

# Chapter 02 Test Bank

Student: \_\_\_\_\_

1.  
Approximately how much of the world's output does the United States produce?
  - A. 5 percent.
  - B. 17 percent.
  - C. 30 percent.
  - D. 12 percent.
  
2. The United States has roughly how much of the world's population?
  - A. 5 percent.
  - B. 10 percent.
  - C. 15 percent.
  - D. 20 percent.
  
3. The United States has roughly how much of the world's arable land?
  - A. 14 percent.
  - B. 12 percent.
  - C. 10 percent.
  - D. 8 percent.
  
4. The best definition of GDP is
  - A. The sum of the physical amounts of goods and services in the economy.
  - B. A dollar measure of final output produced during a given time period within a nation's borders.
  - C. A measure of the per capita economic growth rate of the economy.
  - D. A physical measure of the capital stock of the economy.
  
5.  
The measure of final goods and services produced in the United States is the
  - A. GDP of the United States.
  - B. Percentage change in the GDP of the United States.
  - C. Per capita GDP in the United States.
  - D. Total sales of all goods during the year.
  
6. Approximately how much of the world's output does China produce?
  - A. 13 percent.
  - B. 0 percent.
  - C. 9 percent.
  - D. 1.5 percent.
  
7. China has roughly how much of the world's population?
  - A. 10 percent.
  - B. 20 percent.
  - C. 30 percent.
  - D. 40 percent.

8. Which of the following countries (or regions) produces the most output annually?
- A. Japan.
  - B. United States.
  - C. China.
  - D. Germany.
9. Which of the following statements is true about the U.S. economy?
- A.
- The United States produces nearly one-fifth of the world's production.
- B. The United States has the world's third largest economy.
- C. The United States produces less than half as much as China does.
- D. The United States produces less than one-third as much as Japan does.
10. Per capita GDP is
- A. The sum of consumer goods, investment goods, government services, and net exports.
  - B. A dollar measure of the economic growth rate of a country.
  - C. The value of the factors of production used to produce output in a country.
  - D.
- The dollar value of GDP divided by total population.
11. Average GDP per person is
- A. Also known as GDP.
  - B. Also known as per capita GDP.
  - C. The value of the factors of production used to produce output in a country.
  - D. A measure of the economic growth rate of a country.
12. Which of the following is an indicator of how much output the average person would get if all output were divided up evenly among the population?
- A. GDP.
  - B.
- Economic growth.
- C. Per capita GDP.
- D. Real GDP.
13. Those who are interested in assessing the relative standard of living of different countries over a given time period are most likely to look at
- A. GDP.
  - B. Percentage change in GDP.
  - C. Population.
  - D. Per capita GDP.
14. The best measure of how much output the average person would get if all output were divided evenly among the population would be
- A. GDP.
  - B. The economic growth of the economy.
  - C. Per capita GDP.
  - D. The capital stock of the economy.
15. Average living standards are best measured using
- A. GDP.
  - B. The economic growth of the economy.
  - C. Per capita GDP.
  - D. The capital stock of the economy.
16. What percentage of the world's population subsists on incomes of less than \$2 a day?
- A. 33 percent.
  - B. 50 percent.
  - C. 60 percent.
  - D. 70 percent.

17. Per capita GDP will rise if GDP
- A. Increases more rapidly than the population increases.
  - B. Increases at the same rate as the population increases.
  - C. Decreases and the population increases.
  - D. Increases more slowly than the population increases.
18. Per capita GDP will definitely fall if
- A. The population falls.
  - B. The rate of economic growth falls.
  - C. The rate of economic growth is less than the rate of population growth.
- D.
- There is a decrease in the size of the working population.
19. Per capita GDP will definitely rise if
- A. The population falls and GDP does not fall.
  - B. The rate of economic growth falls.
  - C. The rate of economic growth is less than the rate of population growth.
- D.
- There is a decrease in the size of the working population.
20. If population growth is less than output growth for a country,
- A. Real GDP has decreased.
  - B. Average living standards will decrease.
  - C. GDP must have fallen at a fairly rapid rate.
  - D. The per capita living standard will increase.
21. If output growth exceeds population growth for a country,
- A. Average living standards will increase.
  - B. GDP must have fallen at a very rapid rate.
  - C. Per capita GDP will decrease.
- D.
- This country must have overcome the problem of opportunity costs.
22. Economic growth
- A. Is an increase in output or real GDP.
  - B. Causes a contraction in the production possibilities curve.
  - C. Involves reduced capacity in the short run.
  - D. None of the choices are correct.
23. On average, since 1900 U.S. output has grown roughly \_\_\_\_ times faster than population growth.
- A. 5
  - B. 4
  - C. 3
  - D. 2
24. On average, since 1900 the population of the United States has grown by roughly \_\_\_\_ percent per year.
- A. 9
  - B. 6
  - C. 3
  - D. 1
25. On average, since 1900 U.S. output has grown by roughly \_\_\_\_ percent per year.
- A. 9
  - B. 6
  - C. 3
  - D. 1
26. Which of the following countries experienced a decline in total output from 2000 to 2009?
- A. Canada.
  - B. Zimbabwe.
  - C. China.
  - D. Burundi.

27. Which of the following countries had the highest average growth rate for per capita GDP from 2000 to 2009?
- A. Canada.
  - B. Haiti.
  - C. China.
  - D. Burundi.
28. The current U.S. economy is based primarily on the production of
- A. Agricultural goods.
  - B. Goods for federal government use.
  - C. Manufacturing goods.
  - D. Services.
29. As the U.S. economy relies more and more heavily on the production of services rather than goods,
- A. GDP will decrease since there will be less real production.
  - B. International trade will become more difficult.
  - C. Mass unemployment will result.
  - D. Nearly all future job growth will be in service-producing industries.
30. Which of the following is considered a service in the calculation of GDP?
- A.
    - Manufacturing reclining chairs.
  - B.
    - Constructing new homes.
  - C. Tax preparation.
  - D.
    - Manufacturing automobiles.
31. Differences in size of real GDP across countries are best explained by
- A. Population growth.
  - B. Human capital.
  - C. Large farming sector.
  - D. None of the choices are correct.
32. Which of the following has been a century-long trend in the United States?
- A. Decline of total value of world trade.
  - B. Relative increase in farming to manufacturing.
  - C. Relative decline in manufacturing to the service sector.
  - D. Relative decline in service sector to manufacturing.
33. Which of the following contains the two sectors whose percentage contribution to the real GDP has declined since 1900?
- A. Farming and manufacturing.
  - B. Manufacturing and exports.
  - C. Farming and services.
  - D. Services and exports.
- 34.
- During the past 100 years, the United States has transformed into primarily
- A. A manufacturing economy.
  - B. A closed economy with little foreign trade.
  - C. An agricultural economy.
  - D. A service economy.
35. To an economist, the four factors of production are
- A. Labor, workers, profit, and services.
  - B. Land, labor, capital, and entrepreneurship.
  - C. Entrepreneurship, machinery, workers, and profit.
  - D. None of the choices are correct.

36.

The 'WHAT goods and services does the US produce' question can best be answered using data about which of the following?

A.

The distribution of output in markets, specifically among manufacturing, services, and agricultural sectors.

B. Per capita GDP.

C. Productivity.

D. The distribution of GDP among different income quintiles.

37. As of the year 2000, services accounted for what percentage of total U.S. output?

A. 25 percent.

B. 50 percent.

C. 80 percent.

D. 90 percent.

38. As of the year 2000, manufacturing, mining, and construction accounted for what percentage of total U.S. output?

A. 15 percent.

B. 19 percent.

C. 28 percent.

D. None of the choices are correct.

39. As of the year 2000, agriculture accounted for what percentage of total U.S. output?

A. 1 percent.

B. 5 percent.

C. 8 percent.

D. None of the choices are correct.

40. Which component(s) of U.S. real GDP decreased in size relative to total U.S. real GDP from 1950 to 2000?

A. Only agriculture.

B. Only manufacturing.

C. Agriculture and manufacturing.

D. Only services.

41. Which component(s) of U.S. real GDP increased in size relative to total U.S. real GDP from 1950 to 2000?

A. Only agriculture.

B. Only manufacturing.

C. Agriculture and manufacturing.

D. Only services.

42. According to the World View chart in the text, from highest to lowest real GDP, which is correct?

A. United States, Japan, China, Germany, Britain.

B. United States, China, Japan, Germany, Russia.

C. United States, China, Japan, Germany, Britain.

D. United States, China, Germany, Japan, Canada.

43. According to the World View chart in the text, from highest to lowest real GDP per capita, which is correct?

A. United States, Japan, France, Canada, China.

B. United States, China, Japan, Germany, Russia.

C. United States, Canada, Japan, France, South Korea.

D. United States, China, India, Jordan, Germany, Japan, Russia.

44. As of 2010, per capita GDP in the United States was approximately how many times the world average?

A. 3.

B. 5.

C. 7.

D. 9.

45. As of 2010, per capita GDP in the United States was approximately

A. \$26,000.

B. \$37,000.

C. \$47,000.

D. None of the choices are correct.

46. A capital-intensive production process is one that
- Has a high ratio of labor to capital.
  - Has a high ratio of capital to labor.
  - Is used only in the United States.
  - All of the choices are correct.
47. A labor-intensive production process is one that
- Has a low ratio of labor to capital.
  - Has a low ratio of capital to labor.
  - Is used only in the United States.
  - All of the choices are correct.
48. The United States has a larger real GDP than China because
- The U.S. population is smaller but works in capital-intensive jobs.
  - The U.S. population is smaller but works in labor-intensive jobs.
  - The U.S. population is larger but works in capital-intensive jobs.
  - The U.S. population is larger but works in labor-intensive jobs.

49.

As a country's human capital capacity increases, we observe that the relative number of

- Labor-intensive production processes increases.
  - Capital-intensive production processes increases.
  - Sector service jobs decreases.
  - None of the choices are correct.
50. Regarding increasing productivity, factor mobility is
- Important in that it helps to fix a stable labor-intensive production process.
  - Important in that it helps to fix a stable capital-intensive production process.
  - Important in that it helps to reallocate resources in a dynamic economy.
  - Not important in either a stable or dynamic economy.
51. Factor mobility aids in economic development when
- A region suffers a natural disaster such as an earthquake or tornado.
  - A technological advance causes some firms to go out of business.
  - There is an increase in both outsourcing and insourcing.
  - All of the choices are correct.
52. How will an increase in factor mobility, *ceteris paribus*, affect an economy's production possibilities curve?
- Shift the curve inward.
  - Result in a movement from outside the curve to a point on the curve.
  - Shift the curve outward.
  - Result in a movement along the curve.
53. How will a decrease in technology from a natural disaster such as a hurricane, *ceteris paribus*, affect an economy's production possibilities curve?
- Shift the curve inward.
  - Result in a movement from inside the curve to a point on the curve.
  - Shift the curve outward.
  - Result in a movement along the curve.
54. A U.S. firm that outsources jobs would be
- Building a factory in Canada and hiring Canadian workers.
  - Buying raw materials from a Chinese firm instead of a U.S. firm.
  - Buying computers assembled in Mexico that used U.S. parts.
  - All of the choices are correct.
55. Although the necessary role of government in the economy is highly debated, many people agree that it should
- Provide a legal framework.
  - Protect the environment.
  - Protect consumers and labor.
  - All of the choices are correct.

56. In providing a legal framework, the government
- A. Protects patents to encourage entrepreneurship.
  - B. Protects copyrights to encourage textbook protection.
  - C. Protects the ownership of private property to encourage the private sector.
  - D. All of the choices are correct.
57. When the government provides a legal framework,
- A. Private market transactions suffer and government market transactions suffer.
  - B. Private market transactions suffer and government market transactions benefit.
  - C. Private market transactions benefit and government market transactions benefit.
  - D. None of the choices are correct.
58. When the government provides a legal framework,
- A. Domestic market transactions suffer and foreign trade market transactions suffer.
  - B. Domestic market transactions benefit and foreign trade market transactions benefit.
  - C. Domestic transactions benefit and foreign market transactions suffer.
  - D. None of the choices are correct.
59. The term *externalities* refers to
- A. Only positive benefits of a market activity borne by a third party.
  - B. Only negative costs of a market activity borne by a third party.
  - C. The negative costs and positive benefits of a market activity borne by a third party.
  - D. None of the choices are correct.
60. An example of a positive externality is
- A. Increased factory use of private sector robotics that came from government research.
  - B. Increased health problems from air pollution.
  - C. Increased business profits at a hardware store that benefited from a tornado.
  - D. None of the choices are correct.
61. The government regulates monopolies in order to
- A.
    - Ensure that product quality meets minimum standards, such as testing of new drugs.
  - B. Prohibit mergers or acquisitions that would lessen competition.
  - C. Protect consumers from false advertising.
  - D. All of the choices are correct.
62. The government intervenes in the economy to protect labor by
- A.
    - Enforcing child labor laws to prevent child exploitation.
  - B. Ensuring workplace safety conditions.
  - C. Ensuring minimum wages in addition to overtime provisions.
  - D. All of the choices are correct.
63. According to economists, which of the following is NOT a factor of production?
- A. Land.
  - B. Labor.
  - C. Money.
  - D. Entrepreneurship.
64. An example of human capital would be
- A. A computer.
  - B. Carpentry skills.
  - C. A carpenter's saw.
  - D. All of the choices are correct.
65. The term *factor of production* refers to
- A. Only those goods that are produced and then used to produce other goods and services.
  - B. Labor only.
  - C.
    - Any resource input used to produce goods and services.
  - D. Factories and machinery only.

66. Human capital is defined as the
- Amount of machinery, factories, and buildings an individual owns.
  - Dollar value of all the stocks and bonds an individual owns.
  - Knowledge and skills workers possess.
  - None of the choices are correct.
67. How will an increase in the level of human capital, *ceteris paribus*, affect an economy's production possibilities curve?
- Shift the curve inward.
  - Result in a movement from inside the curve to a point on the curve.
  - Shift the curve outward.
  - Result in a movement along the curve.
68. As a nation's average education level increases, the nation's level of productivity
- Increases, and the production possibilities curve shifts to the right.
  - Decreases, and the nation's production possibilities curve shifts to the left.
  - Increases, and the nation moves to a new point on the same production possibilities curve.
  - Decreases, and the nation moves to a new point on the same production possibilities curve.
69. Which of the following will increase the level of human capital in an economy?
- An increase in land mass.
  - An increase in literacy rates.
  - An increase in factory capacity.
  - A decrease in the population.
70. In terms of an economy's production possibilities curve, a decrease in the level of human capital, *ceteris paribus*, will cause
- An inward shift of the curve.
  - A movement from the curve to a point inside the curve.
  - A movement along the curve.
  - An expansion of the curve.
71. Productivity is a measure of
- Output per unit of input.
  - Output per dollar of input.
  - Input per unit of output.
  - Input per dollar of output.
72. Productivity
- Rises when the value of output rises relative to the cost of inputs.
  - Falls when the value of output rises relative to the cost of inputs.
  - Rises when the ratio of output to input increases.
  - Falls when factors of production cost more.
73. Which of the following definitely means productivity has increased?
- More output from fewer workers.
  - Less output from fewer workers.
  - More output from more workers.
  - Less output from more workers.
74. When economists describe a production process as capital-intensive, they mean that the
- Process uses a high ratio of machinery and other capital to labor.
  - Process needs a greater emphasis on labor in order to increase productivity.
  - Capital used in the process reflects the most advanced technology.
  - Capital used in the process tends to wear out (depreciate) very rapidly.
75. Production processes that use a high ratio of capital to labor inputs are referred to as
- Labor-intensive.
  - Production-intensive.
  - Capital-intensive.
  - Factor-intensive.
76. Which of the following contributes to the high productivity of American workers?
- The labor-intensive production process in the United States.
  - The abundance of capital relative to labor.
  - The low level of factor mobility.
  - The decreasing investment in human capital.

77. Which of the following is likely to be most capital-intensive?
- A. Farming in developing countries.
  - B. Production of clothing in rural China.
  - C. Oil refining in the United States.
  - D. None of the choices are correct.
78. The investment in human capital through education and training can result in
- A. Greater productivity.
  - B. Low factor mobility.
  - C. Less capital-intensive production.
  - D. Reduced output per labor hour.
79. *Factor mobility* refers to
- A. Technological change in the use of capital.
  - B. The ease of reallocating resources.
  - C. Technological change in the use of labor.
  - D. The increase in labor productivity.
80. When workers move from one industry to another in response to demand changes, this is an example of
- A. Factor quality.
  - B. Factor mobility.
  - C. Capital stock.
  - D. The decreasing investment in human capital.
81. One characteristic that has allowed the U.S. economy to change the mix of output in response to consumer demand is the
- A. Factor mobility which is the increased ease with which resources move from one industry to another.
  - B. Abundance of scarce resources.
  - C. Large number of proprietorships.
  - D. Labor-intensive production process.
82. Whenever technology advances, an economy can produce more output with
- A. Fewer resources.
  - B. More resources.
  - C. Current resources.
  - D. No resources.
83. Which of the following does *not* contribute to the high productivity of the U.S. economy?
- A. The capital stock.
  - B. Factor mobility.
  - C. Negative externalities.
  - D. Technology.
84. Which of the following will contribute to accelerated growth for the U.S. economy?
- A. A decrease in factor mobility.
  - B. A decrease in government involvement in copyright laws.
  - C. Increased use of outsourcing for inputs and increased use of comparative advantage for trade in final goods and services.
  - D. A decrease in tax credits for research and development.
85. Outsourcing leads to
- A. Increases in productivity and increases in total output.
  - B. Increases in productivity and decreases in total output.
  - C. Decreases in productivity and increases in total output.
  - D. Decreases in productivity and decreases in total output.

86. Outsourcing leads to
- A. Increases in total output, but with temporary job losses for some domestic workers.
  - B. Increases in total output, but with permanent job losses for some domestic workers.
  - C. Decreases in total output, but with no changes in the number of domestic jobs available.
  - D. Decreases in total output, along with permanent job losses for some domestic workers.
87. Which of the following would be a legitimate government activity in the U.S. economy?
- A.
- The enactment of antitrust laws to protect consumers.
- B. The regulation of water pollution.
- C. Enforcing child labor laws.
- D. All of the choices are correct.
88. The government establishes the rules of the game for economic transactions in order to
- A. Legitimize and enforce contracts.
  - B. Discourage the production of capital.
  - C. Discourage the ownership of property.
  - D. Encourage spillover costs.
89. The term *externalities* refers to
- A. Black-market economic activity.
  - B. The impact on markets of imported goods.
  - C. The costs or benefits of a market activity borne by a third party.
  - D. The inequitable distribution of income.
90. The cost or benefit of a market activity borne by a third party is
- A. An externality.
  - B. A government directive.
  - C. A monopoly.
  - D. Black-market economic activity.
91. Which of the following is an example of an external cost?
- A. Unemployment.
  - B. Unfair pricing behavior by a monopoly.
  - C. Automobile exhaust fumes.
  - D. Poverty.
92. When the production of a good creates external costs,
- A. Profits for the producer of the good will be lower.
  - B. Production of the good will be lower.
  - C. Society's collective well-being will be lower.
  - D. The level of environmental pollution will be lower.
- 93.
- Goods that have spillover costs affect our collective well-being and therefore can be overproduced because
- A. The government has failed to establish rules for contracts.
  - B. Most businesses are more concerned about profits than how the environment is affected.
  - C. The government has failed to enforce contract provisions.
  - D. The government is concerned about broad economic welfare.
94. Government intervention to reduce the level of pollution is prompted by the existence of
- A. An inequitable distribution of income.
  - B. Negative externalities.
  - C. A monopoly.
  - D. Government failure.
95. The government regulates food additives
- A. To keep food producers from dominating their markets.
  - B. To restrain the market power of food producers.
  - C. To assess their safety.
  - D. To prevent externalities.

96. A monopoly exists when
- A. A small number of firms are the only producers of a good.
  - B.  
A large number of firms are producing a good.
  - C. The government intervenes on behalf of consumers.
  - D.  
One firm produces all the output for a particular good or service.
97. When unregulated monopolies exist,
- A. Prices tend to be higher than with a competitive market.
  - B. Quality tends to be higher than with a competitive market.
  - C. Production tends to be higher than with a competitive market.
  - D. Externalities occur.
98. The purpose of antitrust policy in the United States is to
- A. Encourage competition among producers.
  - B. Check the validity of advertising claims.
  - C. Determine drug safety and performance.
  - D. Encourage business mergers and acquisitions.
99. In a market economy with no government intervention, the HOW to produce question is based on
- A. Production costs alone.
  - B. Production costs plus environmental considerations.
  - C. Environmental considerations only.
  - D. Consumer demand.
100. The result of government intervention in the market is that
- A. Society is always better off.
  - B. The production possibilities curve always shifts outward.
  - C.  
Society could be made better or worse off.
  - D. Society is always worse off.
101. Which of the following statements about the way markets allocate resources is most accurate from society's perspective?
- A. The market always allocates resources in the best way.
  - B.  
The market may not always allocate resources in a way that is not in society's best interest.
  - C. Resource allocation by markets may not be perfect, but it is always better than government allocation of resources.
  - D. Markets always fail to allocate resources properly, so we must rely on the government to determine the proper use of our resources.
102. The bottom 80 percent of the families in the United States receive approximately \_\_\_\_\_ percent of total income.
- A. 10
  - B. 20
  - C. 50
  - D. 90
103. The theory of how to grow GDP is
- A. An equity concept while the theory of how to divide GDP is an equity concept.
  - B. An equity concept while the theory of how to divide GDP is an efficiency concept.
  - C. An efficiency concept while the theory of how to divide GDP is an equity concept.
  - D. An efficiency concept while the theory of how to divide GDP is an efficiency concept.

104.

Income inequality tends to be greatest in

- A. Poorest countries.
- B. Middle-income countries.
- C. Richest countries.
- D. None of the choices are correct.

105. A country that increased its literacy rate and thereby its average human capital would probably

- A. Decrease GDP.
- B. Increase GDP.
- C. Have not impact on GDP.
- D. None of the choices are correct.

106. A rich country that opened its borders to trade with a poor country would cause in the long run

- A. Increased GDP for the rich country but not the poor country.
- B. Increased GDP for the rich country and the poor country.
- C. Increased GDP for the poor country but not the rich country.
- D. None of the choices are correct.

107. A rich country that opened its borders to trade with a poor country would cause in the long run

- A. More equitable distribution of income GDP for the rich country but not the poor country.
- B. More equitable distribution of income GDP for the poor country but not the rich country.
- C. More equitable distribution of income GDP for the rich country and the poor country.
- D. None of the choices are correct.

108.

As of 2013, to be in the top quintile for income distribution in the United States, a family needed in income at least

- A. \$52,000.
- B. \$85,000.
- C. \$106,000.
- D. \$140,000.

109. As of 2010, to be in the bottom quintile for income distribution in the United States, a family needed in income no more than

- A. \$15,000.
- B. \$21,000.
- C. \$27,000.
- D. \$35,000.

110. As of 2010, for income distribution in the United States, the minimum family earnings in the top quintile were approximately \_\_\_\_\_ times the maximum family earnings in the bottom quintile.

- A. 3
- B. 5
- C. 7
- D. 10

111. A laissez faire economy
- A. Relies predominantly on government policy rather than free market action.
  - B. Relies predominantly on free market action rather than government policy.
  - C. Relies equally on government policy and free market action.
  - D. None of the choices are correct.
112. The income distribution of the United States is basically the nation's answer to the
- A. WHAT question.
  - B. HOW question.
  - C. FOR WHOM question.
  - D. WHAT, HOW, and FOR WHOM questions.
113. Which of the following statements is true concerning income inequality?
- A. Income is equally distributed in poor countries.
  - B. Developed countries have greater income inequality than developing countries.
  - C. The government has no way to alter income inequality.
  - D. The free market produces an unequal distribution of income.
114. One-fifth of the population, rank ordered by income, is
- A. A population quintile.
  - B. An income quintile
  - C. An earnings-population quintile.
  - D. None of the choices are correct.
115. The richest 20 percent of the families in the United States receive approximately \_\_\_\_\_ percent of total income.
- A. 10
  - B. 20
  - C. 50
  - D. 90
116. The 20 percent of families with the lowest income in the United States receive approximately \_\_\_\_\_ percent of total income.
- A. 1
  - B. 3
  - C. 15
  - D. 20
117. When compared to the average household in most low-income countries, poor people in the United States receive
- A. About the same amount of goods and services.
  - B. Somewhat fewer goods and services.
  - C. Far fewer goods and services.
  - D. Far more goods and services.
118. Income inequality is
- A. Often greatest in the richest countries.
  - B. An issue because households in the lowest quintile receive more than their share of income.
  - C. Often greatest in the poorest countries.
  - D. Not an issue in the United States because of the redistribution of income through the federal tax system.
119. Income inequalities are greatest in
- A. Highly developed countries.
  - B. Poor countries.
  - C. Rich countries.
  - D. Countries with many factors of production.
120. According to the World View titled "Income Share of the Rich," in which of the following would the top tenth of the population be most likely to receive the highest percentage of the country's income?
- A. Namibia.
  - B. South Africa.
  - C. Canada.
  - D. Japan.

121. According to the World View titled "Income Share of the Rich," in which of the following would the top tenth of the population be most likely to receive the highest percentage of the country's income?
- A. Japan.
  - B. The United States.
  - C. Germany.
  - D. Haiti.
122. According to the World View excerpt that compares GDP figures for several nations, Japan's real GDP is approximately
- A. Second only to that of the United States.
  - B. More than that of China.
  - C. More than that of Germany.
  - D. All of the choices are correct.
123. According to the World View excerpt that compares GDP figures for several nations, Russia's real GDP is approximately
- A. More than that of Germany.
  - B. More than that of China.
  - C. More than that of South Korea.
  - D. None of the choices are correct.
124. The World View article titled "The Education Gap between Rich and Poor Nations" says that 85 percent of all Americans graduate from high school. This is an example of
- A. The inequitable distribution of income.
  - B. A negative externality.
  - C. Investment in human capital.
  - D. Capital-intensive production.
125. The World View article titled "The Education Gap between Rich and Poor Nations" says that a greater percentage of people graduate from high school in rich nations than in poor nations. This investment in human capital can lead to
- A. Lower productivity.
  - B. Increased output per worker.
  - C. Lower labor quality.
  - D. A bigger capital stock.
126. The World View article in the text titled "Income Share of the Rich" reports, "In poor, developing countries the richest tenth of the population typically gets 40 to 50 percent of all income." Which of the following is a form of government intervention designed to change this situation?
- A. Antitrust laws.
  - B. Spillover costs.
  - C. Laissez faire.
  - D. Rich nations opening up their domestic markets to exports from poor nations.
127. In the United States today, nearly \_\_\_\_\_ of the population has attained a college degree.
- A. 30 percent
  - B. 15 percent
  - C. 50 percent
  - D. 40 percent
128. The role of the government in establishing how private business can operate includes all of the following except
- A. Providing a legal framework.
  - B. Providing raw materials to business.
  - C. Protecting the environment.
  - D. Protecting consumers from defective products.
129. According to the World View article that compares GDP per capita figures for several nations, which of the following nations has the highest GDP per capita?
- A. Japan.
  - B. Great Britain.
  - C. United States.
  - D. China.

130. Externalities measure
- A. Only costs of a market activity borne by a third party.
  - B. Only benefits of a market activity borne by a third party.
  - C. Either costs or benefits of a market activity borne by a third party.
  - D. None of the choices are correct.
131. Over many years the capital stock in the United States has grown to approximately
- A. \$50 trillion.
  - B. \$40 trillion.
  - C. \$30 trillion.
  - D. \$20 trillion.
132. The GDP is a measure of the market value of all final goods and services produced in the economy in a given time period.  
True False
133. The GDP of the United States includes production by foreign-owned firms that are located  
in the United States. True False
134. The standard of living rises when population growth  
exceeds economic growth. True False
135. The relative decline in goods production compared to services produced means that we're  
producing fewer goods than in earlier decades.  
True False
136. On average over the last century, the U.S. population has grown three times as fast  
as the U.S. real GDP. True False
137. A good approximation of a country's standard of living is per capita GDP, which is population  
divided by real GDP. True False
138. According to the World Bank, nearly one-third of the people on earth subsist on incomes of  
less than \$2 per day. True False
139. In the years from 2000 through 2009, China's standard of living or per capita GDP grew  
faster than that of the United States.  
True False
140. Education and training are examples of  
investment in human capital. True False
141. The high productivity of the U.S. economy results from using highly educated workers  
in a capital-intensive production process.  
True False
142. Outsourcing is a source of  
increased U.S. output.  
True False
143. Government intervention is sometimes used to reduce the external  
costs of production.  
True False
144. Monopolists can dictate the price or the quantity of the product they  
produce, but not both.  
True False
145. The richest fifth of U.S. households get nearly  
half of all U.S. income.  
True False

146. Income inequalities are often greatest in the poorest countries.

True False

147. How is per capita GDP calculated, and what does it tell us about the economy?

148. How is per capita GDP affected by GDP growth and population growth?

149. Compare the composition of U.S. output in the year 1900 with its composition in the year 2000.

150. What are externalities, and how do they affect who pays the true cost of a polluting factory?

151. What factors contribute to the high level of productivity of the American worker?

152. What is human capital, and how does it affect U.S. productivity?

# Chapter 02 Test Bank Key

1. Approximately how much of the world's output does the United States produce?

- A. 5 percent.
- B.** 17 percent.
- C. 30 percent.
- D. 12 percent.

The United States is a very significant force in the world economy.

40. Which component(s) of U.S. real GDP decreased in size relative to total U.S. real GDP from 1950 to 2000?
- A. Only agriculture.
  - B. Only manufacturing.
  - C.** Agriculture and manufacturing.
  - D. Only services.

Although agriculture, along with manufacturing, mining, and construction, are important parts of our economy, their relative size in U.S. real GDP has shrunk significantly since World War II.

Topic: WHAT AMERICA PRODUCES

41. Which component(s) of U.S. real GDP increased in size relative to total U.S. real GDP from 1950 to 2000?
- A. Only agriculture.
  - B. Only manufacturing.
  - C. Agriculture and manufacturing.
  - D.** Only services.

Due to technological advances, the agricultural component of U.S. real GDP has shrunk significantly, and with the significant increase in per capita income the demand for services has increased.

139. In the years from 2000 through 2009, China's standard of living or per capita GDP grew faster than that of the United States.

**TRUE**

Regarding the per capita GDP, the numerator (real GDP) grew faster and the denominator (population) grew more slowly for China than for the United States. In essence, China had a larger quotient and thereby larger growth in its standard of living.

Learning Objective: 02-01 The relative size of the U.S. economy.  
Topic: WHAT AMERICA PRODUCES

140. Education and training are examples of investment in human capital.

**TRUE**

Human capital leads to greater productivity as workers are able to use more productive physical capital.

Learning Objective: 02-03 How the U.S. is able to produce so much output.  
Topic: HOW AMERICA PRODUCES

141. The high productivity of the U.S. economy results from using highly educated workers in a capital-intensive production process.

**TRUE**

Greater use of physical capital leads to higher productivity of workers.

Topic: HOW AMERICA PRODUCES

142. Outsourcing is a source of increased U.S. output.

**TRUE**

Outsourcing allows greater specialization and therefore higher living standards.

Learning Objective: 02-03 How the U.S. is able to produce so much output.  
Topic: HOW AMERICA PRODUCES

143. Government intervention is sometimes used to reduce the external costs of production.

**TRUE**

Externalities will not be corrected purely by the market; some intervention of government is necessary to correct them.

Topic: HOW AMERICA PRODUCES

144. Monopolists can dictate the price or the quantity of the product they produce, but not both.

**TRUE**

With no competitors, the monopolist has much more ability to sell its product on terms favorable to the company.

Topic: HOW AMERICA PRODUCES

145. The richest fifth of U.S. households get nearly half of all U.S. income.

**TRUE**

The greatest share of income goes to the top fifth of households.

Learning Objective: 02-04 How incomes are distributed in the United States and elsewhere.  
Topic: FOR WHOM AMERICA PRODUCES

146. Income inequalities are often greatest in the poorest countries.

**TRUE**

Richer nations tend to be better at reducing income inequality than are poorer nations.

Topic: FOR WHOM AMERICA PRODUCES

147. How is per capita GDP calculated, and what does it tell us about the economy?

Per capita GDP is the dollar value of GDP divided by total population. It indicates how much output each person would get if the output were divided evenly among the population. It can be used to measure average living standards.

Learning Objective: 02-01 The relative size of the U.S. economy.  
Topic: WHAT AMERICA PRODUCES

148. How is per capita GDP affected by GDP growth and population growth?

Per capita GDP is the dollar value of GDP divided by total population. If GDP increases and population is constant, then per capita GDP will grow. If population and GDP grow at the same time, then GDP must grow at a more rapid rate than population for per capita GDP to increase. Even if GDP grows, if population grows at a more rapid rate, then per capita GDP will decline.

Topic: WHAT AMERICA PRODUCES

149. Compare the composition of U.S. output in the year 1900 with its composition in the year 2000.

At the beginning of the 1900s, about two-thirds of U.S. output consisted of farm goods, manufactured goods, and mining, whereas in the year 2000, 80 percent of U.S. output consisted of services.

Topic: WHAT AMERICA PRODUCES*

150. What are externalities, and how do they affect who pays the true cost of a polluting factory?

Externalities are the market effects felt either beneficially or detrimentally by third parties in a market exchange. Another way to look at this is that externalities are by-products affecting bystanders. An example would be when a factory gets rid of production waste more cheaply by polluting a river than by disposing of the waste in a manner that does not affect the environment. By polluting the river, the factory has a lower internal cost of production, a lower price of output, and thereby a larger quantity demanded of its product. What is not in the final price of the product is the external cost of the pollution paid by those living downstream and suffering health costs and loss of income.

*Learning Objective: 02-03 How the U.S. is able to produce so much output.  
Topic: HOW AMERICA PRODUCES*

151. What factors contribute to the high level of productivity of the American worker?

Productivity is affected by the size of the capital stock, the quality of human capital, factor mobility, technological advance, and our ability to outsource and trade.

*Learning Objective: 02-03 How the U.S. is able to produce so much output.  
Topic: HOW AMERICA PRODUCES*

152. What is human capital, and how does it affect U.S. productivity?

Human capital is the knowledge and skills possessed by the workforce. The U.S. economy has invested heavily in human capital through education and job training. The high productivity of the U.S. economy is the direct result of the high quality of its resources, including well-educated workers.
