

**MULTIPLE CHOICE - Choose the one alternative that best completes the statement or answers the question.**

- 1) Who is not counted in the U.S. labor force?
- A) a person working 15 hours a week or more, not for pay
  - B) a full-time college student
  - C) a person working at least one hour for pay per week
  - D) someone actively looking for a job
  - E) a 70-year-old person who supplements his Social Security payments by working eight hours each week at the minimum wage

5) How does the presence of an underground labor market bias the government's calculation of the labor force participation rate?

A) The official government statistic on labor force participation is too low because people working in the underground labor market should be counted as being in the labor market and employed.

B) The official government statistic on labor force participation is too high because people working in the underground labor market should be counted as being in the labor market but unemployed.

C) The official government statistic on labor force participation is too low because people working in the underground labor market should not be counted as being in the labor market.

D) The official government statistic on labor force participation is too high because people working in the underground labor market should not be counted as being in the labor market.

E) The official government statistic on labor force participation is identical to actual labor market participation whether or not there is an underground labor market.

7) Which of the following best describes the historical pattern in the average number of hours worked per week in the United States when the large drop during the Great Depression is ignored?

A) Average hours decreased from 60 hours per week in 1900 to 40 hours per week in 1960, with average hours holding steady since 1960.

B) Average hours have been consistently between 35 and 40 hours from 1900 through 2010.

C) Average hours increased from 25 hours per week on average in 1900 to over 40 hours per week in 2010.

D) Average hours constantly fell from about 55 hours per week in 1900 to about 33 hours per week in 2010.

E) Average hours held constant at 50 hours per week from 1900 through 1960; since 1960 average hours have consistently fallen to just under 25 hours per week in 2010.
