Difficulty: 03 Hard

Learning Objective: 02-01 Define and explain laissez-faire capitalism, the command system, and the market system.

6.

Award: 1.00 point

An economic system

- requires a grouping of private markets linked to one another.
- is a particular set of institutional arrangements and a coordinating mechanism used to respond to the economizing problem.
- requires some sort of centralized authority (such as government) to coordinate economic activity.
- is a plan or scheme that allows a firm to make money at some other firm's expense.

References

Multiple Choice

Difficulty: 03 Hard

Learning Objective: 02-01 Define and explain laissez-faire capitalism, the command system, and the market system.

7.

Award: 1.00 point

The term "laissez-faire" suggests that

- land and other natural resources should be privately owned, but capital should be publicly owned.
- land and other natural resources should be publicly owned, but capital should be privately owned.
- government should not interfere with the operation of the economy.
- government action is absolutely necessary if the economy is to achieve full employment and full production.

References

Multiple Choice *Difficulty: 03 Hard* *Learning Objective: 02-01 Define and explain laissez-faire capitalism, the command system, and the market system.*

8.

Award: 1.00 point

Economic systems differ according to which two main characteristics?

- who owns the factors of production and the methods used to coordinate economic activity
- the technology used in production and the quantity and quality of natural resources
- how goods are produced and who gets them
- the political system in place and the degree of scarcity facing the economy

References

Multiple Choice *Difficulty: 03 Hard* *Learning Objective: 02-01 Define and explain laissez-faire capitalism, the command system, and the market system.*

9.

Award: 1.00 point

Command systems are also known as

- market systems.
- pure capitalism.
- laissez-faire capitalism.
- communism.

References

Multiple Choice *Difficulty: 03 Hard*

Learning Objective: 02-01 Define and explain laissez-faire capitalism, the command system, and the market system.

10.

Award: 1.00 point

A fundamental difference between the command system and laissez-faire capitalism is that, in command systems,

- the division of output is decided by central planning rather than by individuals operating freely through markets.
- all economic decisions are made by the government, whereas there is no government in laissez-faire capitalism.
- scarcity does not exist, whereas it does in laissez-faire capitalism.
- money is not used, whereas it is in laissez-faire capitalism.

Learning Objective: 02-02 List the main characteristics of the market system.

12.

Award: 1.00 point

Which of the following is a fundamental characteristic of the market system?

- property rights
- central planning by government
- unselfish behavior
- government-set wages and prices

References

Multiple Choice

Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

13. Award: 1.00 point

Property rights are important because they

- ensure an equal distribution of income.
- encourage cooperation by improving the chances of mutually agreeable transactions.
- guarantee that any exchange will make all parties better off than prior to the exchange.
- allow the government to control how resources are allocated.

References

Multiple Choice *Difficulty: 01 Easy* *Learning Objective: 02-02 List the main characteristics of the market system.*

14. Award: 1.00 point

Private property

- discourages cooperation because people don't want to part with what they own.
- discourages innovation, as people are often afraid to risk losing their own property.
- encourages owners to maintain or improve their property to preserve or enhance value.
- does everything indicated by the other answers.

References

Multiple Choice *Difficulty: 01 Easy* *Learning Objective: 02-02 List the main characteristics of the market system.*

16. Award: 1.00 point

Freedom of enterprise

- is a characteristic that is common to most economic systems.
- in a market system means that entrepreneurs can obtain and use economic resources without any legal restraint.
- allows businesses, within broad limits, to choose what goods to produce.
- refers primarily to the right of consumers to purchase what they want.

References

Multiple Choice Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

17.

Award: 1.00 point

The main mechanism that regulates the market system is

- self-interest.
- private property.
- competition.
- freedom of enterprise and choice.

References

Multiple Choice

Difficulty: 01 Easy

18.

Award: 1.00 point

Broadly defined, competition involves

- private property and freedom of expression.
- independently acting buyers and sellers and freedom to enter or leave markets.
- increasing opportunity costs and diminishing marginal utility.
- capital goods and division of labor.

References

Multiple Choice

Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

19. Award: 1.00 point

Competition means that

- sellers can manipulate market price by causing product scarcities.
- there are independently acting buyers and sellers in each market.
- a product can be purchased at a number of different prices.
- there is more than one seller in a market.

References

Multiple Choice Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

20. Award: 1.00 point

The division of labor means that

- labor markets are geographically segmented.
- unskilled workers outnumber skilled workers.
- workers specialize in various production tasks.
- each worker performs a large number of tasks.

References

Multiple Choice Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

21.

Award: 1.00 point

Specialization in production is important primarily because it

- results in greater total output.
- allows society to avoid the coincidence-of-wants problem.
- allows society to trade by barter.
- allows society to have fewer capital goods.

References

Multiple Choice

Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

22.

Award: 1.00 point

Specialization—the division of labor—enhances productivity and efficiency by

- allowing workers to take advantage of existing differences in their abilities and skills.
- avoiding the time loss involved in shifting from one production task to another.
- allowing workers to develop skills by working on one, or a limited number, of tasks.
- all of the means identified in the other answers.

References

Multiple Choice

Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

23. Award: 1.00 point

Specialization in production is economically beneficial primarily because it

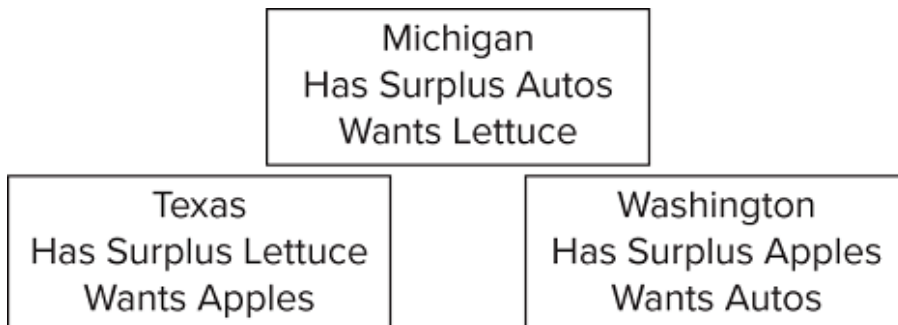

- allows everyone to have a job that he or she likes.
- permits the production of a larger output with fixed amounts of resources.
- facilitates trade by bartering.
- guarantees full employment.

References

Multiple Choice Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

24. Award: 1.00 point

On the basis of the information, and assuming trade occurs between the three states, we can expect

- Washington to exchange apples with Texas and receive money in return.
- Washington to exchange apples with Michigan and receive money in return.
- Texas to exchange lettuce with Michigan and receive autos in return.
- Texas to trade lettuce directly for Washington apples.

References

Multiple Choice Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

25. Award: 1.00 point

On the basis of the information, it can be said that

- no coincidence of wants exists between any two states.
- a coincidence of wants exists between Michigan and Washington.
- a coincidence of wants exists between Texas and Washington.
- a coincidence of wants exists between Michigan and Texas.

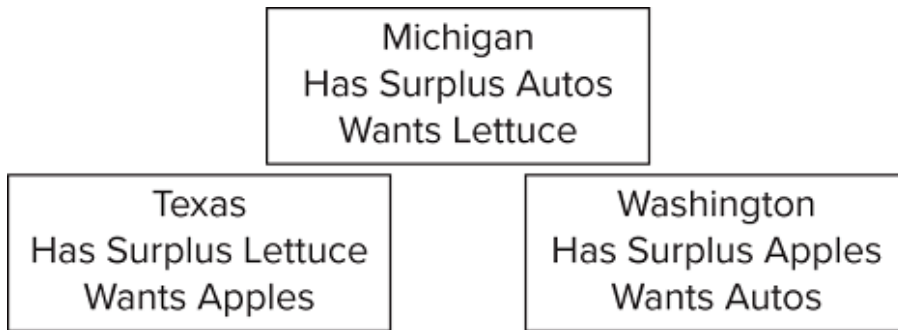

References

Multiple Choice

Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

26. Award: 1.00 point

Given the information, and assuming trade occurs between the three states, we can expect

- that there is no means by which Michigan can obtain lettuce while specializing in the production of autos.
- that money will not be needed to accomplish the desired exchanges.
- money to flow counter-clockwise from Michigan to Texas to Washington.
- money to flow clockwise from Michigan to Washington to Texas.

References

Multiple Choice

Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

27. Award: 1.00 point

Barter

- is the major means of exchange in centrally planned economies.
- accounts for over 30 percent of the dollar volume of all exchange in the U.S. economy.
- entails the exchange of goods for goods.
- is used to circumvent the problem of a lack of coincidence of wants among potential buyers and sellers.

References

Multiple Choice

Difficulty: 01 Easy

Learning Objective: 02-02 List the main characteristics of the market system.

28. Award: 1.00 point

The "coincidence of wants" problem associated with barter refers to the fact that

- for exchange to occur, each seller must have a product that some buyer wants.
- money must be used as a medium of exchange or trade will never occur.
- specialization is restricted by the size or scope of a market.
- buyers in resource markets and sellers in product markets can never engage in exchange.

References

Multiple Choice *Difficulty: 01 Easy* *Learning Objective: 02-02 List the main characteristics of the market system.*

29. Award: 1.00 point

The use of money contributes to economic efficiency because

- governmental direction of the production and distribution of output can be avoided by using money.
- roundabout production could not occur without the availability of money.
- it is necessary for the creation of capital goods.
- it promotes specialization by overcoming the problems with barter.

References

Multiple Choice *Difficulty: 01 Easy* *Learning Objective: 02-02 List the main characteristics of the market system.*

30. Award: 1.00 point

The presence of market failures implies that

- money is not an effective tool for exchange in a market system.
- there is an active role for government, even in a market system.
- individuals and firms should strive to be self-sufficient rather than specialize.
- command systems are superior to market systems in the allocation of resources.

44. Award: 1.00 point

In a market economy, the distribution of output will be determined primarily by

- consumer needs and preferences.
- the quantities and prices of the resources that households supply.
- government regulations that provide a minimum income for all.
- a social consensus as to which distribution of income is most equitable.

References

Multiple Choice *Difficulty: 02 Medium* *Learning Objective: 02-03 Explain how the market system answers the five fundamental questions of what to produce, how to produce, who obtains the output, how to adjust to change, and how to promote progress.*

45. Award: 1.00 point

The most efficient combination of resources in producing a given output is the combination that

- comes closest to using the same quantities of land, labor, capital, and entrepreneurial ability.
- minimizes the cost per unit of output.
- uses the smallest total quantity of all resources.
- conserves most on the use of labor.

References

Multiple Choice *Difficulty: 02 Medium* *Learning Objective: 02-03 Explain how the market system answers the five fundamental questions of what to produce, how to produce, who obtains the output, how to adjust to change, and how to promote progress.*

46. Award: 1.00 point

Firms are motivated to minimize production costs because

- it is the most environmentally friendly way to produce goods.
- least-cost production techniques use the smallest total quantity of resources.
- competitive pressures in the market will drive out higher-cost producers.
- the government provides tax credits and subsidies to low-cost producers.

References

Multiple Choice *Difficulty: 02 Medium* *Learning Objective: 02-03 Explain how the market system answers the five fundamental questions of what to produce, how to produce, who obtains the output, how to adjust to change, and how to promote progress.*

47.

Award: 1.00 point

Answer the question using the following data, which show all available techniques for producing 20 units of a particular commodity.

Resource	Resource prices	Possible Production Techniques				
		#1	#2	#3	#4	#5
Land	\$4	2	4	2	4	4
Labor	3	1	2	4	1	3
Capital	3	5	2	3	1	2
Entrepreneurial Ability	2	3	1	1	4	1

In view of the indicated resource prices, the economically most efficient production technique(s) is (are) technique(s)

- 1.
- 2 and 4.
- 3.
- 1 and 3.

References

Multiple Choice Difficulty: 02 Medium Learning Objective: 02-03 Explain how the market system answers the five fundamental questions of what to produce, how to produce, who obtains the output, how to adjust to change, and how to promote progress.

48. Award: 1.00 point

Answer the question using the following data, which show all available techniques for producing 20 units of a particular commodity.

Resource	Resource prices	Possible Production Techniques				
		#1	#2	#3	#4	#5
Land	\$4	2	4	2	4	4
Labor	3	1	2	4	1	3
Capital	3	5	2	3	1	2
Entrepreneurial Ability	2	3	1	1	4	1

Assuming the firm is motivated by self-interest and that the 20 units that can be produced with each technique can be sold for \$2 per unit, the firm will

- realize an economic profit of \$10.
- realize an economic profit of \$4.
- not earn any economic profit.
- shut down rather than incur a loss by producing.

References

Multiple Choice *Difficulty: 02 Medium* *Learning Objective: 02-03 Explain how the market system answers the five fundamental questions of what to produce, how to produce, who obtains the output, how to adjust to change, and how to promote progress.*

49. Award: 1.00 point

Answer the question using the following data, which show all available techniques for producing 20 units of a particular commodity.

Resource	Resource prices	Possible Production Techniques				
		#1	#2	#3	#4	#5
Land	\$4	2	4	2	4	4
Labor	3	1	2	4	1	3
Capital	3	5	2	3	1	2
Entrepreneurial Ability	2	3	1	1	4	1

If a new production technique is developed that enables a firm to produce 20 units of output with 3 units of land, 3 of labor, 1 of capital, and 2 of entrepreneurial ability, this technique would

- not be adopted because, although it reduces production costs, it does not increase profit.
- be adopted because it would lower production costs and increase economic profit.
- not be adopted because it entails higher production costs than other available techniques.
- be adopted, even though economic profits would be reduced slightly.

59. Award: 1.00 point

"Consumer sovereignty" refers to the

- fact that resource prices are higher than product prices in capitalistic economies.
- idea that the pursuit of self-interest is in the public interest.
- idea that the decisions of producers must ultimately conform to consumer demands.
- fact that a federal agency exists to protect consumers from harmful and defective products.

References

Multiple Choice Difficulty: 02 Medium Learning Objective: 02-03 Explain how the market system answers the five fundamental questions of what to produce, how to produce, who obtains the output, how to adjust to change, and how to promote progress.

60. Award: 1.00 point

The dollar votes of consumers ultimately determine the composition of output and the allocation of resources in a market economy. This statement best describes the concept of

- derived demand.
- consumer sovereignty.
- the invisible hand.
- market failure.

References

Multiple Choice Difficulty: 02 Medium Learning Objective: 02-03 Explain how the market system answers the five fundamental questions of what to produce, how to produce, who obtains the output, how to adjust to change, and how to promote progress.

61. Award: 1.00 point

Which of the following is not one of the five fundamental questions?

- What prices will be charged for goods and services?
- Who will get the goods and services?
- What goods and services will be produced?
- How will the system promote progress?

62. Award: 1.00 point

"Consumer sovereignty" means that

- buyers can dictate the prices at which goods and services will be offered.
- advertising is ineffective because consumers already know what they want.
- buyers control the quality of goods and services through regulatory agencies.
- buyers determine what will be produced based on their "dollar votes" for the goods and services offered by sellers.

63. Award: 1.00 point

Which of the following best describes the invisible-hand concept?

- The desires of resource suppliers and producers to further their own self-interest will automatically further the public interest.
- The inability to substitute resources creates a conflict between private and public interests and calls for government intervention.
- The market system is the best system for overcoming the scarce resources-unlimited wants problem.
- Central direction by the government will improve resource allocation in a capitalistic economy.

References

Multiple Choice Difficulty: 02 Medium Learning Objective: 02-04 Explain the operation of the "invisible hand."

64. Award: 1.00 point

The invisible hand refers to the

- fact that the U.S. tax system redistributes income from rich to poor.
- notion that, under competition, decisions motivated by self-interest promote the social interest.
- tendency of monopolistic sellers to raise prices above competitive levels.
- fact that government controls the functioning of the market system.

References

Multiple Choice Difficulty: 02 Medium Learning Objective: 02-04 Explain the operation of the "invisible hand."

65. Award: 1.00 point

The invisible hand concept suggests that

- market failures imply the need for a national economic plan.
- big businesses are inherently more efficient than small businesses.
- the competitiveness of a capitalistic market economy invariably diminishes over time.
- assuming competition, private and public interests will coincide.

References

194. Award: 1.00 point

The major "success indicator" for business managers in command economies like the Soviet Union and China in the past was

- the quantity or volume of production.
- product quality and variety.
- the amount of profits a producer makes.
- morale of workers in a firm.

References

Multiple Choice *Difficulty: 02 Medium* *Learning Objective: 02-04 Explain the operation of the "invisible hand."*

195. Award: 1.00 point

A characteristic of centrally planned economies is that

- the price is relatively unimportant in allocating resources.
- profits are the main measure of success of a firm.
- entrepreneurship is quite prevalent and highly rewarded.
- there are many incentives for innovation and hard work.

References

Multiple Choice *Difficulty: 02 Medium* *Learning Objective: 02-04 Explain the operation of the "invisible hand."*

196. Award: 1.00 point

Which of the following is true of an economy that operates entirely through central planning?

- An individual's success in business is based on political savvy rather than economic profitability.
- There is relative ease in matching resource allocation to consumer demand by the central planners.
- Central planners receive market information and coordinate economic activity through the price mechanism.
- The system adapts easily to technological change, because there is a healthy entrepreneurial spirit.

Learning Objective: 02-02 List the main characteristics of the market system.

263. Award: 1.00 point

Why is the right of private property an essential characteristic of a market system?

This right of private property, along with the freedom to negotiate binding legal contracts, enables individuals and businesses to obtain, use, and dispose of property resources as they see fit. Property rights encourage investment, innovation, maintenance of property, and economic growth. Nobody would stock a store, build a factory, or clear land for farming if someone else, or the government, could take it away. Also, property rights encourage owners to maintain or improve their property to preserve or increase its value. Finally, property rights enable people to use their time and resources to produce more goods and services, rather than having to use them to protect and retain the property they already own.

Essay

Difficulty: 02 Medium

Learning Objective: 02-02 List the main characteristics of the market system.

264. Award: 1.00 point

What role does freedom play in capitalism? How important is it to the operation of a competitive market economy?

Within legal limitations, freedom of enterprise and freedom of choice play a role in capitalism. Freedom of enterprise is important because it ensures that entrepreneurs and private businesses are free to obtain and use economic resources to produce their choice of goods and services and to sell them in their chosen markets. Freedom of choice is important because it allows owners to employ or dispose of their property and money as they see fit. It also allows workers to try to enter any line of work for which they are qualified. Finally, it ensures that consumers are free to buy the goods and services that best satisfy their wants and that their budgets allow.

Explain the importance of self-interest in the operation of a market system.

Self-interest is important because it is the motivating force in a market system. Self-interest simply means that each economic unit tries to achieve its own particular goal. Entrepreneurs try to maximize profit or minimize loss. Property owners try to get the highest price for the sale or rent of their resources. Workers try to maximize their utility (satisfaction) by finding jobs that offer the best combination of wages, hours, benefits, and working conditions. Consumers try to obtain products at the lowest possible price. Self-interest provides direction and consistency to what might otherwise be a chaotic economy.

What conditions are necessary for economic competition to exist?

Broadly defined, competition requires two or more buyers and two or more sellers acting independently in a particular product or resource market. (Usually there are many more than two buyers and two sellers.) Also, necessary is the freedom of sellers and buyers to enter or leave (exit) markets, based on their economic self-interest.

Describe two types of specialization in production.

One type of specialization is human specialization, which is sometimes referred to as the division of labor. This means the work required to produce a product has been divided into a number of different tasks. Then the workers that are best suited to each task will be assigned to it. Geographic specialization works on a regional or international basis when producers concentrate on producing only one or a few products that they are best suited for and exchanging their surplus to another region that has also specialized in production that they are best suited for. Both kinds of specialization increase efficiency in the use of limited resources.

Describe three ways that human specialization contributes to society's output.

Human specialization makes use of differences in abilities, which means that individuals can take advantage of the differences in their abilities and skills; fosters learning by doing, which means that as individuals devote time to a single task, they develop the skills required; and saves time, which means that as a person devotes time to a single task, that person avoids the loss of time incurred in shifting from one job to another.

What advantage does a money economy have over a barter economy?

In economies where people use money as the medium of exchange, trade is easier. Money is a convenient social invention that facilitates the exchange of goods and services. To serve as money, an item needs to pass only one test: Sellers must be willing to accept it as payment for their goods and services. Barter is the direct exchange of one good or service for another good or service. This is a problem because it requires a coincidence of wants between the buyer and the seller, the seller has to have what the buyer wants and the buyer has to have what the seller wants; if this coincidence of wants is missing, no trade takes place.

What are the Five Fundamental Questions that every economy must answer?

There are five fundamental questions that every economy must answer. What goods and services will be produced? How will the goods and services be produced? Who will get the output? How will the system accommodate change? How will the system promote progress?

How does 'consumer sovereignty' determine the types and quantities of the goods produced in an economy?

Consumers register their preferences for the type and quantity of goods and services they want in the market when they buy something. The dollars spent are like voting for that product to continue to be produced. If the dollar votes for a certain product are great enough to create a profit, businesses will produce and sell that product. In contrast, if the dollar votes do not create sufficient revenues to cover costs, businesses will not produce the product. Thus, consumers collectively direct resources to industries that are meeting their wants and away from industries that are not meeting their wants.

Adam Smith in his 1776 book *The Wealth of Nations* describes the concept of "an invisible hand." Explain what he means by an "invisible hand."

Firms and resource suppliers, seeking to further their own self-interests and operating within the framework of a highly competitive market system, will simultaneously, as though guided by an "invisible hand," promote the public interest. Firms and resource suppliers have their own interests in mind, but competition forces them to consider other people's interests. The invisible hand of competition ensures that when firms maximize their own profits and resource suppliers maximize their own incomes, they also help to maximize society's output and income.

Describe the three major virtues of a market system.

The three major virtues of the market system are efficiency, incentives, and freedom. Efficiency is realized as the market system promotes the efficient use of resources by guiding them into the production of the goods and services most wanted by society. It encourages the development and adoption of new and more efficient production techniques. Incentives found in the market system encourage skill acquisition, hard work, innovation, and entrepreneurship. Greater work skills and effort mean greater production and higher incomes, which usually translate into a higher standard of living. Successful innovations generate economic rewards. Lower-cost production raises profits while freeing up resources to be used elsewhere. Freedom is the major noneconomic argument for the market system in its emphasis on personal freedom. Unlike central planning, the market system coordinates economic activity without coercion. Entrepreneurs and workers are free to further their own self-interest, subject to the rewards and penalties imposed by the market system itself.

What are the two main problems that have caused the demise of the command systems?

The first difficulty was the coordination problem. The central planners had to coordinate the millions of individual decisions by consumers, resource suppliers, and businesses. A lack of a reliable success indicator added to the coordination problem in the Soviet Union and China prior to its market reforms. The command economies also faced an incentive problem. Central planners determined the output mix. When they misjudged how many automobiles, shoes, shirts, and chickens were wanted at the government-determined prices, persistent shortages and surpluses of those products arose. Thus, many products were unavailable or in short supply, while other products were overproduced and sat for months or years in warehouses.

(Consider This) Explain the differences in economic systems between North and South Korea and the economic outcomes of the two systems.

North Korea, under the influence of the Soviet Union, established a command economy that emphasized government ownership and central government planning. South Korea, protected by the United States, established a market economy based upon private ownership and the profit motive. Today, South Korea is far more prosperous, with South Koreans enjoying an average annual income (GDP per capita) of \$39,500 per year versus \$1,700 in North Korea. That differential is especially startling when you find out that North Korea was richer and more highly industrialized when the countries were separated in 1953.

What is the relationship between businesses and households in the circular flow diagram?

Households buy the goods and services that businesses make available in the product market. Households obtain the income needed to buy those products by selling resources in the resource market. Businesses sell goods and services in the product market in order to obtain revenue, and they incur costs in the resource market when they purchase the labor, land, capital, and entrepreneurial ability that they need to produce their goods and services.

Explain the main characteristics of a corporation.

A corporation is an independent legal entity that can, on its own behalf, acquire resources, own assets, produce and sell products, incur debts, extend credit, sue and be sued, and otherwise engage in any legal business activity. The fact that a corporation is an independent legal entity means that its owners bear no personal financial responsibility for the corporation's debts and obligations. For instance, if a corporation has failed to repay a loan to a bank, the bank can sue the corporation but not its owners. Professional managers run most corporations. They are hired and supervised by a board of directors that is elected annually by the corporation's owners.

Discuss the benefits of restricting business risk to the owners.

Many people deeply dislike risk and would not be willing to participate in a business venture if they were exposed to the possibility of losing money. Many workers just want to do their jobs and get paid twice a month without having to worry about whether their employer is doing well or not. The same is true for most suppliers, whose only concern is receiving full and prompt payment for the inputs they supply to businesses. This makes it much easier for firms to attract labor and other inputs, which in turn helps the economy innovate and grow. The profit system helps to achieve prudent risk management by focusing owners on the responsibility and the rewards for successfully managing risk. Owners can provide the risk-managing input of entrepreneurial ability themselves or hire it by paying a skilled manager. But either way, some individual's full-time job includes the specialized task of managing business risk.
