Essay

1. Discuss the issue of drug testing for welfare recipients. Is drug testing an appropriate action for social aid? Why or why not? What could be the consequences of such a policy? What other issues can affect the solutions and/or the problems related to social welfare?
Ans: Varies. Students should point out some of the following: According to the authors: In 2017, at least 15 states passed legislation to require drug testing or screening for public assistance applicants or recipients and at least 20 more states proposed similar legislation during the year Opponents of this policy argue that punitive testing policies perpetuate the stereotype that people on public assistance are morally corrupt and more likely to use drugs. It also distracts from the need for access to drug treatment and prevention. A 2012 assessment of the Florida welfare drug test law revealed that there were no direct savings for the state; contrary to the laws intent, it did not identify many drug users and had no effect on reducing the number of individuals applying for welfare assistance. The Florida law that was struck down by federal appeals court in 2014; the court ruled that the state failed to demonstrate that drug abuse was more prevalent or unique among TANF clients than in the general population.

2. Discuss how poverty plays a role in political decision-making. Why are the poor least likely to control opportunities? What are the issues that you feel are most important to the topic? Discuss how you can affect poverty as an individual in our culture.
Ans: Varies. Students should point out some of the following: . The poor are the least likely to control opportunities because they are themselves in need of them. Power matters when the group has the ability to control strategic resources and

opportunities to attain such resources. Money, land, information, and skills are strategic resources when they are needed by individuals to do what they want to do. In the textbook, distributed power is limited to elite group of individuals whose economic political and social relationships are closely interrelated, according to William Domhoff. Control over four major social networks—economic, political, military, and religious—can be turned into a strong organizational basis for wielding power. So there really is no power for the poor because they don't have control over the social networks. Conflict theorists assert that poverty exists because those in power want to maintain and expand their base of power and interests, with little left to share with others. Welfare bureaucracies—local, state, and national—represent important interest groups that influence the creation of implementation of welfare policies. According to the textbook, Fox, Piven, and Cloward conclude that the principal function of welfare is to allow the capitalist class to maintain control over labor. Welfare policy has been used by the state to stifle protest and to enforce submissive work norms. During periods of economic crisis, the state expands welfare rolls to pacify the poor and reduce the likelihood of serious uprising. The most effective manner in which an individual can affect poverty in our culture is by political action groups. These political action groups are needed to put social pressure on issues and promote activism.

3. Identify and describe two consequences of poverty mentioned in the reading.
Ans: Varies. Students should point out some of the following: the text identifies food insecurity and housing, defining food insecurity as "food insufficient for all family members to enjoy active and healthy lives for at least some time during the year." Text also mentions a variety of reasons why poor families encounter higher food prices and a smaller selection of food than other families. Housing is another problem; the combination of low earnings and scarce housing assistance results in serious housing problems for the working poor.
