

Chapter 2 - Information Systems in Organizations

True / False

1. While information systems were once primarily used to automate manual processes, they have transformed the nature of work and the shape of organizations themselves.

- a. True
- b. False

ANSWER: True

2. An organization's structure is independent of its goals and approach to management.

- a. True
- b. False

ANSWER: False

3. Suppose a retail business has an unwritten rule that "every sales person cooperates with others." This is an example of organizational culture.

- a. True
- b. False

ANSWER: True

4. Reengineering and continuous improvement have the same definition.

- a. True
- b. False

ANSWER: False

5. Organizations cannot have many value chains.

- a. True
- b. False

ANSWER: False

6. A sustaining innovation is one that initially provides a lower level of performance than the marketplace has grown to accept.

- a. True
- b. False

ANSWER: False

7. The concept of a value chain is not significant to organizations unless they manufacture products.

- a. True
- b. False

ANSWER: False

8. A traditional view of information systems holds that organizations use them to control and monitor processes and ensure effectiveness and efficiency.

- a. True
- b. False

ANSWER: True

Chapter 2 - Information Systems in Organizations

9. Over time, disruptive innovation tends to become less attractive to users in a new market.

- a. True
- b. False

ANSWER: False

10. Perceived usefulness and ease of use of a system influence an individual's attitude toward the system.

- a. True
- b. False

ANSWER: True

11. The diffusion of innovation theory states that adoption of any innovation happens all at once for all members of the targeted population.

- a. True
- b. False

ANSWER: False

12. The diffusion of innovation theory can be useful in planning the rollout of a new information system.

- a. True
- b. False

ANSWER: True

13. The activities that lead to getting the right product into the right consumer's hands in the right quantity at the right time at the right cost are known as value chain management.

- a. True
- b. False

ANSWER: False

14. Opportunities in information systems are available to people from different parts of the world.

- a. True
- b. False

ANSWER: True

15. The role of a systems analyst is narrowly defined and seldom involves communications with others.

- a. True
- b. False

ANSWER: False

16. The information systems operations group is responsible for the day-to-day running of IS hardware to process the organization's information systems workload.

- a. True
- b. False

ANSWER: True

Chapter 2 - Information Systems in Organizations

17. When an organization hires another firm in another country to perform a specific function on its behalf, it is known as offshoring.

- a. True
- b. False

ANSWER: True

18. The successful implementation for change only happens when people accept the need for change and believe that it will improve factors such as productivity and/or customer satisfaction.

- a. True
- b. False

ANSWER: True

19. "Adapting" is the second stage in Lewin's Change Model, which involves learning new work methods, behaviors, and systems.

- a. True
- b. False

ANSWER: False

20. According to Lewin's Change Model, an organization must deliberately change old habits, learn new work methods, and accept the new work methods as parts of the job.

- a. True
- b. False

ANSWER: True

21. Suppose an organization wishes to change for the better. It can accomplish that just by changing people's roles, responsibilities, and lines of authorities.

- a. True
- b. False

ANSWER: False

22. When organizational learning occurs, what is revealed can be small, incremental adjustments known as continuous improvement.

- a. True
- b. False

ANSWER: True

23. Today, many organizations can function and compete effectively without computer-based information systems.

- a. True
- b. False

ANSWER: False

24. For someone to be a good CIO, technical ability is the most important characteristic.

- a. True
- b. False

ANSWER: False

Chapter 2 - Information Systems in Organizations

25. One of the primary roles of a senior IS manager is to communicate with other areas of the organization to determine changing business needs.

- a. True
- b. False

ANSWER: True

Multiple Choice

26. Providing value to a _____ is the primary goal of any organization.

- a. stakeholder
- b. product
- c. competitor
- d. service

ANSWER: a

27. In a manufacturing organization, the supply chain is a key value chain whose primary activities include all of the following EXCEPT:

- a. inbound logistics
- b. finance and accounting
- c. marketing and sales
- d. customer service

ANSWER: b

28. The idea of _____ is a form of innovation that constantly seeks ways to improve business processes and add value to products and services.

- a. reengineering
- b. process redesign
- c. disruptive change
- d. continuous improvement

ANSWER: d

29. The performance levels of radically new 'high-tech' products usually improve with newer versions. Such types of products are known as

- a. sustaining innovations
- b. continuous improvement
- c. disruptive innovations
- d. business reengineering

ANSWER: c

30. _____ involves reducing the number of employees to cut costs.

- a. Outsourcing
- b. Offshoring
- c. Utility computing
- d. Downsizing

ANSWER: d

31. Which of the following theories explains how a new idea or product gains acceptance and spreads through a specific population or subset of an organization?

- a. diffusion of innovation theory
- b. contingency theory
- c. public choice theory
- d. two-factor theory

ANSWER: a

Chapter 2 - Information Systems in Organizations

32. In a supply chain, _____ involve the transformation, movement, and storage of supplies and raw materials.
- a. virtual flows
 - b. matrix flows
 - c. information flows
 - d. physical flows

ANSWER: d

33. _____ is a visa program that allows skilled employees from foreign lands into the United States.
- a. L-1B
 - b. H-1B
 - c. 4F
 - d. G-5

ANSWER: b

34. _____ are responsible for running and maintaining information system equipment and also for scheduling, hardware maintenance, and preparing input and output.
- a. Data-entry operators
 - b. System operators
 - c. Web operators
 - d. Local area network operators

ANSWER: b

35. _____ encompasses all the activities required to get the right product into the right consumer's hands in the right quantity at the right time and at the right cost, from acquisition of raw materials through customer delivery.
- a. Supply chain management
 - b. Value chain management
 - c. Inventory management
 - d. Customer management

ANSWER: a

36. In the contemporary view of information systems, they are considered an integral part of the supply chain management process mainly because they: _____.
- a. aid in product transformation
 - b. are a means of producing output
 - c. are a means of providing input into the process
 - d. all of these

ANSWER: d

37. Suppose you are assigned to manage a virtual team. Which of the following will you NOT do?
- a. define goals, and set expectations
 - b. be aware of team members cultural sensitivity
 - c. ensure the team members are familiar with each other at a personal level
 - d. hold team meetings regularly - whether the team members like it or not

ANSWER: d

38. All of the following are potential drawbacks to outsourcing EXCEPT:
- a. loss of flexibility and control
 - b. low employee morale
 - c. greater focus on core business
 - d. potential for data breaches

ANSWER: c

Chapter 2 - Information Systems in Organizations

39. Suppose, you need to advise someone about getting a certification. Which of the following will be appropriate advice?

- a. Getting certification is a sure way of improving your income
- b. Certifications are vendor-specific
- c. Certifications are the same as courses offered at universities
- d. You need a college degree before you can take a certification exam

ANSWER: b

40. All of the following are positive driving forces that influence change according to Lewin's Theory of Force Field Analysis, EXCEPT:

- a. beliefs
- b. past performance
- c. expectations
- d. cultural norms

ANSWER: b

41. According to the diffusion innovation theory, _____ are the risk takers, always the first to try new products and ideas.

- a. early majority
- b. late majority
- c. early adopters
- d. innovators

ANSWER: d

42. Which of the following is NOT one of the four main components in Leavitt's Diamond?

- a. people
- b. systems
- c. tasks
- d. technology

ANSWER: b

43. The members of an organization who are most likely to contribute to organizational learning are _____.

- a. hourly employees
- b. mid-level managers
- c. executives
- d. all of these

ANSWER: d

44. Positive outcomes of continuous improvement include _____.

- a. increased customer loyalty
- b. increased customer satisfaction
- c. protection against competitors
- d. all of these

ANSWER: d

45. According to Lewin and Schein's 3-stage model of organizational change, which of the following tasks would be found in the 'unfreezing' stage?

- a. Monitor progress against success criteria
- b. Establish controls to ensure change is occurring
- c. Establish processes and systems to institutionalize change
- d. Assign leaders and implementation team

ANSWER: d

Chapter 2 - Information Systems in Organizations

46. Suppose you work at a business unit that has group of people who would rather wait to try a new technique. They listen to and follow the opinion leaders. They would be classified as the _____.

- a. innovators
- b. early adopters
- c. early majority
- d. late majority

ANSWER: c

47. Which of the following is NOT a potential drawback to downsizing?

- a. reduced payroll costs
- b. decreasing employee morale
- c. lower quality
- d. none of these

ANSWER: a

48. You might be an information systems worker if you _____.

- a. prefer a slow-paced environment, where technology rarely changes
- b. prefer to work only on the computer and are not interested in the business
- c. enjoy learning new techniques and enjoy working with people
- d. are good in book-keeping, like an accountant

ANSWER: c

49. In most large organizations, the IS department is divided into the following functions _____.

- a. operations and development
- b. operations, development, and support
- c. operations and support
- d. systems, operations, and development

ANSWER: b

50. Important functions of the chief information officer include

- a. employing an IS department's equipment and staff to help the organization reach its goals
- b. monitoring the financial considerations of the IS department, such as return on investment
- c. ensuring the organization complies with laws and regulations
- d. all of these

ANSWER: d

51. In a large IS organization, the professional who is responsible for maintaining the security and integrity of the organization's systems and data is _____.

- a. the data center manager
- b. the data security manager
- c. the system security operator
- d. the information systems security analyst

ANSWER: d

52. Which of the following is NOT a task typically associated with the systems analyst role?

- a. conveying system requirements to software developers and network architects
- b. troubleshooting problems after implementation
- c. collaborating with others to build a software product from scratch
- d. choosing and configuring hardware and software

ANSWER: c

Chapter 2 - Information Systems in Organizations

53. One method an IS professional might use to find a new job would be _____.
- seeking referrals from colleagues, friends, and family members
 - searching and applying for open positions on Internet job sites
 - networking through an IS professionals' organization
 - all of these

ANSWER: d

Completion

54. A manufacturing facility has a series of activities that converts the raw materials into valuable products. Such a series of activities make up the organization's _____ chain.

ANSWER: value

55. A(n) _____ is a group of individuals whose members are distributed geographically, but who collaborate and complete work through the use of information systems technology.

ANSWER: virtual team

56. In any organization, _____ such as raw materials, labor, facilities, equipment, and knowledge, are needed to transform them to outputs in a way that increases the input's value.

ANSWER: inputs

57. The radical redesign of business processes, organizational structures, information systems, and values of an organization to achieve a breakthrough in business results is known as _____.

ANSWER: reengineering

58. _____ is a set of major understandings and assumptions shared by a group, such as within an ethnic group or country.

ANSWER: Culture
culture

59. _____ is a theory that proposes that every organizational system is made up of four main components—people, tasks, structure, and technology—with an interaction among the four components so that any change in one of these elements will necessitate a change in the other three elements.

ANSWER: Leavitt's diamond

60. The attitude towards using an information system depends on its perceived ease-of-use and perceived _____.

ANSWER: usefulness

61. In the technology acceptance model (TAM), _____ is defined as the degree to which individuals believe that use of the system will improve their performance.

ANSWER: perceived usefulness

62. _____ means the ability of a product or a service to meet or exceed customer expectations.

ANSWER: Quality
quality

Chapter 2 - Information Systems in Organizations

63. _____ refers to organizational subunits and the way they relate to the overall organization.

ANSWER: organizational structure
Organizational structure

64. _____ is a long-term business arrangement in which a company contracts for services with an outside organization that has expertise in providing a specific function.

ANSWER: Outsourcing
outsourcing

65. Sarah, as the head of a business division, wants to set up a network access account for a new employee. She should call the _____ to get this done.

ANSWER: LAN administrator or
Network administrator

66. A(n) _____ is a professional in a developmental group of an information systems department who assists in choosing and configuring hardware and software, matching technology to users' needs, monitoring and testing the system in operation, and troubleshooting problems after implementation.

ANSWER: systems analyst

67. _____ design and set up databases to meet an organization's needs.

ANSWER: Database administrators
DBAs
database administrators

68. The _____ group of a typical information systems organization is responsible for the day-to-day running of IS hardware to process the organization's information systems workload.

ANSWER: operations

69. _____ convert a program design developed by a systems analyst or software developer using one of many computer languages.

ANSWER: Programmers
programmers

70. _____ is a process for testing skills and knowledge, which results in a statement by the certifying authority that confirms an individual is capable of performing particular tasks.

ANSWER: Certification
certification

71. Process redesign, which is also known as _____, involves the radical redesign of business processes, organizational structures, information systems, and values.

ANSWER: business process reengineering

72. "Kaizen" is the Japanese word for _____.

ANSWER: continuous improvement

73. The _____ theory was developed by E.M. Rogers to explain how a new idea or product gains acceptance and diffuses (or spreads) through a specific population or subset of an organization.

ANSWER: diffusion of innovation

Chapter 2 - Information Systems in Organizations

74. The first stage of Lewin's change model, _____, means ceasing old habits and creating a climate that is receptive to change.

ANSWER: unfreezing

75. _____ is an outsourcing arrangement where the organization providing the service is located in a country different from the firm obtaining the services.

ANSWER: Offshore outsourcing
offshoring

76. According to Leavitt's theory, _____ in one aspect of the information system element will necessitate changes in other elements also.

ANSWER: change

77. A local pizzeria that has been around for more than forty years, keeps adjusting to new conditions and altering their practices. Such behavior is known as _____.

ANSWER: organizational learning

78. Laptops are a good example of _____ because they are gradually displacing desktop computers due to new and better performance characteristics.

ANSWER: disruptive innovation

79. Of the five categories of innovation adopters, _____ are always the first to try new products and ideas.

ANSWER: innovators

80. _____ is the term used to describe the information systems and solutions built and deployed by departments other than the information systems department.

ANSWER: Shadow IT
shadow IT
Shadow Information Technology
shadow information technology

Essay

81. Define the term value chain and briefly discuss the purpose of the supply chain component in a manufacturing organization.

AN The value chain is a series (chain) of activities that an organization performs to transform inputs into outputs in such a SW way that the value of the input is increased. In a manufacturing organization, the supply chain is a key value ER chain whose primary activities include inbound logistics, operations, outbound logistics, marketing and sales, and : service. These primary activities are directly concerned with the creation and/or delivery of the product or service. There are also four main areas of support activities, including technology infrastructure, human resource management, accounting and finance, and procurement.

Chapter 2 - Information Systems in Organizations

82. Explain the difference between sustaining and disruptive innovation.

AN Sustaining innovation results in enhancements to existing products, services, and ways of operating. Such innovations *SW* are important as they enable an organization to continually increase profits, lower costs, and gain market share. A *ER* disruptive innovation is one that initially provides a lower level of performance than the marketplace has grown to accept. Over time, however, the disruptive innovation is improved to provide some new performance characteristics and becomes more attractive to users in a new market. As it continues to improve and begins to provide a higher level of performance, it eventually displaces the former product or way of doing things.

83. Explain the concept of "perceived usefulness" in the context of technology acceptance model (TAM).

AN In the TAM model, "perceived usefulness" is defined as the degree to which individuals believe that use of a system *SW* will improve their performance. The perceived ease of use is the degree to which individuals believe that the system *ER* will be easy to learn and use. Both the perceived usefulness and ease of use can be strongly influenced by the expressed opinions of others who have used the system and the degree to which the organization supports use of the system (e.g., incentives, offering training and coaching from key users). Perceived usefulness and ease of use in turn influence an individual's attitude toward the system, which affect their behavioral intention to use the system.

84. Discuss the roles, functions, and careers in information systems (IS).

AN Information systems (IS) offer many exciting and rewarding careers. Professionals with careers in information *SW* systems can work in an IS department or outside a traditional IS department as Web developers, computer *ER* programmers, systems analysts, computer operators, and many other positions. There are also opportunities for IS professionals in the public sector. In addition to technical skills, IS professionals need skills in written and verbal communication, an understanding of organizations and the way they operate, and the ability to work with people and in groups. Most medium to large organizations manage information resources through an IS department. In smaller businesses, one or more people might manage information resources, with support from outsourced services.

85. Describe both of Lewin's theories—change model and force field analysis—and explain how they are related.

AN Lewin's change model proposes that organizational change goes through three stages: Unfreezing, which means *SW* ceasing old habits and creating a climate that is receptive to change; moving, which involves learning new work *ER* methods, behaviors, and systems; and refreezing, which involves reinforcing changes to make the new process accepted. Lewin went on to identify two types of forces that can influence these stages, which are explained in his theory of force field analysis. Driving (positive) forces are beliefs, expectations, and cultural norms that encourage change, while restraining (negative) forces make change difficult to accept or implement.
