnant woman's abdomen to assess growth and development; can be given anytime during pregnancy.

Fetal MRI: This is used to diagnose fetal malformations. MRI (magnetic resonance imaging) uses a powerful magnet and radio waves to generate detailed images of the body's organs and structures. This provides more detailed images than ultrasound. In many instances, ultrasound will indicate a possible abnormality and fetal MRI will then be used to obtain a clearer, more detailed image. Among the fetal malformations that fetal MRI may be able to detect better than ultrasound sonography are certain central nervous system, chest, gastrointestinal, genital/urinary, and placental abnormalities.

Chorionic villus sampling: A small sample of the placenta is removed; done between the 10th and 12th week of pregnancy.

Amniocentesis: A sample of amniotic fluid is withdrawn by syringe to determine if any chromosomal or metabolic disorders are present in the developing fetus; done between the 15th and 18th weeks of pregnancy.

Maternal blood screening: Blood is drawn and tested to determine if the pregnancy has a higher risk for defects such as spina bifida and Down syndrome, as well as congenital heart disease risk for children. The test is given between the 16th and 18th week of pregnancy.

132) A teratogen is any agent that can cause a birth defect. Teratogens include, but are not limited to, nicotine, alcohol, heroin, caffeine, toxins (such as lead and various pollutants), cocaine, marijuana, some prescription and nonprescription drugs, infectious diseases, radiation, and others.

133) Dose: The greater the dose of a teratogenic agent, the greater its effect.

Genetic susceptibility: Genotypes of the woman and of the embryo or fetus influence the effect of a given teratogen.

Time of exposure: Teratogens do more damage at some points in development than others.

134) Fetal alcohol spectrum disorders are a cluster of abnormalities that appear in the offspring of mothers who drink alcohol heavily during pregnancy. Abnormalities include: (1) facial deformities, (2) defective limbs, face, and heart (3) learning problems, (4) below-average intelligence, (5) intellectual disability.

135) Nicotine use by the mother when pregnant can lead to the following problems in the fetus or infant: (1) respiratory problems, (2) ADHD, (3) low birth weight, (4) preterm births, (5) a higher incidence of fetal and neonatal deaths, and (6) a higher incidence of SIDS.

136) 1. During gestation across the placenta

2. During delivery through contact with maternal blood or fluids

3. After birth through breastfeeding

137) 1. Infected and symptomatic

2. Infected and asymptomatic

3. Not infected

138) 1. Radiation

2. Toxic wastes

3. Other chemical pollutants

139) 1. Exposure to radiation

2. Exposure to lead

3. Exposure to certain pesticides

4. Exposure to petrochemicals

5. Smoking

140) First stage:

–longest of the three stages

–uterine contractions begin

–cervix stretches and opens

Second stage:

–lasts an average of 45 minutes to one hour

–baby's head starts to move through the cervix and the birth canal

–baby completely emerges from the mother's body

Third stage (or afterbirth):

–shortest of the three stages

–placenta, umbilical cord, and other membranes are detached and expelled

141) If the baby is in a breech position, a cesarean delivery is usually performed because a breech birth can cause respiratory problems for the baby.

- 142) 1. Heart rate
2. Respiratory effort
3. Muscle tone
4. Body color
5. Reflex irritability

143) Low birth weight infants weigh less than 5½ pounds at birth. Preterm infants are those born three weeks or more before the pregnancy has reached full term (35 or fewer weeks after conception). Small for date infants may be preterm or full term and have a below-normal weight for their gestational age.

- 144) 1. Brain damage
2. Learning problems or disabilities
3. Attention hyperactivity deficit disorder
4. Autism spectrum disorders
5. Breathing problems

145) 1. Bonding is the formation of a connection between parent and newborn.
2. Sometimes hospital conditions can interfere with bonding (pain drugs that make the mother drowsy, separation of mother and newborn after delivery, preterm infants may be isolated from the mother, etc.).
3. Some physicians believe that parent and child need to form an emotional attachment shortly after birth in order for optimal development in years to come.
4. The extreme form of the bonding hypothesis—that a newborn absolutely must have close contact with the mother in the first few days of life to develop optimally—is simply not true.
5. Many hospitals offer rooming-in arrangements in which a baby can remain in the mother's room most of the time during its hospital stay.
